NOV 13 1972

REFER TO

MCB 483.52 L
020956

020956

Dear

Your letter of June 1, 1972, further concerns the tariff classification of your paper product known as Storalene. Based upon the information which you gave us in your letter of November 30, 1971, and samples submitted with that letter, Storalene sample No. 1a if produced on the usual conventional type of complete papermaking machine was classified under the provision for other papers not specially provided for, weighing over 9 but not over 18 pounds per ream (432,000 square inches), not impregnated, not coated, not surface-colored, not lined, not printed, and not decorated, in item 252.79, Tariff Schedules of the United States (TSUS), presently dutiable at the rate of 0.5 cent per pound plus 2 percent ad valorem.

You now state that Storalene is based on woodpulp and short rayon fibers and is made on a papermaking machine; before the web enters the drying end, it is saturated with a binder which usually is latex. This binding agent is said to completely penetrate the sheet. You suggest tariff classification under the provision for other papers not specially provided for, impregnated, coated, or both, but not otherwise treated, in item 254.80, TSUS, presently dutiable at the rate of 1 cent per pound plus 2 percent ad valorem.

When a binder such as latex is applied while the web is being formed on the papermaking machine, or if the binder is blended in the furnish from which the paper is formed on the paper making machine, the resultant paper if represented by tne submitted samples is classifiable under the provision for other papers weighing over 18 pounds per ream, not impregnated, in item 252.90, TSUS, and dutiable at the rate of 10 percent ad valorem.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

A3

When the binding agent is applied to the web of paper after the web is formed on the papermaking machine, before the web enters the dryer of the machine, the binding agent saturates the web. The resultant paper is classifiable under the provision for other papers, not specially provided for, impregnated, coated, or both, but not otherwise treated, in item 254.80, TSUS, and dutiable at the rate of 1 cent per pound plus 2 percent ad valorem.

Storalene represented by the submitted samples is classifiable according to the method whereby the binding agent is applied, either in item 252.90, TSUS, or in item 254.80, TSUS.

The ruling contained in Bureau letter MCB 483.52, February 28, 1972, is hereby modified to be in agreement with the ruling expressed in this letter.

Sincerely yours,

James M. O'Neil

ACTING Director
Division of
Classification and Value

REFER TO
CLA-2:R:CV:MA
037037 WIS

Dear Mr.

In your letters dated October 23, 1974 and February 18, 1975, you inquire as to the tariff status of various containers. We assume that the containers are products of a country entitled to column 1 rates of duty.

The containers are described and classifiable as follows: Item (A) is a three sided steel container with an open top. The importer states that Item (A) can only be used for transporting compressed air tanks. If Item (A) is chiefly used for transporting compressed air tanks, it would be classifiable under the provision for containers chiefly used for transporting, other, in item 640.30, Tariff Schedules of the United States (TSUS), with duty at a rate of 5 percent ad valorem. However, if Item (A) is not chiefly used as forementioned, then item 657.20, TSUS, would be applicable with duty at a rate of 9.5 percent ad valorem.

Item (B) is a four sided steel container with a door for inserting a drum, and a hasp for a padlock. The importer states that Item (B) is not normally transported anywhere, but rather, it holds the drum until the drum is filled and removed from the container. If Item (B) is chiefly used as forementioned then it would be classifiable under the provision for articles of iron or steel, not coated or plated with precious metal, other articles, other, in item 657.20, TSUS, with duty at a rate of 9.5 percent ad valorem.

Item (C) is a four sided steel container. It is equipped with a foot/skid attachment which permits the container to be raised for dumping. It is not stated as to whether the container has a mechanical lifting device as a integral part of the container. If Item (C) does have a mechanical

TO THE

AS

REPLY TO COMMISSIONER OF CUSTOMS, WASHINGTON, D.C. 20229

lifting device as an integral part, then it would be classifiable under the provision for lifting, handling, machinery, in item 664.10, TSUS, with duty at the rate of 5 percent ad valorem. However, if Item (C) does not contain a mechanical lifting device, then item 657.20, TSUS, would be applicable with duty at a rate of 9.5 percent ad valorem.

Sincerely yours,

Arthur P. Schaffner

UNITED STATES GOVERNMENT

Memorandum

DEPARTMENT OF THE TREASURY
UNITED STATES CUSTOMS SERVICE

DATE: JUL 19 1976

FILE: CLA-2:R:CV:MC
045639 BS

TO : District Director of Customs
Minneapolis, Minnesota 55401

FROM : Director, Classification and Value Division

SUBJECT: Internal Advice Request No. 38/76, concerning the tariff classification of "Gold stamps".

This is in reply to Internal Advice Request No. 38/76, initiated by [redacted] on behalf of [redacted] St. Paul, Minnesota, concerning the tariff classification of 23-karat gold "postage stamps" issued under the authority of the Island of Staffa, Scotland. A sample "stamp", "first day cover", promotional literature, and Catalogue of British Local Stamps were submitted. Although not specifically marked on the "stamps", the country of origin is indicated to be the United Kingdom.

The submitted sample "stamps" (the single mint "stamp" and the cancelled stamp on the "first day cover") are relatively flat rectangles of metallic, gold-colored foil, stated to be of 23-karat gold, and backed with an adhesive coating which in turn is protected by a release paper. The samples are "pressure sensitive" as defined in Headnote 2, Subpart A, Part 13, Schedule 7, Tariff Schedules of the United States (TSUS). The articles measure approximately 2 inches by 1-1/2 inches by .007 inch (including the paper backing). The backing paper is approximately .0025 inch thick. The articles, including backing paper, weigh approximately .3409 gram and are perforated at approximately 10 perforations per inch (8 perforations per 2 centimeters).

The "stamps" have been embossed to indicate that they are "postage" of "STAFFA SCOTLAND", are of "23K GOLD", and are of 6 pounds face value (approximately $11.00). Dominating the center of each "stamp" is an embossed design. One design is stated to be the seal of New Jersey; the other, of Pennsylvania. No ink or other processes commonly used in the printing industry were employed in the creation of the "stamps".

It is the contention of the inquirer that the submitted samples are classifiable either under the provision for postage and revenue stamps, cancelled or not cancelled, and Government stamped envelopes and postal cards bearing

045639

A7

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

paperboard not specially provided for, in item 256.90, TSUS. Had the prints in that decision been manufactured by using a printing process they would have been classified under one of the more specific provisions for printed matter. Although we have found no recent court cases stating that embossing is not a form of printing, the above evidence reasonably suggests that embossing is not a form of printing included within Headnote 1, Part 5, Schedule 2, TSUS.

In T.D. 66-17(ii), 101 Treas. Dec. 59 (1966), and in Headquarters letters 035992LXL dated December 19, 1974, 039287 dated April 11, 1975, 039904 dated June 10, 1975, and 043824LXL dated February 4, 1976, we ruled that metal replicas of postage stamps, which were issued by a recognized government and which may have been of interest to collectors, were classifiable under the provision for articles of gold, including rolled gold, in item 656.10, TSUS. The articles in those cases were not constructed and had no provisions for attaching them to mail, and could not be construed as constituting postage in any sense. Although different in some respects from the merchandise involved in the above-cited cases, it is our opinion that the similarities in construction (as stamped metal objects) and function (as collector's items) of the submitted merchandise to the replicas previously ruled upon do not alter the nature or the classification of the merchandise. In this regard, please note that all materials with pressure sensitive backing are not classifiable under the provision for pressure sensitive sheets, strips, tapes, monograms, and other pressure sensitive flat shapes or forms, in item 790.55, TSUS. (See ORR 289/71 classifying sheets of pressure sensitive cork wall panelling under the provision for articles not specially provided for, of cork, in item 220.50, TSUS, and Headquarters letter 018509, SP511.4 dated March 10, 1972, in which pressure sensitive, printed paper labels were found classifiable under the provision for printed paper labels, not printed in whole or in part by a lithographic process, in item 274.35, TSUS.)

The submitted "stamps" were neither issued nor have they been recognized by a government. They are not and never were intended to be used as postage. They are classifiable under the provision for articles of gold, including rolled gold, in item 656.10, TSUS.

You may furnish the inquirer with a copy of this memorandum.

047377

Dear

In your letter of August 25, 1976, you inquire as to the dutiable status of heating units and control units for saunas. Descriptive literature was submitted for examination.

The descriptive literature indicates that Tylo sauna heating units consist of metal box containers that hold rocks which are heated by an electric element. If imported separately or if imported with a control panel, the sauna heating unit is classifiable as other furnaces, heaters, and ovens, and parts thereof, in item 684.40, Tariff Schedules of the United States (TSUS), and dutiable at the column 1 rate of 5 percent ad valorem and the column 2 rate of 35 percent ad valorem.

If imported separately, the electric control panels are probably classifiable as control panels, in item 685.90, TSUS, and dutiable at the column 1 rate of 8.5 percent ad valorem and the column 2 rate of 35 percent ad valorem. In order for us to provide you with a binding ruling as to the dutiable status of these panels, you should furnish us a full and complete description of the control panels in their condition as imported into the United States.

Articles manufactured in designated beneficiary developing countries which are classifiable in items 684.40 and 685.90, TSUS, are entitled to duty-free entry provided they otherwise qualify for this preferential status in accordance with regulations promulgated by the Secretary of the Treasury pursuant to the Generalized System of Preferences. Enclosed is a copy of General Headnote 3, TSUS, which lists those countries that are designated beneficiary developing countries and those countries whose products are dutiable at column 2 rates.

Sincerely yours,

Salvatore E. Caramagno

New York Seaport, New York 10048

Director, Classification and Value Division

Internal Advice Request No. 38/76, concerning the tariff classification of "Gold Stamps"

This is in reply to your memorandum dated August 26, 1976, by the Assistant Area Director, Classification and Value, New York Seaport, New York, concerning the tariff classification of 23-karat gold "postage stamps" issued under the authority of the Island of Staffa, Scotland. Two sample "stamps" and "first day cover" were submitted. Although not specifically marked on the stamps, the country of origin is indicated to be the United Kingdom.

The submitted sample stamps are pressure sensitive rectangles of metal, stated to be 23-karat gold, and backed with an adhesive coating which in turn is protected by a release paper. Headnote 2, Subpart A, Part 13, Schedule 7, Tariff Schedules of the United States (TSUS), states that, "the term pressure-sensitive as used in items 740.50 and 740.55 refers to articles which have an adhesive coating on one or both surfaces that will adhere to other surfaces upon the application of pressure only."

The samples measure approximately 2 inches by 1-1/2 inches by .007 inches (including the paper backing). The backing paper is perforated at approximately 10 perforations per inch. A laboratory analysis determined that the stamp weighed 0.351 grams and its composition by weight to be as follows:

adhesive	13.0%
paper backing	34.1%
paper (w/backing and gold removed)	38.7%
gold	10.0%

Information received from the Minneapolis field office indicates the samples constitute part of a commemorative set consisting of 41 stamps, of which approximately half do not fit the definition of pressure sensitive. The stamps have been enclosed to indicate that they are "postage" of "Staffa Scotland," are of "23-Karat Gold "and

A10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

are of 6 pounds face value (approximately $11). Dominating the center of each stamp is an embossed design which includes the 13 original colonies, 23 flags of various nations, a Betsy Ross stamp, mothers' day stamp, fathers' day stamp, half-dollar stamp and Independence Hall stamp. No ink or other processes commonly used in the printing industry were employed in the creation of the stamps.

In a prior Internal Advice 38/76, date July 19, 1976, this office determined that the commemorative stamps presently under consideration were not classifiable under the provision for postage and revenue stamps, cancelled or not cancelled, in item 274.40, TSUS, and subject to duty-free entry; but were properly classifiable as articles of precious metal, gold, in item 656.10, TSUS, and dutiable at a rate of 20 percent ad valorem.

You contend that this merchandise is classifiable under the provision for sheets, strips, tapes, stencils, monograms, and other flat shapes or forms, which are pressure sensitive, with or without protective liners, in item 790.55, TSUS, and dutiable at a rate of 10 percent ad valorem.

The mere fact that the subject stamps possess the characteristic of being pressure sensitive is not, in and of itself, sufficient to warrant classification in item 790.55 ,TSUS. This office in several previous rulings has held that certain pressure sensitive articles were more appropriately classifiable under other provisions of the tariff schedules.

In Headquarters' letter 039287 C, dated April 11, 1975, it was determined that precious metal replicas of Olympic Commemorative stamps issued under the authority of the Canadian Government were properly classifiable under the provision for articles of precious metal, of gold, in item 656.10, TSUS, and dutiable at a rate of 20 percent ad valorem. A similar result was reached in Headquarters' letters 039404 IML, dated February 4, 1976.

In Headquarters' letter 014300 C, dated November 19, 1971, it was determined that certain pressure sensitive square decorative pieces of vinyl plastic, which were approximately 11-1/2 inches square and having a surface embossed with sixteen 2-1/2-inch squares, simulating a mosaic design were classifiable under the provision for wall coverings of plastics, not specially provided for, with or without applied adhesive, in item 772.70, TSUS.

A11

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

047388

Area Director, New York Seaport

In a decision abstracted as T.D. 66-14(11), eighteen karat gold replicas of Winston Churchill commemorative stamps were held classifiable under the provision for articles of precious metal gold, including rolled gold, in item 656.10, TSUS, and dutiable at a rate of 20 percent ad valorem.

Further, the subject embossed stamps are not flat shapes or forms, which are pressure sensitive, as set forth in item 790.55, TSUS. In United Mineral & Chemical Corp. v. United States, 63 Cust. Ct. 522, C.D. 3946 (1969), the Customs Court held that polyurethane plastic foam laminated to double-faced pressure sensitive polyvinyl chloride tape covered with a protective liner and having a sponge thickness from 1/8 inches to 3/8 inches would be excluded from classification in item 790.55, TSUS, since it was not flat within the intendment of that provision. The rationale for this decision was based on the fact that the article under consideration had a highly irregular surface, with depressions and elevations. In the Court's opinion the article, although pressure sensitive, did not possess the quality of flatness contemplated by Congress in the enactment of item 790.55, TSUS.

A similar result was reached by the Customs Court in Pedtro, Inc. v. United States, 69 Cust. Ct. 219, C.D. 4397 (1972), where certain pressure sensitive reflectors having a convex reflecting surface were excluded from classification in item 790.55, TSUS.

The explanatory notes of the Tariff Classification Study, to Schedule 7, Part 13, indicates that item 790.55, TSUS, was intended to specifically cover certain flat pressure sensitive tapes which prior to the enactment of 790.55, TSUS, were classifiable according to component material of chief value.

Websters' New World Dictionary, 2nd College Edition (1972), defines embossed as, "to carve, raise, or print (a design, etc.) so that it is raised above the surface; raised in relief." The stamps are pressure sensitive as defined by headnote 2, Subpart A, Part 13, Schedule 7, TSUS; but, are not flat shapes or forms as set forth in item 790.55, TSUS.

Based on the above we adhere to our original position that these stamps are classifiable as articles of precious metal, gold, in item 656.10, TSUS, and dutiable at a rate of 20 percent ad valorem.

JUN 12 1973

R:CV:S DAL
055545

Dear

This office has reconsidered its ruling of April 21, 1973 in the above-referenced matter and has concluded that a modification of that ruling is necessary.

In your letter of March 20, 1973, you indicate that your company is engaged in the assembly of video display terminals in Hong Kong, and that this assembly operation involves the fabrication of several printed circuit boards which are subsequently assembled with a CRT unit, power supply, cable assembly, keyboard unit, various other components and external housing. This operation produces a finished video display terminal suitable for use in various office machine applications. Focusing on the manufacture of the printed circuit boards, you state that the operations performed in Hong Kong by your company are virtually identical to those performed by the inquirer in an earlier ruling issued by this office (CLA-2-R:CV:S, 047150 RG):

1. A raw fiber glass or plastic sheet of foreign origin will be printed in Hong Kong with the required circuit diagram.

2. This sheet will be etched, cleaned and lacquered with an anti-solder resistant material, and will then be punched so that individual circuit board cases of the required sizes are formed. Holes will also be punched through the bases.

3. Electronic transistors, resistors, capacitors and diodes of foreign origin will then be "stuffed" into the pre-punched holes in the base and soldered in position. Excess leads will be cut off, and the formation of the circuit board will be complete.

055545

A13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

In our ruling of April 21, we clarified our earlier decision (i.e. 047150 RG) and held that:

> the printed circuit board is a "material produced in the beneficiary developing country (BDC)" for GSP purposes, and that its value (which consists of the value of its components--including those electronic components sourced outside Hong Kong) may be considered in determining whether the video display terminal you intend to export to the United States meets the 35 percent criteria established by the Generalized System of Preferences. (Emphasis added).

In T.D. 76-100 the Customs Service took the position that "/a/rticles produced by the joining and fitting together of components are not considered substantially transformed constituent material." Clearly, the stuffing of electronic components into prepunched holes would fit within this description, and for this reason we are compelled to reconsider our earlier decision and conclude that the electronic components sourced outside Hong Kong are not substantially transformed constituent materials of the video display terminal and that their value may not, therefore, be utilized in determining whether the GSP-imposed 35 percent test has been met. However, the imported sheets which are printed, etched, cleaned, lacquered and punched into circuit board bases are "substantially transformed constituent materials" used in the production of the video display terminal, hence, their cost value is properly includable in determining whether the 35 percent criterion has been satisfied.

Sincerely yours,

Paul L. Cinquegrana

DEPARTMENT OF THE TREASURY
U.S. CUSTOMS SERVICE
WASHINGTON

14 JUN 1979

REFER TO
R:CV:S DAL
055566

This is in reference to your letter of May 4, 1978, in which you requested a ruling as to the applicability of the Generalized System of Preferences (GSP) to stuffed, printed circuit boards produced in a beneficiary developing country (BDC). As you noted in your letter, the fact situation in this case closely resembles that which appeared in two earlier rulings issued by this office (CLA-2-R:CV:S, 047150 RG, January 18, 1977; R:CV:S DAL, 055545, April 21, 1978):

1. A raw fiber glass or plastic sheet of foreign origin is printed in Hong Kong with the required circuit diagram.

2. The sheet is then etched, cleaned, lacquered, and punched into individual circuit board bases of the required size. Holes are punched through the bases.

3. Electronic components consisting of an integrated circuit, resistors and capacitors are "stuffed" into the prepunched holes in the base, contact clips are attached and all are soldered into position. Excess leads are cut off the components. A Liquid Crystal Display (LCD) is attached to the board via a metal frame and screws. Alternatively, the LCD may be attached by a metal frame and twist tabs Most of the components that are attached to the board are not of Hong Kong origin.

055566

B1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

REPLY TO COMMISSIONER OF CUSTOMS, WASHINGTON, D.C. 20229

4. Assembly of the completed calculator now begins. First, the keys are inserted into the top housing. Next, the lens, spring and battery clip are placed in the housing. The keyboard insulator and conductive rubber dome are laid over the keys. The circuit board is inserted into the top case and attached with 4 screws. Finally, the batteries are inserted and the backplate is attached with 2 screws.

In order for an article to be eligible for duty-free treatment under GSP, the sum of (1) the cost or value of materials produced in a BDC, and (2) the direct costs of processing operations must equal or exceed 35 percent of the appraised value of the article. If the materials used to produce the eligible article are not wholly the growth, product or manufacture of the BDC, they must undergo a substantial transformation in order that they may be considered as having been "produced in the BDC" for GSP purposes. These substantially transformed constituent materials must then be used to produce the eligible article which is subsequently exported to the United States before they can be included within the 35 percent criterion set by the GSP. The question presented in this case is whether the stuffed, printed circuit board qualified as a "substantially transformed constituent material" produced in the BDC such that its cost or value is properly includable within the GSP-imposed 35 percent requirement.

Having analyzed the production processes involved in this case, we conclude that the imported sheets which are printed, etched, cleaned, lacquered and punched into circuit board bases are "substantially transformed constituent materials" used in the production of the calculators. Accordingly, their cost or value is to be considered in determining whether the 35 percent criterion has been satisfied. However, the value of the electronic components (of foreign origin) which are stuffed into the circuit board bases may not be included in the 35 percent requirement since they are not considered substantially transformed constituent materials of the calculators.

In T.D. 76-100 this office took the position that "/a/rticles produced by the joining and fitting together of

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

B2

components are not considered substantially transformed constituent materials." Since the stuffing of the electronic components into the printed circuit board bases is a "joining" operation, the circuit board with electronic components does not qualify as a "material" produced in Hong Kong for GSP purposes. Essentially, the imported electronic components have not been substantially transformed, and are therefore not properly includable in the 35 percent test.

Sincerely yours,

Paul G. Clarke

CLA-2:R:CV:MA
056064 LXL

Dear Mr.

In your letter of December 20, 1977, you inquire as to the tariff status of a pad of polyurethane made in Mexico. The pads are further designated as a RF-4 Elastomer Unit.

The pad is made of a tough polyurethane material sandwiched between and bonded to a pair of 10 gauge, 6-1/2" diameter, steel plates. The blueprint illustrates a pulley like object, 1.708. inches thick with an indentation in the middle of one of the plates and a corresponding projection on the other steel plate. The article weighs 3.56 pounds. You state that ten of the parts are placed in series with the friction elements within a railroad draft gear. The series of pads act as a powerful 200,000 pound spring. The draft gear plays an essential role in coupling operations of a train.

If the pads are used as parts of draft gear chiefly used on passenger, baggage, mail, freight and other cars which are not self-propelled, they are classifiable under the provision for other parts of cars provided for in item 690.15, in item 690.35, Tariff Schedules of the United States (TSUS) and dutiable at the rate of 9 percent ad valorem.

Sincerely yours,

Dear Mr.

Your inquiry of January 16, 1978, requested the tariff classification of certain rail vehicles manufactured in West Germany.

Two different cars, a muck haulage car and a concrete remixer car, were described. Both cars are industrial railroad cars. Neither is a self-propelled unit. They are designed to be moved by a locomotive and have a coupling system so they can be coupled together to form a train. Both vehicles are mounted on two four-wheel bogies. The muck hauler comes equipped with an automatic emptying system on board.

These industrial railroad cars would be classifiable as railroad and railway rolling stock: passenger, baggage, mail, freight and other cars, not self-propelled, under item 690.15, Tariff Schedules of the United States (TSUS), dutiable at the rate of 18 percent ad valorem.

Sincerely yours,

Salvatore E. Caramagno

CIS-2:R:CV:MC
NOV 5 1979 061738 RC

The Honorable
Richard G. Lugar
United States Senate
Washington, D.C. 20510

Dear Senator Lugar:

With your letter of October 19, 1979, you enclosed a letter from concerning the rate of duty on Di Basic Lead Phthalate. questions the tariff classification of this product in item 403.60, Tariff Schedules of the United States (TSUS).

Item 403.60, TSUS, covers:

> Cyclic organic chemical products in any physical form having a benzenoid, quinoid, or modified benzenoid structure, not provided for in subpart B or C of this part:
> Other:
> Other

According to , Di Basic Lead Phthalate, formed from a reaction between phthalic anhydride and lead oxide, has a final analysis of about 80 percent lead oxide and 20 percent phthalic anhydride. Phthalic anhydride is a benzenoid specifically provided for by name in Schedule 4, Part 1 ("Benzenoid Chemicals and Products") of the Tariff Schedules, in item 403.08, TSUS. Since Di Basic Lead Phthalate is a compound composed of benzenoid ingredients, Customs is directed by statute to classify the product in Schedule 4, Part 1, as set out in Schedule 4, Part 1, Headnote 1:

> 1. Except as specifically set forth in the headnotes to other parts of this schedule, all products described in this part shall be classified hereunder even if more specifically described elsewhere in this schedule.

B7

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

061738

Hence, Di Basic Lead Phthalate is a benzenoid product properly classifiable in item 403.60, TSUS, dutiable at the rate of 1.7 cents per pound plus 12.5 percent ad valorem.

The U.S. Customs Service has no authority as an administrative agency to alter the benzenoid statutory provisions, this being primarily a legislative matter. If you would like to pursue this matter further, you might contact the Office of the Special Representative for Trade Negotiations, 1800 G Street, N.W., Washington, D.C. 20506.

If we can be of further assistance to you, please feel free to call on us.

Sincerely,

(Signed) John R. Thorne

[redacted]

AUG 0 1 1980

CLA-2:RRUCSC
063884 RK

063884

Dear

In your letter of July 18, 1980, you asked for a further explanation of the styling of girls' knit top garments which you propose to assemble in a foreign country from component parts and materials of United States origin. This was the subject of a previous letter dated June 19, 1980, under file No. 063798.

It was previously stated that the knit tops, which are assembled abroad from domestic components pre-cut to size and pattern shape and exported rolls of reinforcing cotton fabric, elastic, and picot-edged material, would qualify for allowances from the payment of duty under the assembly provisions of item 807.00, Tariff Schedules of the United States (TSUS).

The picot-edged ruffle material, consisting of one-inch wide matching knit fabric with small threadlike loops forming an ornamental edging is exported in roll form, cut to proper length, and merely sewn to the garment to form the ruffled collar. This foreign assembly process qualifies the imported garment for item 807.00 tariff treatment. Similarly, garments sewn with either picot-edged ruffle or binding material, or both, would also qualify for item 807.00 tariff relief.

With respect to classification, however, duty is assessed under item 807.00, TSUS, on the difference between the total value of the imported merchandise and the cost or value of the exported components. Upon entry into the United States, imported garments that are considered ornamented are assessed with duty at the rate for ornamented wearing apparel, subject to the partial exemption from duty under item 807.00, TSUS. Or, stated another way, classification of the imported garments is subject to the duty assessed on the difference between the value of ornamented wearing apparel and the value of the exported components of United States origin under item 807.00, TSUS. As stated in the literature submitted with your letter, the garments are ornamented for tariff classification purposes by virtue of the ruffle at the neck.

B9

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

In these circumstances, garments imported with picot-edged ruffles at the collar are subject to the rates of duty for ornamented wearing apparel, while garments with only binding material around the neck opening are not. In both cases, the assembly provisions of item 807.00, TSUS, remain applicable.

Sincerely,

(Signed) R. X. ARNOLD

26 JAN 1981

[redacted]

Dear [redacted]

This is in response to your letter of October 30, 1980, requesting the tariff classification of certain aluminum carbody shells manufactured by [redacted] (Your file 50-2).

The shells in question comprise the sidewalls, end bulkheads, roofs and underframes of not self-propelled railway passenger cars. The shells have only been prime coated. After importation the wheel assemblies, couplers, brake system and all interior details are added. The value of the imported carbody is estimated to be 25%-35% of the value of the finished railway car.

The classification issue is whether these carbodies constitute parts of railway cars or whether they are substantially complete so as to constitute unfinished railway cars.

Applying the criteria for making this determination enunciated in Daisy-Heddon, Div. Victor Comptometer Corp. v. United States, 66 Cust. Ct. 97, C.A.D. 1228 (1979), and in light of Headquarters Ruling Letters

065545

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B11

(HRL) 062842 dated November 20, 1979, and HRL 043520 dated March 31, 1976, we conclude these carbodies are parts of railway cars.

Accordingly, the subject merchandise is properly classifiable under the provision for parts of not self-propelled railway passenger cars in item 690.35, Tariff Schedules of the United States (TSUS), dutiable, as products of Canada, at the column 1 rate of 8.1 percent ad valorem.

Sincerely,

(Signed Arthur P. Schifflin

Director, Classification & Value Division
Headquarters

Classification of wire cut to length

In your memorandum of December 4, 1980, (Your file CLA-2-06-SCD-11-CST-18,437), you requested classification of Headquarters' position on the classification of cut wire in view of Section 20 of Public Law 96-467, October 17,1980. Section 20 amended Headnote 3(i) to subpart B of part 2 of schedule 6, TSUS, by striking out "cut to length." The legislative history indicates that the primary purpose for the change was to ensure that certain small diameter cold finished steel bar would be classified as bar rather than as wire.

The issue is whether wire products cut to length, other than the small diameter cold finished steel bar, are now precluded from classification under the provisions for wire.

It is our opinion that the amended headnote language must control. The term "wire" is defined for tariff classification purposes in headnote 3(i) of subpart B, part2, schedule 6, TSUS. The language is clear and should be applied as such. We note that the court in Overton & Co. v. United States, C.D. 4875 (1980), stated the statutory definitions for "bars" and "shapes" were determinative of the scope of the tariff provisions for such articles. The statutory provision for "wire" is similarly controlling.

The legislative history for section 20 of P.L. 96-467 indicates that the primary concern was to make certain that cold finished steel bars were classified under the provision for bars which carries a significantly higher rate of duty. On page S13661 of the Congressional Record, September 26, 1980, it was stated:

TO THE

B13

***This provision would provide for a change in definition of steel wire so as to exclude the "cut to length" products, mainly of cold finished steel, from that definition.

It was also acknowledged in House Report No. 96-566 on H.R. 4309 (the original bill to change headnote 3(1)) that wire is usually shipped in coils whereas the small diameter cold finished steel bars are shipped cut to length.

It appears, therefore, that the Congress was aware that cut to length products other than steel bars would be affected. No attempt, however, was made to differentiate between these products. In view of this, we believe that wire, cut to length, is now precluded from classification as wire. Such wire would be classifiable under the appropriate provision for bar, or, if the wire does not fit the definition for bar, then it would be classifiable under the provision for angles, shapes, and sections.

The cut to length wire products would not be classifiable as either parts or as articles of metal unless it could be determined that they are processed to the degree that they are dedicated to the making of a specific article. Avins Industrial Products Co. v. United State, 62 C.C.P.A. 83, C.A.D. 1150 915 F.5), is controlling on this issue.

Sincerely,

(Signed) Arthur P. Schifflin

Chief, Customs Information Exchange
United States Customs Service
6 World Trade Center
New York, New York 10048

Dear Sir:

Customs Form 6431, dated March 24, 1980, relates to a difference of opinion concerning the classification of certain elevator controllers, made in Canada by and imported through the port of Buffalo, New York under entry No. 309958 of February 15, 1980.

FACTS:

The merchandise in question consists of elevator controllers with common relay panels whose primary function is to start and stop the elevators and to control their acceleration and deceleration. They are essentially electrical in operation and will be automatically monitored by computerized circuitry to permit normal functioning.

ISSUE:

Whether the controllers are classifiable as control panels under item 685.90, Tariff Schedules of the United States (TSUS), or as parts of elevators under item 664.10, TSUS.

LAW AND ANALYSIS:

It is suggested that the processing of data to accomplish the switching operations by relay panels and the changing of speed may be sufficient to render the apparatus more than a control panel. This identical issue was the

C1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

subject of our ruling dated June 28, 1979 (061411), which covered a difference case involving elevator controllers made in Canada and apparently operating in the same manner as the subject devices. In that case we held that the controller units came within the description of control panels and this specific provision would prevail over the provision for parts of elevators in view of General Headnote 10(ij), TSUS. We do not believe that the presence of computerized circuitry is sufficient to remove these automatic controllers from the description of control panels.

HOLDING:

In view of the foregoing, we are of the opinion that the subject elevator controller units should be classifiable under the provision for control panels in item 685.90, TSUS, at the then existing rate of 8.1 percent ad valorem.

Sincerely,

(Signed) Harvey B. Fox

Dear

In your letter of April 29, 1982, you request information regarding the tariff status of various mini timers made by the in Japan.

You state that these devices have various applications such as controlling cookers, lights, etc. The sample HRT submitted consists of a relay, several capacitors, a potentiometer, 5 resistors, and 2 transistors, all mounted on a circuit board attached to an 8-prong base and enclosed in a plastic case.

Timers of this description, which do not contain watch or clock movements with moving parts, are classifiable under the provision in item 685.90, Tariff Schedules of the United States, for electrical apparatus for making or breaking electrical circuits and dutiable at the column 1 rate of 7.3 percent ad valorem.

Sincerely,

[redacted]

Dear [redacted]

This is in response to your letter of December 10, 1980, concerning the tariff classification of metallicized polyester film strips and sheets.

The polyester in spool form consists of single filaments which are 0.014 inch or 0.01 inch in width and priced from $3.30 to $7.75 per pound. Schedule 3, Part 1, Subpart E, Headnote 3(b), Tariff Schedules of the United States (TSUS), defines monofilaments as "single filaments*** whether flat, oval, round, or any other cross sectional configuration, which are not over 0.06 inch in maximum cross sectional dimension." Therefore, these items would all be considered monofilaments. Further, U.S. Customs has determined that the samples are 60.1, 74.2, and 63.9 denier respectively.

Therefore, these articles would be classified under the provision for monofilaments (in continuous form), with or without twist, whether known as monofils, artificial straw, yarns, or by any other name, not over 150 denier, valued over 80 cents per pound, in item 309.03, TSUS, dutiable at the rate of 25 percent ad valorem.

The sample of the polyester film in silver, light and the dark gold, and green, measuring approximately 510 milimeters in width, would be classifiable under the provision for films, strips, sheets, wholly or almost wholly of plastics, not of cellulosic plastics, flexible, other, other, of polyester, in item 771.43, TSUS, dutiable at the rate of 5.6 percent ad valorem for merchandise entered on January 1, 1981, or later.

This merchandise would be subject to duty-free entry under the Generalized System of Preferences if all requirements are met.

Sincerely,

[redacted]

District Director of Customs
Blaine, Washington 98230

Dear Sir:

Re: Application for Further Review of Protest No. 3004900025O, Filed October 30, 1979, Concerning the Classification of Liquid Sodium Chlorate

FACTS:

The imported sodium chlorate is said to be converted by the importer to chlorine dioxide. Sodium chlorate is said to be obtained by an electrolytic process from sodium chloride. It is contended that the conversion is not complete and, as a result, this sodium chlorate solution contains sodium chloride as an impurity.

ISSUE:

Whether the sodium chlorate-sodium chloride solution is to be considered a mixture of two or more inorganic compounds in item 423.96, or whether the sodium chloride in the solution is to be regarded as an impurity, and the sodium chlorate classified as such in item 420.08, Tariff Schedules of the United States (TSUS).

LAW AND ANALYSIS:

A sample of the importation was described by a Customs laboratory as being a yellow liquid containing 77 percent sodium chlorate and 8 percent sodium chloride by weight.

It is contended that the sodium chloride is an impurity, the result of incomplete conversion in the production of sodium chlorate. A decision,

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

CS

it is alleged, involving similar merchandise was the subject of Internal Advice 23/76 dated October 4, 1976, (044231). At issue in that case was the classification of two bulk chemicals-sodium chlorate and sodium chloride- which were shipped in railroad cars. The two chemicals were separately placed in the car, layered on top of each other, not mechanically mixed, with some mixing taking place however, due to the loading and shifting in the railroad car. It was concluded that no mixture had in fact been accomplished, but that commingling did result, with the importation dutiable at the rate for sodium chlorate in item 420.88, TSUS.

It is understood that in producing sodium chlorate from sodium chloride by electrolysis, the process may be carried to completion with only trace amounts of sodium chloride resulting; or it may be stopped at any given point with a solution containing known percentages of sodium chlorate and sodium chloride. Far from being an impurity, sodium chloride acts as a reducing agent in the production of chlorine dioxide. In this connection, it is understood that sodium chloride content is adjusted by the producer according to the purchaser's specifications. In fact, while the amount of sodium chloride in the solution may be determined by electrolysis, sodium chloride is often added to the sodium chlorate solution. Accordingly, this sodium chlorate solution is not similar to the situation described in I.A. 23/76, rather this is a purposeful mixture. It is obvious that the sodium chloride is not an impurity but a desired component of the solution.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

C6

082280

This importation is classifiable as a mixture of two or more inorganic compounds in item 423.96, TSUS.

You are directed to deny the protest in full.

A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

The protest file is enclosed herewith.

Sincerely,

(Signed Arthur P. Schifflin

Dear

Your letter of January 2, 1981, concerns the dutiable status of an anhydrous sodium metasilicate-sodium tripolyphosphate mixture, and an anhydrous sodium metasilicate-caustic soda mixture. The mixtures are intended to be used as a base for detergents.

Mixtures of the type described are classifiable under the provision for mixtures of two or more inorganic compounds in item 423.96, TSUS, dutiable at the rate of 3.8% ad valorem.

It should be noted that as there has been a finding of dumping on sodium metasilicate, an importer may be required to post a cash deposit equivalent to 60% of the ad valorem rate (F.O.B. foreign port).

Sincerely,

(Signed) A. P. SCHIFFLIN

[redacted]

Dear [redacted]

This is in reference to your inquiry concerning the tariff status of certain potassium and sodium silicate compounds, products of Switzerland.

The products are said to be used as binders in the production of welding rods.

Inobond V 533 is said to be a water solution containing a mixture of potassium and lithium silicate, and is classifiable under the provision for mixtures of two or more inorganic compounds in item 423.96, Tariff Schedules of the United States, TSUS. The rate of duty is 3.1 percent ad valorem.

Potassium silicates 3306, 3417, 3918, 3919, 4009 and 4044 are said to be water solutions of potassium silicate. These products are classifiable under the provision for other potassium compounds in item 420.36, TSUS, the rate of duty is 3.7 percent ad valorem.

Sodium silicate 4011 and 4513 are described as water solutions of sodium silicate. They are classifiable under the provision for sodium silicates in item 421.34, TSUS. The rate of duty is 1.1 percent ad valorem. No sample was submitted for sodium silicate 4006 but it is presumed to be similar in composition as the other sodium compounds, and if such is the case, it would be similarly classified.

Sincerely,

[redacted]

069420

Dear

This is in reference to your submission on the classification of three hydrocarbon solvents, products of Tolu Sol 20, V.M. and P. Naphtha and Sol Mineral Spirits.

V. M. and P. Naphtha, Sol and Tolu Sol 20 are said to be produced from crude oil which is distilled into gas oil in a crude distillation unit. The gas oil is hydrotreated and hydrocracked. Hydrocracking is described as converting heavy hydrocarbons into lighter grade gasoline feedstock by catalytic reaction in the presence of hydrogen. The three above main products are distilled from this intermediate resultant product. This process of manufacture is claimed not to add any benzenoids to the end products, nor does it enhance the benzenoids already present in the three products.

As the method of manufacture does not produce any additional benzenoids and the products conform to the specifications for petroleum naphtha, V. M. and P. Naphtha, Sol (Mineral Spirits) and Tolu Sol 20 are all classifiable under the provision for naphtha in item 475.35, Tariff Schedules of the United States.

Sincerely,

(Signed Arthur P. Schifflin

Arthur P. Schifflin
Chief, General

[redacted]

Dear [redacted]

We are in receipt of your letter of May 10, 1982 regarding the tariff classification of synthetic rubber soling sheets. Inasmuch as a sample of the merchandise has not been submitted for examination, it would be inappropriate to issue a tariff classification ruling. However, we believe that we can address your concerns over a difference of opinion you have with certain Boston, U.S. Customs Service officials regarding the proper tariff classification of the synthetic rubber soling sheets.

You describe the merchandise as synthetic rubber soling sheets of over 0.009 inch in thickness. You contend that proper tariff classification should be under item 771.4350, Tariff Schedules of the United States (TSUS). U.S. Customs at Boston holds that the merchandise is classifiable under item 771.4100, TSUS. The rates of duty are 5.3 percent and 6 percent respectively. We believe that the tariff classification assigned by the port of Boston is correct. Item 771.41, TSUS is a very specifically worded provision of the tariff schedules and limited in its scope. In situations where articles of merchandise are specifically provided for in a tariff provision, in this instance item 771.41, TSUS, classification of the merchandise is governed by the specific provision.

You have described the merchandise as flexible, synthetic rubber soling sheets, not in rolls, over 0.009 inch thick, not of cellulostic material; of a material other than polyester, polyvinyl chloride, polyethylene or polypropylene. Clearly, and judging by your submitted description, this is merchandise provided for in item 771.41, TSUS, as it meets the criterion established in this provision to such an extent that classification under any other, general provision is precluded. If the rubber were in the form of rolls, classification under item 771.43, TSUS, would apply.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

C11

The last paragraph of your letter indicates a misunderstanding of the history of the tariff items in question. As can be readily gleaned by examination of the attached pages from the History of the Tariff Schedules of the United States Annotated, United States International Trade Commission publication 1192, prior to January 1, 1980, all film, strips, and sheets, which are flexible and not comprised of cellulosic materials were classified under item 771.42, TSUS. A change was effected January 1, 1980, but not owing to ambiguous wording of the tariff schedules as intimated in your letter. The change was a result of a conscious effort by participating negotiators during the Tokyo Round.

Sincerely,

Arthur P. Schifflin
Chief
General Classification Branch

enclosures

071035

Dear Sir:

This ruling is in response to the Application for Further Review of Protest No. 3801-2-001055, dated July 16, 1982.

ISSUE:

The question presented is whether a transceiver head for a microwave motion detector device is properly classifiable under the provision covering other cooking stoves and ranges, and parts thereof, in item 684.28, Tariff Schedules of the United States (TSUS), or under the provision covering electrical apparatus for making or breaking electrical circuits, and parts thereof, in item 685.90, TSUS.

FACTS:

The transceiver head in question is a sensing device, consisting of a zinc end with two diodes, which emits a microwave frequency and receives its own echo. When someone intrudes and interferes with the reception of the echo, the transceiver head sends a signal which is relayed to activate an alarm. The transceiver head is to be housed in an enclosure which also contains a circuit board to power the transceiver, a relay, and an alarm circuit.

LAW AND ANALYSIS:

The present record does not contain any information which would support the importer's claim that the product in question constitutes a part of a cooking stove or range. Rather, the importer specifically

C13

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

states that the transceiver head is a component part of a microwave motion detector device which is marketed to the security industry. Therefore, there is no basis for classifying this article in item 684.28, TSUS.

Although the file indicates that consideration was also given to the possibility of classifying this article under the provision for burglar alarms and other electrical sound or visual signaling apparatus, and parts thereof, in item 685.70, TSUS, we do not believe that this would be the correct classification. Notwithstanding the fact that the transceiver head is to be used in a burglar alarm or similar apparatus, its specific function is to send a signal to the relay, thus activating an electrical circuit which triggers the alarm. We therefore believe that the transceiver is more specifically described under the provision for electrical apparatus for making or breaking electrical circuits, and parts thereof, in item 685.90, TSUS.

CONCLUSION:

Accordingly, the transceiver head was properly classified in item 685.90, TSUS. The protest should therefore be denied. A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant. The protest file is enclosed.

Sincerely,

(Signed) R. X. ARNOLD

071304 EM

071304

[redacted]

Dear [redacted]

In your letter of April 21, 1983, on behalf of [redacted] you asked about the applicability of item 807.00, Tariff Schedules of the United States (TSUS), to a fabric that is exported for flocking in Canada from component materials of United States origin.

A sample finished flocked fabric and aggregate component fabric and flocking material were submitted. Component nylon flocking fibers are exported to Canada in very short minute lengths in huge quantities of 50-pound bags. Base fabric is also exported in 1,000-yard rolls that are about 59 inches wide and adhesive in the form of a liquid resin compound is exported in 480-pound drums.

The foreign operations consist of applying the resinous adhesive compound over the fabric and depositing the fibers over the adhesive-treated layer of fabric, using an electrostatic method of application along with a mechanical beating action which is not further explained. The resin-bonded flock-dotted fabric is cured in an oven to harden the resin and give substance to the unified mass. The final product is cut into 125-yard rolls for ease and convenience of materials handling for return shipment to the United States.

With respect to articles assembled abroad, item 807.00, TSUS, applies only to fabricated United States components that are designed to be fitted together with other components in an assembly process, with no other operations performed thereon except the attachment of the components to form the imported merchandise.

On the basis that the fibers are exported in a loose condition and further subjected to a mechanical beating process before being deposited on the adhesive-treated fabric, this described operation appears to be more in the nature of a manufacturing process than an assembly. There is no physical fitting together of identifiable components in the sense required for a genuine assembly. The sample submitted appears to be the result of combining myriad quantities of minute fibers to produce a velvety cloth.

D1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

071304

In clarifying assembly operations under item 807.00 of the Technical Amendments Act of 1964, it was stated in H.R. Report No. 1728, 88th Cong., 2nd Sess., Page 46, that "* * * Item 807.00 would apply with respect to components of types which are designed to be fitted together with other components and would not apply to chemical products, food ingredients, liquids, gases, powders, etc."

In this respect, since the described nylon flocking material is not the type of acceptable component that can enter into an assembly, no allowances can be made under item 807.00, TSUS, for any of the exported materials in the absence of an acceptable assembly having been performed abroad.

Sincerely,

(Signed) Harvey B. Fox

NOV 25 1983

[redacted]

Dear [redacted]

073264

In your letter dated September 28, 1983, you indicate that you disagree with a portion of our ruling letter 070216 dated August 9, 1983, concerning the determination that the warp knit female half of a closure device does not have fast edges. That determination resulted in our finding that the subject merchandise was not classifiable under the provisions for narrow fabrics. In addition, you request information on the criteria used to determine whether a fabric has fast edges.

Another sample of the identical merchandise has been submitted for our review. It is under twelve inches in width and is of a man-made warp knit construction that has been brushed or napped on one side and coated with a plastic resin material on the opposite side. We have submitted the sample to the Customs laboratory for further analysis. In a report dated October 24, 1983, the laboratory found that the sample does not have fast edges for tariff purposes.

The determination was based on the definition of the term "narrow fabrics" in Headnote 2(a)(i), Subpart A, Part 4, Schedule 3, Tariff Schedules of the United States (TSUS), as woven or knit fabrics, not over 12 inches in width, with fast edges (that is, with both edges made or treated to prevent the fabric from unraveling, by means of selvages, stitching, gumming, fusing, or simple hemming).

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

D3

[redacted]

Although the edges of the submitted sample do not unravel, they are not considered to be fast. In order for certain merchandise to be classifiable as a narrow fabric it must be under 12 inches in width and the edges of the sample fabric must be treated by one or more of the named processes to prevent unraveling. In the instant situation, one side of the submitted sample has been coated with a plastic resin material.

Copies of the laboratory reports dated June 20, 1983, and October 24, 1983, are enclosed for your reference.

Sincerely,

(Signed) Arthur P. Schifflin

Dear

This is in reference to your letter of May 2, 1984, concerning the classification of a product which you believe is chiefly used as a motor fuel within the meaning of Headnote 2(D), Part 10, Schedule 4, TSUS. It is understood that the product may be produced in the Philippines, Singapore, or South Korea.

The chemical composition is given as:

Component	Percent
Aromatics	39.64
Paraffins	52.73
Monocycloparaffins	7.63

The aromatic content is broken down as:

	Percent
Benzene	0.84
Toluene	4.32
Xylene	5.37
C-9 Aromatics	21.76
C-10 Aromatics	6.14
Endanes and Tetralines	1.21

The properties listed were:
Antiknock Index (R&M) - 87.8
Reid Vapor Pressure - 10.0
Distillation Temperatures - 10 percent at 140°F etc.
Gravity 55°.8 API

You note that the total aromatic distribution of the petroleum derivation exceeds 25 percent, but that no one aromatic (including dutiable benzenoids) exceeds the limitation. Accordingly, you request an interpretation of the Headnote 1, Part 10, exception to the benzenoid rule.

DS

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

Headnote 1 states that any product described in Part 10 (petroleum) and Part 1 (benzenoid) is classifiable in Part 1, except for motor fuel, lubricating oils and greases, and fuel oils "containing by weight not over 25 percent of any product described in said Part 1." Customs interprets "any product" as meaning any one product listed, so that it would not be the total of Part 1 chemicals listed which would control, but the total of a particular chemical present. Since in your example none of the components listed exceeds the 25 percent limitation, the product would not be classifiable in Part 1, if, in fact, it is chiefly used as a motor fuel. If this is the chief use, it would be classifiable in item 475.25, TSUS.

Sincerely,

Signed Arthur P. Schifflin

Mr. Timothy J. Murray
Johnson Camping, Inc.
P. O. Box 966
Binghamton, New York 13902

Dear Mr. Murray:

Your letter dated September 17, 1984, requested the tariff classification of a screenhouse from Korea.

The submitted illustration depicts a screenhouse that measures approximately eleven feet six inches by twelve feet six inches. It has screen walls composed of man-made fibers. Polyester fabric across the mid-section provides protection from the rain. The screenhouse will be imported without poles.

Several labels will be attached to the screenhouse. A decal made of plastic material bearing the printed word "Eureka" will be placed on the polyester fabric by means of heat transfer. The second label composed of a woven textile material is inscribed with the words "Spinnaker by Eureka" in fancy lettering together with a pictorial design of a sail surrounded by a border. The third sample is a woven textile label that features a border surrounding the word "Eureka." All the labels will be visible on the screenhouse.

The question whether a decorative label ornaments a certain article is governed in general by the case law on ornamentation. The test that has been developed to determine if a feature named in Headnote 3 constitutes ornamentation is whether that feature can be considered primarily decorative rather than functional. Blairmoor Knitwear Corp. v. United States, 60 Cust. Ct. 388, C.D. 3396 (1968). Equally well-settled in determining whether a label constitutes ornamentation is Customs position that it is basically a subjective judgment which must be made by considering the overall effect of the label on the individual article.

Recently, the Customs Service addressed the question of whether a decorative label ornaments a car cover in Headquarters Ruling Letter 076579 dated August 28, 1985. In finding that the car cover was not ornamented for tariff purposes, we noted that the label in issue must ornament the car cover in an accepted trade sense and stated:

D7

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

> In those instances where we lack information regarding whether certain features ornament the fabric or article in an accepted trade sense, the Customs Service follows the principle expressed in Excelsior Import Associates, Inc. v. United States, 66 CCPA 1, C.A.D. 1212 (1978), that in the absence of evidence by the importer concerning whether the garment was ornamented in an accepted trade sense, the fact that consumers regard a certain feature as enhancing a garment is determinative.
>
> * * * *
>
> No evidence has been presented on the status in the trade of car covers with labels. If the presence of a decorative label on a car cover is considered by the trade to ornament such merchandise, we would probably consider the subject car cover to be ornamented for tariff purposes.
>
> Nor has evidence been presented that consumers regard the label as enhancing the car cover. In our opinion, a consumer when viewing the subject car cover which is an industrial product would not consider the label to embellish the appearance of the car cover. That is to say there may be certain industrial products which by their very nature are not capable of being ornamented for tariff purposes.

Like the label on the car cover, the subject labels neither have been demonstrated to ornament the screenhouse in an accepted trade sense, nor have they been shown to be regarded by consumers as enhancing the screenhouse.

The three decorative labels do not ornament the screenhouse. The screenhouse is classifiable under the provision for other articles not specially provided for, not ornamented, of man-made fibers in item 389.62, TSUS, with duty at the rate of 8 cents per pound plus 11 percent ad valorem.

We are not willing to say that no decorative label will ever ornament a screenhouse. A label must be judged on the basis of the particular facts

D8

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

075176

in each case. Certain highly decorative labels may represent a disproportionate amount of the surface area of the article they are claimed to ornament and may be regarded as ornamentation for tariff purposes.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Divison

D9

FEB 15 1985

CLA-2 CO:R:CV:G
075200 JH

District Director of Customs
San Francisco, California 94111

Dear Sir:

Re: Decision on the Application for Further Review of Protest 2809-4-000460, on the Classification of C-Reactive Protein, a Product of the United Kingdom

C-Reactive Protein (CRP) is said to be derived from human pleural fluid from the cavity between the lungs and the thoracic cavity. CRP concentrated serum is derived from human blood, and/or human ascites fluid from the abdominal cavity. The imported product is said to be of 99 percent purity and to be imported in a buffer solution. It is used as a component in certain diagnostic kits.

In the technical literature, CRP is described as a "homogeneous acute phase protein", apparently because it is present in the serum of patients in the acute stages of bacterial and viral infections, collagen diseases, and other inflammatory processes. The presence of CRP has been found to be the most sensitive index of rheumatic activity in the absence of unrelated inflammatory processes.

The importer claims that the product is classifiable as an analogous biological product in item 437.76, TSUS, because it is used as an aid in diagnosis and is derived from a biological source. Customs asserts that the product is not a human blood fraction, nor analogous to viruses, serums, vaccines, toxins, or anti-toxins. Customs, therefore, classified it as a mixture in item 430.20, TSUS, with a duty rate applicable to the component classifiable in item 425.52.

CRP is a specific protein which has been described technically as a serum antigen. An antigen is a substance, usually protein or carbohydrate, that stimulates the production of antibodies. Antigens include toxins, enzymes, and certain constituents of blood corpuscles or of other cells. Therefore, CRP, if not a toxin, is a toxin-like substance, since it stimulates the production of anti-bodies. CRP appears to exist in the same form in vivo and in vitro, and, therefore, there is no indication that it is a mixture of proteins. More specifically, CRP is an analogous biological product, a toxin-like substance which is classifiable in item 437.76, TSUS.

You are directed to allow the protest in full.

District Director of Customs
300 S. Ferry Street
Terminal Island
San Pedro, California 90731

Dear Madam:

Re: Decision on Application for Further Review of Protest No. 27043003580

The above-captioned protest and application for further review were filed against the tariff classification of certain toy figures which were the subject of entry No. 83-297141-7 filed at your port in 1983. This merchandise was made in Hong Kong. Our decision follows:

ISSUE:

The merchandise was entered under the provision for toy figures of animate objects in item 737.40, Tariff Schedules of the United States (TSUS). Classification under that provision would allow for an exemption from duty under the Generalized System of Preferences (GSP). However, the merchandise was classified by Customs under the provision for toy figures of inanimate objects in item 737.49, TSUS, which excludes products of Hong Kong from the GSP exemption. The 1983 column 1 rate of duty under that provision was 12.3 percent ad valorem. The main issue thereby raised by this rate advancement is whether the new definition enacted in 1983 for inanimate objects in Headnote 3, Subpart E, Part 5, Schedule 7, TSUS, which changed the coverage of the provision to toys, not specially provided for, in item 737.95, TSUS, also changed

D12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

the scope of the provisions for toy figures of animate objects under which counsel for the protestant claims the instant merchandise was always previously classified.

FACTS:

The toy figures in question are generally referred to as fantasy figures and, more specifically, depict a winged horse and a two-headed dragon.

LAW AND ANALYSIS:

Legislation amending the TSUS of January 12, 1983, Pub. L. 97-446, section 113, 96 Stat. 2329, added the above-cited headnote to explain the coverage of new provisions which were also added covering toy figures of inanimate objects. These provisions were specific breakouts under a new superior heading for merchandise which previously had been classified in the basket toy provision in item 737.95.

The new headnote, in pertinent part, defines toy figures of inanimate objects as those which are "predominantly non-earthly in character" or which "possess features which are a hybrid of features of more than one animate object." These descriptions were generally intended to conform to preexisting Customs classification practices thereby making no duty rate changes, except with respect to certain merchandise for which temporary exemptions from duty were established in Schedule 9, TSUS, and which are not pertinent to the instant merchandise.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

D13

075394

The preexisting Customs position was explained in several lengthy decisions of a complex nature for which the few lines of the new Headnote 3 could hardly be regarded as a complete summation. In those decisions, the typical reference to non-earthly or alien creatures was in the context of imaginary extraterrestrial creatures depicting specific personalities in contemporary science fiction. The configuration of the instant merchandise, by contrast, draws on classical mythological prototypes which although also imaginary are more analogous to real life creatures.

For example, the instant dragons, in common with the earliest depictions from archeological artifacts to those which St. George had to contend with in the paintings of Raphael, clearly show their genesis in earthly reptilian forms. They represent an undifferentiated type of reptile which we should regard as earthly in the same sense that we recognized certain undifferentiated subhuman primates as representing animate objects in our decision in C.S.D. 81-236, 15 Cust. Bull. 1202 (1981), and in our so-called Star Wars decision cited therein. Accordingly, it is our opinion that an undifferentiated type of reptile, even though referred to as a dragon, should receive no less favorable duty treatment than an undifferentiated type of subhuman primate, and that the new headnote definition was not intended to alter that

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D14

075294

result. Therefore, we find that dragons, as a rule, will not usually be found to be regarded as predominantly non-earthly.

Nor do we find that an extra head should have any duty rate consequences. An extra head would in the biological analogy be regarded as a mutation, and would not be regarded as a hybridization.

We also find that a winged horse is not a hybridization as contemplated by the headnote definition. The types of figures to which we applied the term "hybrid" in our preexisting decisions were those which were composed of parts representing different earthly creatures. For example, they typically included the head of one species on the torso of another species. In C.S.D. 81-236, supra, we specifically separated a winged figure from hybrid articles, and classified it as a toy figure of an animate object. Our rationale for doing so was that the wings were subsidiary to the other anatomical characteristics of the figure. While we acknowledged that a winged creature was not the same as one without wings, we held that the wings did not detract from the otherwise humanoid character of the toy figure. The same can be said for the instant winged figure which although not actually a horse is nonetheless predominantly horse-like and earthly in spite of the wings.

In other words, if anatomical features of one species are simply added to the otherwise anatomically complete figure of

E1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

075294

another species, that does not necessarily constitute a hybridization. For example, we would not expect that a devil figure would be regarded any less humanoid or doll-like because of a tail appended to the otherwise anatomically complete figure. However, we would agree that there are situations when the wings of a bird when added to the anatomical parts of other species would constitute a hybridization. Such an instance would be when the wings were a substitution for the homologous parts of another species to which the wings are attached to form a composite figure. But the winged horses at issue have both wings and front legs. They are not a composite of parts of different species, but rather a complete version of one species to which the wings have merely been added. The wings, in these circumstances, are, in a sense, merely supernumerary, and do not, in our opinion, constitute a hybridization.

HOLDING:

For the foregoing reasons, we find that the instant two-headed dragons and winged horses do not constitute either predominantly non-earthly creatures or hybrid creatures within the meaning of Headnote 3, Subpart E, Part 5, Schedule 7, TSUS, and that, insofar as this protest is concerned, that headnote does not operate to change the classification of merchandise previously classified under the provision for toy figures of animate objects in item 737.40, TSUS. Accordingly,

075411

Roberta Liberman
Executive Vice President
Michele
M & L Distribution Co., Inc.
P.O. Box 113
Mountain Lakes, New Jersey 07046

Dear Ms. Liberman:

This is in response to your letter dated December 14, 1984, concerning the appropriate tariff classification of five garments of which you provided samples. A conference to discuss this matter was held on September 6, 1985.

The five garments submitted with your inquiry include: style Nos. 5313 and 5314, which are ornamented with embroidery, style No. 5307, a "Heart pattern" garment with no style number, and a "Strawberry pattern" garment also with no style number. Style No. 5307, the "Heart pattern" and "Strawberry pattern" garments are not ornamented. All of the samples provided are knit. Style Nos. 5313 and 5314 are composed of 60 percent polyester and 40 percent cotton. The remaining three garments, style No. 5307, the "Heart pattern" and the "Strawberry pattern," are composed of 60 percent cotton and 40 percent polyester. All of the submitted samples have curved hems and are approximately 35 inches to 36 inches in length. Style No. 5313 has a front placket with no buttons and short sleeves and the neckline and sleeves are finished with narrow lace fabric. Style No. 5314 has a "V" neck with capping and short sleeves with capping. Style No. 5307 has a two-button front placket, a rib knit band at the neck and short sleeves with a rib knit band. The "Heart pattern" and "Strawberry pattern" styles have round necklines and short sleeves which are finished with rib knit bands.

You claim that these garments are most appropriately considered sleepwear for tariff classification purposes since they are solely used as sleepwear, are marketed only as sleepwear and your firm is exclusively a sleepwear manufacturer. Our New York office has taken the position that these garments should be classified as shirts since they belong to the large class of merchandise known as knit shirts which are chiefly used as shirts. The apparent basis of this position is the association of the subject garments with a recent fashion trend known as the "big shirt" look.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E4

075411

In order to resolve this question, it is necessary to determine the class or kind of merchandise to which these garments belong and the chief use of such class or kind of merchandise. In support of your proposed classification, you have provided us with detailed information comparing your sleepshirt to a garment which was considered by Customs in Internal Advice No. 126/84 dated July 8, 1985, file No. 075328, to be shirts. Additionally, you conducted a survey of retailers to determine their views as to the commercial designation of your garments. The completed questionnaires were provided to Customs. Finally, marketing information as to garments similar to those involved in your inquiry was also provided.

Based on an examination of the samples and on the information that you provided, it is our view that these garments belong to the class or kind of merchandise known as sleepwear and are chiefly used as sleepwear. Furthermore, it is our view that the garments under consideration are distinguishable from garments associated with the "big shirt" look. You pointed out in your September 20, 1985, submission numerous physical differences between the subject garments and the big shirt knit garment, which was the subject of file No. 075328, the totality of which leads us to the conclusion that the garments under inquiry are sleepwear. For example, your garments measure approximately 15 inches from shoulder seam to shoulder seam in size small, and are graded up approximately three quarters of an inch in medium and again in large. In contrast, the big shirt knit garment measures approximately 27 inches from shoulder seam to shoulder seam. The hemline, neck band and sleeve cuff of the instant garments are finished with a ribbed cotton/polyester capping which is sewn with a tight needle stitch and tack stitching. On the other hand, the big shirt garment's hemline, neck band and sleeve cuff are finished by turning and stitching the edges. Furthermore, the subject garments are in chief value of cotton or in chief value synthetic fabric constructed by an interlock stitch of a low yield circular knit. This low yield circular knit is utilized in order to obtain an opaqueness in the fabric which is designed to maximize modesty and prevent a "shadow effect" when the garment is worn. The "big shirt" knit garments in contrast utilize a 100 percent cotton or chief value cotton jersey knit fabric with a high yield circular knit. This results in a garment that is sheerer than the instant merchandise. We also note that the garments under consideration have curved hemlines which is not a feature of the "big shirt" style in knit garments.

In view of the foregoing, style No. 5307 and the "Heart Pattern" and "Strawberry Pattern" styles, which are not considered ornamented for tariff classification purposes, are classifiable under a provision covering non-ornamented cotton sleepwear in item 384.3420, Tariff Schedules of the

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

ES

United States (TSUS) (category 351), dutiable at the rate of 12.3 percent ad valorem. Styles Nos. 5313 and 5314 are classifiable under the provision covering ornamented sleepwear of man-made fibers in item 384.2225, TSUS, (category 651), dutiable at the rate of 31.2 percent ad valorem.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

075444

George R. Tuttle, Esq.
3 Embarcadero Center
Suite 1260
San Francisco, California 94111

Dear Mr. Tuttle:

We have reviewed your request for reconsideration of Headquarters letter 072714 dated December 1, 1983, and believe for reasons herein indicated that that decision was correct.

Items 184.20 and 184.85, Tariff Schedules of the United States (TSUS), are the provisions in controversy. Item 184.20 provides for Beet pulp, dried and item 184.85 is a basket provision for animal feeds, and ingredients therefor, not specially provided for.

Your argument is essentially that we did not understand the facts and the product is different than we thought. Furthermore, the product is considered to be a dried beet pulp in the trade and that application of the "more than" principle would be inappropriate.

In Headquarters Ruling 072714 JH, dated December 1, 1983, we stated:

> Item 184.20, TSUS, covers beet pulp, dried and it is believed that the provision is limited to a particular condition of beet pulp. It is understood that the product is the residue remaining after the extraction of the sugar from the beet. This residue is subject to further processing by pressing and drying, and it is at this stage that it meets the definition of the product described in item 184.20, TSUS. However, in addition, the importation in question is moisturized, pelletized, and contains 14 percent sugar. In view of the addition of the molasses, the pelletizing beet pulp is more than the dried beet pulp provided for in item 184.20, TSUS, and becomes an "other" animal feed classifiable in item 184.85, TSUS.

You argue, based on the description contained on pages 4 and 5 of your submission, that the beet pellets are not moisturized and that "beet molasses" is not added to the beet pulp.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E7

It seems to us that the key question is whether "beet pulp, dried" and "dried molasses beet pulp" are the same product. You suggest they are. We think otherwise. Your argument that dried pulp with molasses is the same as dried beet pulp is based in large part on the following language set forth in USITC Publication 841 entitled "Animal Feeds and Animal Feed Ingredients" dated July 1984:

Descriptions and Uses

> Dried beet pulp is a bulky, low protein by-product of beet sugar production. It is used primarily as livestock feed. It serves as a complement to the grain rations fed to beef and dairy cattle and sheep.
>
> In its original state the beet pulp is moist and prone to spoilage within a short time. Thus, although some beet pulp is utilized moist, most is dried so as to both facilitate handling and increase storage life. Palatability to livestock is improved through the addition of beet molasses, at which time the product is marketed as dried molasses beet pulp.

You point out this language is virtually identical to the language in the 1965 edition of the Summaries of Trade and Tariff Information on item 184.20 and that since the reference to dried molasses beet pulp is contained in the section for the publication describing dried pulp, it is considered to be dried beet pulp. We disagree. The above-quoted language can just as easily be interpreted to indicate that dried molasses beet pulp is a separate commodity. In fact, page 16 of your submission states "the merchandise exported by Alberta Sugar Company to the U.S. is certified as "Western Molasses Beet Pulp."

Additional support for this point can be found in the 1929 Summary of Tariff Information. Dried beet pulp was added to paragraph 730 as part of the Tariff Act of 1922. On page 1214 of the 1929 Summary of Tariff Information, the United States Tariff Commission, in discussing experience with the new provision stated. "Statistics as to the production of dried beet pulp and dried molasses pulp, malt products, and brewers' grains are meager" (emphasis added). A clear indication that at a time close to the enactment of this tariff provision dried beet pulp and dried molasses beet pulp were considered to be different products; hence, the separate reference in the current Summaries of Trade and Tariff Information.

Essentially, it is our position that the difference between the two products continues to exist today and is well recognized in domestic and international trade.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E8

075444

In this regard, your attention is directed to Beets & Meat, Maynard & Knaus (Through the Leaves Press 1959), page 78, TABLE, entitled "Digestible Nutrient Table of Fattening Feeds" which lists "Beet Pulp dried" and "Beet Pulp dried molasses" as separate carbohydrate feeds. In addition, TABLE 11, "Calcium and Phosphorus Content of Feeds" found on page 10 of the Appendix contains separate listings for "Beet Pulp (dry)" and "Beet Pulp, Molasses (dry)." These charts are cited for the proposition that within the domestic feed community there is support for the point that dried beet pulp and dried molasses beet pulp are two different products.

Support for this point internationally may be found in the Explanatory Notes to the Customs Cooperation Council Nomenclature (CCCN). Heading 23.03 provides for the classification of beet pulp; however, the Explanatory Notes specifically state:

> Beet pulp is the residue which remains after the sugar has been extracted from the root of the sugar beet. This pulp is classified in the present heading whether wet or dried, but if with added molasses, or otherwise prepared as animal food, it falls in heading 23.07 (animal feeds).

Thus, this explanatory note serves as an example that molasses and dried beet pulp are considered to be different products internationally.

For the above reasons, we must adhere to the decision reached in 072714.

Sincerely,

Harvey B. Fox

075493

Your letter of August 14, 1985, on behalf of your client, requests the tariff classification of gold chain in continuous lengths from Mexico and whether these chains are entitled to duty-free entry under the Generalized System of Preferences (GSP).

has advised the National Import Specialist that 14K gold chains will be imported in lengths that vary from 6 feet to 20 feet.

Gold chain in continuous lengths is classifiable under the provision for rope, curb, cable, chain, and similar articles produced in continuous lengths, all the foregoing, whether or not cut to specific lengths, * * *, suitable for use in the manufacture of articles provided for in this subpart; of precious metals, in item 740.70, Tariff Schedules of the United States, and dutiable at the rate of 9.5 percent ad valorem.

The next issue to be resolved is whether the manufacturing operations performed in Mexico entitle these gold chains to duty-free entry under the Generalized System of Preferences. You state that your client intends to commence the following operation in its Mexico plant:

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E10

075493

Under the above procedures, the conversion of the gold wire from the United States into links produces an intermediate article of commerce and then the making of the gold chain constitutes a second substantial transformation of the materials into another new and different article of commerce. Therefore, if the value of the gold wire plus the direct cost of processing operations performed in Mexico total at least 35 percent of the appraised value of the finished pieces as they are imported into the United States, they will be eligible for duty-free entry under the GSP if all other applicable requirements are met.

Sincerely,

Harvey B. Fox

Mr. Y. Hatanaka
Sumitomo Corporation of America
345 Park Avenue
New York, New York 10154

Dear Mr. Hatanaka:

In your letter of June 27, 1984, you requested a classification ruling on a certain product imported by Sumitomo Corporation of America. The imported product is described by you as galvanized steel wire strand that has been flooded with asphalt. It is your position that the imported product is classifiable under the provision for strand covered with textile or other non-metallic material, in item 642.18, Tariff Schedules of the United States (TSUS).

The wire strand is used in the assembly of a cable for communications purposes. It is combined with communication wires in one of two ways: by covering with a single plastic extrusion over the wire strand and the communication wires, or by covering with a two-part plastic extrusion that separates the strand and the communication wires. The wire strand provides, in both cases, support for the communication wires. Although the asphalt may be utilized as a lubricant, no reasons were given as to why this strand was offered with or without asphalt flooding.

Tariff provisions are to be construed in their entirety. Unless otherwise indicated, the terms used in a section of the tariff law are to be construed in such a manner that they have the same meaning. In Schedule 6, Part 3, Subpart B, TSUS, the term "covered," is used to describe articles in items 642.18, 642.96, and 642.97. It is our opinion that the term is used in the same manner for each of these tariff provisions. Construction does not permit consideration of a rough coating of substances, such as asphalt, as a covering. Browning Metals Corp. v. United States, 85 Cust. Ct. 57, C.D. 4871 (1980). We distinguish, for example, the term "coated" as used in the superior language to items 642.90 642.91, and 642.93 from the term "covered" as used in items 642.96 and 642.97, as well as the provision in issue, item 642.18, TSUS.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E12

Therefore, galvanized wire strand, asphalt flooded, is properly classifiable as wire strand not covered with textile or other non-metallic material, in item 642.11, TSUS.

Sincerely,

Arthur P. Schaffner

New Canaan, Connecticut 06840

Dear Mr. Conley:

In our letter of October 31, 1985 (file 075530), we ruled on the classification of an in-line machine used to form a pulp article. This letter corrects a statement made in the first paragraph on page two of the October 31, 1985, letter, and amends the ruling.

The in-line machinery, in its condition as imported, is an unfinished machine for making pulp up into articles. Therefore, our statement that "...the in-line machinery, i.e., the forming section, the binder spraying section, and the reel section are each classifiable as machines for making cellulosic pulp up into articles, in item 668.02 ...." should be changed to read "...the in-line machinery is an unfinished machine classifiable as a machine for making cellulosic pulp up into articles in item 668.02...."

If, however, each section of the in-line machinery is imported separately, the forming section and the reel section are classifiable as parts of machines for making cellulosic pulp up into articles in item 668.07, TSUS, dutiable at 3.5 percent ad valorem (1985), and the spraying section is classifiable under the provision for other mechanical appliances for spraying liquids in item 662.50, TSUS, and dutiable at 4 percent ad valorem (1985).

Our letter of October 31, 1985 (file 075530), is amended in accordance with the conclusions in this letter.

Sincerely,

For Harvey B. Fox
Director, Classification
and Value Division

Mr. John T. Conley
Scan Web of North America, Inc.
65 Woodridge Circle
New Canaan, Connecticut 06840

Dear Mr. Conley:

In your letter of October 24, 1984, you requested a ruling on the tariff classification of certain machinery and equipment to be used in an air forming process. The equipment is a product of Denmark.

The merchandise will consist of a hammermill, blower, and in-line machinery consisting of a forming section, a binder spraying section, and a reel. The drying section, which is located after the binder spraying section, will be purchased domestically. The hammermill will be used to break up rolls of wood pulp into individual pulp fibers. The blower, located next to the hammermill, will then blow the pulp fibers into the forming section. The forming section, which is located in a separate area of the mill, is composed of two perforated rotating drums, a moving wire belt, and a vacuum box. In the forming section the fibers will be pulled from the drums onto the moving belt in order to form a continuous sheet or web. This web will then be carried by the moving belt through the spraying section where a latex emulsion will be sprayed on the web in order to bind the fibers together. After drying, the web will be rolled onto the reel. The forming section, spraying section, and roll-up section, together with the domestically purchased dryer, are designed as an in-line section.

Air forming is a process for transporting and depositing fibers to form a continuous sheet or web. It is a process which does not use a wet suspension in order to form a sheet or web.

Although the machinery in issue could be redesigned to produce a non-woven textile fabric, as designed and imported it is not capable of such use and, therefore, it is not classifiable under the provision for machines for making non-woven fabrics. In this case, the machinery is capable of using only pulp fibers of 3-5 millimeters in length which have been digested in the processing operation. Therefore, we distinguish the facts in this case from those in the ruling letter of May 29, 1984 (file 073555), in which it was held that a product, composed of cellulose and polyester fibers in excess of 4 milimeters in length that were not digested in the manufacturing process, was non-woven material rather than paper.

F1

RELEASED TO THE

The web produced on the in-line machinery in issue is an article of pulp. The in-line machinery is dedicated for this use and is not capable of producing non-woven material. Therefore, the in-line machinery, i.e., the forming section, the binder spraying section, and the reel section are each classifiable as machines for making cellulosic pulp up into articles, in item 668.02, Tariff Schedules of the United States (TSUS), and dutiable at 2.8 percent ad valorem (1985).

The hammermill and the blower are distinct machines and are not classifiable as an entirety, nor are they classifiable as an entirety with the in-line section. The hammermill, used to fiberize the pulp, is of the same class or kind of hammermills that are classifiable under the provision for machines for making cellulosic pulp in item 668.00, TSUS, dutiable at 0.9 percent ad valorem (1985). The blower is specifically provided for under the eo nomine provision for blowers in item 661.06, TSUS, and dutiable at 5.3 percent ad valorem (1985).

Sincerely,

Arthur P. Schaffer

Mr. D. K. Ward
PowerFlow, Inc.
1639 Bailey Avenue
Buffalo, New York 14240

Dear Mr. Ward:

In your letter of January 16, 1985, you requested a ruling on the tariff classification of certain products designed for use on motor vehicles.

The merchandise consists of license plate frames, window shades, and gateguards. The license plate frames are made from acrylic or similar plastic material in Canada. The window shades are made from stainless steel or plated steel in Hong Kong. They are designed to be mounted over the exterior of a window on a vehicle's door, and are said to deflect rain and reduce window fogging. The gateguards are made of extruded aluminum, chrome-plated steel, or stainless steel in Canada, Hong Kong, or Taiwan. They are designed to be attached to the top edge of pick-up truck tailgates in order to protect them from dents and paint damage.

Although these products are designed for use on motor vehicles, they are not "parts" for tariff purposes because they are not necessary for the safe and efficient operation of motor vehicles. They are more properly considered to be accessories.

The license plate frames are classified under the provision for other articles not specially provided for, of plastics, in item 774.55, Tariff Schedules of the United States (TSUS), and dutiable at 6.1 percent ad valorem if products of Canada. The window shades and the gateguards, whether of stainless steel, chrome-plated steel, or aluminum, are classified under the provision for fittings and mountings designed for motor vehicles, in item 647.01, TSUS, and dutiable at 3.3 percent ad valorem, if products of Hong Kong, Taiwan, or Canada. However, as products of Hong Kong or Taiwan, these two articles may be eligible for duty-free entry under the Generalized System of Preferences (GSP), upon compliance with the applicable regulations, copy enclosed.

MAY BE RELEASED TO THE

Pursuant to Section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304), the license plate frames, window shades, and gateguards must be permanently, conspicuously, and legibly marked to indicate the English name of the country of origin of the articles. No exception from the individual marking of the articles can be granted because we cannot agree that the nature of the articles or their manufacturing process do not admit such marking.

Sincerely,

Arthur P. Schaffer

for Harvey B. Fox
Director, Classification
and Value Division

Paul Anderson, Esq.
Sonnenberg, Anderson & O'Donell
Attorneys at Law
One North La Salle Street
Suite 3015
Chicago, Illinois 60602

Dear Mr. Anderson:

This is in reply to your letters dated January 10, 1985 and October 2, 1985, requesting reconsideration of New York Ruling Letter (NYRL) 807543 dated January 13, 1984, regarding the classification of four yogurt products under item 118.10, Tariff Schedules of the United States (TSUS), as yogurt and other fermented milk.

The imported merchandise was described in the NYRL as being:

> The production of the product, described briefly in your letter, begins with the innoculation with yogurt bacteria of a mixture (with a butterfat content of from 2.6 to 2.8 percent) of whole milk, condensed milk, and cream to make the yogurt. After the yogurt has been manufactured, sugar, pectin, carrageenan, starch, and citric acid are blended into it. The mixture is heated, homogenized, and further heated to destroy any viable microorganisms remaining in the product. Finally, fruit, which has been heat processed and cooked, is added to the mixture, which is then aseptically packed in five ounce tins by the Dole machine.

Your submission of January 10, 1985, describes the imported product to be:

> The subject merchandise is a yogurt-based product, to which fruit, sugar, starch, pectin, carrageenan, and citric acid have been added. The composition of the finished product by percentages, in terms of value, is as follows: dairy ingredients, 63.5%; fruits, 30.6%, sugar, .8%; starch, .178%; pectin, .0536%; carrageenan,

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

.037%; citric acid, .001% and water, 4.8304%. The perentage breakdown by weight is as follows: dairy ingredients, 82.593%; fruits, 10%; sugar, 5.67%; pectin, carrageenan and citric acid, 0.657%; and starch, 1.081%.

This shelf-stable product is produced by taking a yogurt base and adding fruit, sugar, starch, pectin, carrageenan and citric acid. It is processed in three steps: first, milk having 13.8% total milk solids and 3.3% butterfat is obtained by mixing whole milk, evaporated skim milk, lo-heat skim milk powder and cream. The milk is then pasteurized, cooled to 110°F and innoculated with yogurt bacteria. When the PH drops to the proper level, the yogurt is cooled. Second, a blend of dry ingredients, i.e., carrageenan, citric acid, pectin, starch and sugar, are added to the yogurt. The ingredients are mixed until blended into the yogurt. The base is then cooled to 50°F or below. As a last step, the yogurt-bases product is then heated, homogenized and further heat-treated to destroy the viable microorganisms, and then cooled. This heat-treating process is a new process and one which added unique shelf-stable characteristics to the finished product so as to distinguish it from ordinary yogurt.

Once the merchandise is subjected to this heat-treating process and fruit has been added, it is aseptically packed in teflon-coated containers so that any and all live bacteria cultures are eliminated from the product. The effect of this heat treatment upon the merchandise is to yield a product that is wholly shelf-stable and remains fresh and edible for an indefinite period of time. Ordinary yogurt would, under usual circumstances, last only forty-eight hours before spoilage. It is important to note that live bacteria is the catalyst in ordinary yogurt, without which the product would merely be milk. The bacteria provides taste and contributes to texture in its degradation process in the yogurt, and in this regard, ordinary yogurt has a very short time span within which it must be consumed. The subject merchandise has no such limitation on consumption, has a slightly different taste and texture and is not perishable.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

185510

F6

We have carefully reviewed your request for reconsideration and conclude for the following reasons that NYRL 807543 is correct.

Item 118.10, TSUS, the provision in controversy, provides for the classification of yogurt and other fermented milk. As such, item 118.10, TSUS, is an eo nomine provision.

It is basic customs law that an eo nomine designation, without limitation or a shown contrary legislative intent, judicial decision, or administrative practice, and without proof of commercial designation, will include all forms of the article. Nootka Packing Co. v. United States, 22 CCPA 464, T.D. 47464 (1935); Crosse & Blackwell Co. v. United States, 36 CCPA 33, C.A.D. 393 (1948) and cases cited; T. M. Duche & Sons, Inc. et al. v. United States, 44 CCPA 60, C.A.D. 638 (1957).

The basic thrust of your argument for reconsideration is based on the premise that, in order to be considered a yogurt, a product must contain live yogurt bacteria. Since the product in question does not contain live yogurt bacteria (it has been heat treated), it cannot be treated as a yogurt, and should be treated as a pudding classified under item 182.20, TSUS, or as an edible preparation under item 183.05, TSUS. In support of this position, you have presented statements and articles from several experts generally stating that in order to be a true yogurt, viable (live) organisms must be present. While this line of testimony may be germane to the question of whether a yogurt purist would consider a product to be a true yogurt, we do not believe it is controlling to the question of whether the product may legally be considered a yogurt.

The label on the submitted sample identifies in bold print the product to be imported as a yogurt followed by the parenthetical phrase "(HEAT-TREATED AFTER CULTURING)". The word "yogurt" on the label is both larger and in bolder print than anything else which appears on the label.

This label is in accord with the applicable Food and Drug Administration Regulation 31 CFR 131.200, which provides:

> (a) Description. Yogurt is the food produced by culturing one or more of the optional dairy ingredients specified in paragraph (b) of this section with a characterizing bacterial culture

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

185510

that contains the lactic acid-producing bacteria, Lactobacillus bulgaricus and Streptococcus thermophilus. One or more of the other optional ingredients specified in paragraph (c) of this section may also be added. When one or more of the ingredients specified in paragraph (c)(1) of this section are used, they shall be included in the culturing process. All ingredients used are safe and suitable. Yogurt, before the addition of bulky flavors, contains not less than 3.25 percent milkfat and not less than 8.25 perent milk solids not fat, and has a titratable acidity of not less than 0.9 percent, expressed as lactic acid. The food may be homogenized and shall be pasteurized or ultra-pasteurized prior to the addition of the bacterial culture and bulky flavoring material. To extend the shelf life of the food, yogurt may be heat treated after culturing is completed, to destroy viable microrganisms. (Emphasis added).

This definiton does not require that the product have a live culture. In fact, by specifically permitting heat treating after culturing, the FDA has acknowledged that live bacteria does not have to be present for a product to be considered a yogurt.

We believe that while Customs is not required to follow the FDA definition of yogurt, that definition accurately reflects the common and commercial identity of what is or may be a yogurt. Products have to meet this definition of a yogurt in order to be sold as a yogurt. The fact that the label states the product is a yogurt is further evidence of the commercial identity of the product. This is in accord with the fundamental theory of Customs jurisprudence that an imported article should be classified according to its true commercial character. Computime, Inc., v. United States, Appeal No. 85-1050, appearing on page 27 of the October 2, 1985 Customs Bulletin.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

F8

185570

You cited a number of technical definitions in support of your position. Even assuming arguendo that the imported product does not meet these technical definitions of yogurt, we do not believe that those definitions are controlling.

Tariff acts are not drafted in terms of science, but in the terms of commerce, which is presumptively that in common use, and, in the absence of a contrary legislative intent, tariff terms are not to be construed according to their scientific meaning, where that meaning differs from the common or commercial meaning. §52.5 Sturm, Customs Law and Administration 34 (1984).

In any event, a number of the definitions state that yogurt is eaten for health or diet purposes; however, it has been said, "[Y]ogurt in developed countries is used as desserts, between meal snacks, complete lunches, and diet foods. Many people eat yogurt because they like it or feel it favorably affects their health, and others cherish it for its value as a conversation piece at cocktail parties." See Frank Kosikowski, Cheese and Fermented Milk 71. Consequently, we do not believe that the marketing of the product as a dessert precludes it from being considered a yogurt for tariff purposes.

Sincerely,

Arthur P. Schaffer

District Director of Customs
Second & Chestnut Streets
Philadelphia, Pennsylvania 19106

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1101-3-000073

This protest was filed against your decision in the liquidation on February 18, 1983, of entry No. 82-356860-6, dated August 27, 1982, covering a shipment of ladies' blouses produced in Hong Kong.

This ruling concerns whether certain piping on the instant merchandise constitutes ornamentation or not.

FACTS:

The instant merchandise is Ship'n Shore's polyester woven ladies' blouse style 105303 with "disappearing piping" sewn into part of the seam between the blouse and its sleeves. This blouse is constructed in an unusual manner. The armhole of a blouse is ordinarily cut on a curve. In this instance, the seam comes to a point midway between the top of the sleeve and the bottom of the sleeve. The piping is inserted in the upper half of the armhole seam on the front and rear panels.

Counsel for the protestant claims that the piping does not constitute ornamentation and that the blouse should be classified under the provision for other women's, girls' or infants' wearing apparel, not ornamented, of man-made fibers, not knit, other, in item 383.90, Tariff Schedules of the United States (TSUS).

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

The Philadelphia import specialist believes that the piping constitutes ornamentation. She classified and liquidated the entry under the provision for other women's, girls' or infants' wearing apparel, ornamented, of man-made fibers, not knit, blouses, in item 383.22, TSUS.

ISSUE:

Does the piping constitute ornamentation?

LAW AND ANALYSIS:

Counsel for the protestant claims that the piping does not constitute ornamentation. She argues that at the shoulder area there are two or possibly three seams and that the piping runs the length of one of those seams. She cites Customs Headquarters Ruling Letter (HRL) 060888 of January 30, 1980, and HRL 068888 of October 9, 1981, in support of her position.

HRL 060888 states that there is an established and uniform practice of not considering piping to be ornamentation if it is sewn into a seam, if it extends less than 1/4 inch beyond the surface of the fabric, and if it is inserted along the entire length of the seam. HRL 060888 also states that Customs has chosen to narrowly construe this exception to ornamentation.

HRL 068888 also discusses piping and the narrowly construed practice. It quotes the American Heritage Dictionary of the English Language definition of a seam as "a line of junction formed by sewing together two pieces of material along their margins." Following this definition,

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

there are two armhole seams on each arm of the blouse in question: the seam formed by sewing the sleeve to the front piece of the blouse and the seam formed by sewing the sleeve to the back piece of the blouse. The instant piping does not run the full length of either seam; it runs only part of the way down both seams.

The piping does not meet the exception to ornamentation set forth in HRL 060888 and 068888 because it does not run the full length of the seams it is attached to. The piping therefore constitutes ornamentation, and the blouse is ornamented. The blouse is properly classified in item 383.22, TSUS.

HOLDING:

The piping constitutes ornamentation, and the instant merchandise is ornamented. The blouses, style 105303, are classified in item 383.22, TSUS.

The protest should be denied in full. A copy of this decision letter should be sent to the protestant along with the CF 19, Notice of Action.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

TO : Area Director of Customs
JFK Airport
Jamaica, New York 11430

FROM : Director, Classification and Value Division

SUBJECT: Internal Advice Request No. 13/85 Concerning the Correct Classification of "Baby Zoo" Stickers

The request for Internal Advice was initiated by a letter dated December 12, 1984, from Munford Page Hall II, Esquire, of Baker & McKenzie, representing the importer, Panini U.S.A., 645 Madison Avenue, New York, New York 10022.

FACTS:

The merchandise at issue is printed paper "Baby Zoo" stickers measuring 2-1/2 inches by 3-1/2 inches in sheets of six stickers. The stickers have an adhesive surface which is covered with a protective liner.

After importation, the sheets of stickers are inserted and stapled together with printed pages and posters into a book called "Hot Dog." The stickers are inserted sideways within the front and back covers of the book, two stickers on one side, four on the other. The sheet is perforated so that the stickers can be torn off. One sheet goes into each book. The sheets of stickers are never sold separately at retail in their imported form.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

F13

Counsel for the importer claims that the "Baby Zoo" stickers should be classified under the provision for printed matter not specifically provided for, suitable for use in the production of such books as would themselves be free of duty, in item 274.73, Tariff Schedules of the United States (TSUS). The import specialist at JFK Airport believes that the stickers are classifiable under the provision for sheets, strips, tapes, stencils, monograms and other flat shapes or forms, all the foregoing articles which are pressure sensitive, with or without protective liners, and whether or not in rolls, in item 790.55, TSUS.

ISSUE:

Are the "Baby Zoo" stickers classifiable in item 274.73, TSUS, or in item 790.55, TSUS?

LAW AND ANALYSIS:

The "Baby Zoo" stickers are pressure sensitive. "Pressure sensitive" refers to articles which have an adhesive coating on one or both surfaces which will adhere to other surfaces upon the application of pressure only.

Counsel for the importer claims that the stickers are classifiable under the provision for printed matter not specially provided for, suitable for use in the production of such books as would themselves be duty free, in item 274.73, TSUS. He claims that the stickers are parts of books which

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

075596

F14

would be classified under the provision for toy books, including coloring books and books the only reading matter in which consists of letters, numerals or descriptive words, in item 737.52, TSUS. He cites New York letter 804395, dated November 10, 1982, in support of his argument.

Counsel also argues that, while the stickers have adhesive on one side and are pressure sensitive, the imported item -- i.e., the sticker sheet comprised of the stickers plus a protective liner -- is not pressure sensitive, therefore the item cannot be classified in item 790.55, TSUS.

Finally, counsel argues that similar merchandise was classified in item 274.73, TSUS, in New York letter 810045, dated July 16, 1984.

To begin with, counsel misunderstands item 790.55, TSUS. The "Baby Zoo" pictorial animal stickers have an adhesive coating on one side. They will adhere to other surfaces upon the application of pressure only. Each sheet of stickers has a protective liner with which it is imported. The protective liners are intended to protect the pressure sensitive side of the stickers. It is not a requirement of item 790.55, TSUS, that the protective liner be coated with an adhesive or that the protective liner be pressure sensitive. The fact that the stickers themselves are pressure sensitive is enough to

075596

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

61

satisfy the requirements of item 790.55, TSUS.

New York letter 804395 is distinguishable because the "Deputy Dawg" books which were the subject of that ruling were classifiable under the provision for toy books in item 737.52, TSUS. The "Hot Dog" books in the instant case would not be classifiable under the provision for toy books because toy books are books which have very little textual matter other than letters, numbers or descriptive words. "Hot Dog" contains stories as well as puzzles and games. It would not qualify for classification under the toy book provision.

New York letter 810045 classified gummed stamp "signatures" which were intended to be used within "Hello Kitty's Stamp Fun" in item 274.73, TSUS. "Signatures," however, are printed sheets which can be folded in such a way that they form two or more pages of a book. The instant merchandise is not inserted into "Hot Dog" in such a way that it forms two or more pages in the book. Furthermore, it is evident upon reading "Hot Dog" that the stickers have no meaning and no place within the context of the book and are clearly meant to be torn from the book to be used elsewhere.

General headnote 10(c), TSUS, states that "...an imported article which is described in two or more provisions of the schedules is classifiable in the provision which most specifically describes it...." General Headnote 10(c)(ii),

075596

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

G2

TSUS, states that "...comparisons are to be made only between provisions of coordinate or equal status, i.e., between the primary or main superior headings of the schedules or between coordinate inferior headings which are subordinate to the same superior heading..." In essence, this means that item 790.55, TSUS, which is a superior heading, must be compared to the superior heading of item 274.73, TSUS. The superior heading of item 274.73, TSUS, reads "printed matter not specially provided for." While the stickers are printed, they are much more specifically provided for by the language of item 790.55, TSUS, as flat shapes or forms, all the foregoing articles which are pressure sensitive, with or without protective liners.

In Customs Headquarters Ruling Letter (HRL) 072087 of February 18, 1983, a similar classification difference was discussed. In that case, pressure sensitive printed labels were at issue. The tariff provisions discussed were other printed matter not specially provided for, other, other, in item 274.90, TSUS, and other flat shapes or forms, pressure sensitive, in item 790.55, TSUS. In HRL 072087, we concluded that the pressure sensitive element was the characteristic feature which removed the labels from the provision for printed material.

In other decisions, Customs has also classified printed matter in a pressure sensitive condition in item 790,55, TSUS.

075596

G3

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

See New York letter 809994 of July 27, 1984; New York letter 800480 of May 11, 1981; New York letter 805888 of May 20, 1983; Treasury Decision 56516(143) of 1965; Legal Determination 3611-297 of May 9, 1978; ORR Ruling 73-0178; and ORR Ruling 347-70.

We find that the "Baby Zoo" stickers are more specifically provided for under the provision for other flat shapes and forms, pressure sensitive, with or without protective liners, in item 790.55, TSUS.

HOLDING:

The "Baby Zoo" stickers are classifiable in item 790.55, TSUS. The inquirer should be notified of this decision.

Dear Sir:

Re: Decision on Application for Further Review of
Protest Nos. 4909-2-000174 and 4909-2-000175

These protests were filed against your decisions in the liquidations of seven entries covering shipments of women's T-shirts produced in Malaysia.

This ruling concerns whether a certain trademark logo constitutes ornamentation or not.

FACTS:

The merchandise at issue is women's T-shirts, 60 percent cotton and 40 percent polyester, with front and back yoke sleeves, with the trademark "Racket" in block letters on the left sleeves.

The protestant's broker claims that the trademark does not constitute ornamentation and that the T-shirts are classifiable under the provision for other women's, girls' or infants' wearing apparel, not ornamented, of cotton, knit, blouses, shirts and sweaters, in item 383.27, Tariff Schedules of the United States (TSUS).

The San Juan import specialist believes that the trademark constitutes ornamentation. The T-shirts were liquidated under the provision for other women's, girls' or infants' wearing apparel, ornamented, of cotton, other, knit, blouses, shirts, sweaters, coats, suits, trousers, slacks and shorts, in item 383.02, TSUS.

THIS DOCUMENT MAY BE RELEASED TO THE

075659

ISSUE:

Does the trademark logo "Racket" constitute ornamentation?

LAW AND ANALYSIS:

The rectangular label with the logo "Racket" measures 1 1/2 inches by 1/2 inch. The label is black with silver letters 1/4 inch high, with the exception of the letter R, which is 3/8 inch high and extends above and below the other letters. The letters are formed by use of thick and thin lines, creating a stylized effect.

In order to constitute ornamentation, a feature on a garment must serve a primarily decorative rather than a utilitarian function. Blairmoor Knitwear Corp. v. United States, 60 Cust. Ct. 388, C. D. 3386 (1968). If the label serves primarily to adorn, embellish, decorate or enhance the wearing apparel, then it must be considered ornamentation for tariff purposes. An exception has been made for relatively small, rectangular labels which contain only plain writing or plain block printing in an orderly arrangement. This exception is very narrowly construed, however, with labels excluded from consideration under the exception if anything has been done to the label which enhances its appearance and, consequently, the garment to which it is affixed. See Customs Headquarters

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

66

Ruling Letter (HRL) 072384 of April 15, 1983.

In HRL 041260 of February 27, 1976, general guidelines were developed to be applied when considering the decorative impact of labels. HRL 041260 states that "If there is an obvious attempt to attract a viewer's attention to a label by the use of varying sized letters on the label...then that label may constitute ornamentation." Letters with a stylized appearance which is obviously meant to enhance the appearance of a label would also create a decorative effect, thus constituting ornamentation. See HRL 075434 of August 27, 1985.

The protestant's broker claims that the trademark logo "Racket" which is on the left sleeve of the imported T-shirts does not constitute ornamentation. He claims that the differences in size of the lettering are not sufficient to attract attention. He also claims that the enlarged R is basically the same as the other lettering and that it does not decorate the T-shirts.

The instant label is composed of highly stylized letters with thick and thin lines. It is clearly not made of plain block letters. This stylization adds a degree of embellishment not found in plain block lettering. Furthermore, the R does stand out because of its size, extending above and below the other letters.

075659

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

The logo "Racket" does constitue ornamention. The T-shirts are classifiable in item 383.02, TSUS.

HOLDING:

The trademark "Racket" constitutes ornamentation. The T-shirts are classifiable in item 383.02, TSUS.

The protest should be denied in full. A copy of this decision should be sent to the protestant along with your CF 19 Notice of Action.

Sincerely,

Arthur P. Schifflin
Chief, General
Classification Branch

Mr. Toshiaki Furuta
Nissho Iwai American Corporation
1211 Aveune of the Americas
New York, New York 10036

Dear Mr. Furuta:

In your letter of January 16, 1985, you requested a ruling on the tariff classification of a product described as "heat pipe".

The merchandise consists of a heat pipe, available in various shapes and sizes, that has application in household appliances, industrial machinery, power transmission equipment, electrical components, and numerous other articles in which heat transfer is necessary. The heat pipe is a closed copper pipe containing a mesh wick or similar capillary structure on the inner wall, and a small amount of evaporative medium (a working fluid, such as water or freon). It operates on a simple heat transfer principle by which the working fluid vaporizes at the heat-in section (absorption of latent heat), movement of vapor to the low-temperature section, condensation of the vapor (discharge of latent heat), and flow-back of the condensate by capillary action to the heat-in section. There are six standard sizes within a range of 6.35 mm to 22.33 mm in outside diameter, and each of the six standard sizes are in lengths of 151 mm to 500 mm. Special sizes and shapes are available on request.

The diversity of uses for a "heat pipe" and the lack of specific information on chief use of each size and shape of heat pipe preclude classification as a part of any specific article. General Headnote 10(ij), Tariff Schedules of the United States (TSUS). The heat pipes can be used to make heat sinks for electronic equipment, to recover industrial waste heat, to cool motors by removing heat generated by a rotor, and for numerous other less common but increasingly significant uses.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

G9

Furthermore, the information presented is not sufficient for us to determine whether or not these heat pipes are chiefly used as parts of machinery for purposes of item 680.39, TSUS. Therefore, it is our conclusion that a general purpose heat pipe is classifiable under the provision for articles of copper (other than alloys of copper) in item 657.30, TSUS, and dutiable at 7.6 percent ad valorem. This ruling does not address the classification of specially-designed heat pipes that are chiefly or solely used on specific articles.

Sincerely,

Arthur P. Schaffner

075780

Duncan A. Nixon, Esq.
Sharretts, Paley, Carter & Blauvelt
80 Broad Street
New York, New York 10004

Dear Mr. Duncan:

This is in response to your letter dated February 25, 1985, requesting reconsideration of New York Ruling Letter 810842 dated October 17, 1984, concerning the tariff classification of a lady's jacket from Hong Kong. A sample was transmitted to this office under cover of your letter dated September 20, 1985. In addition, a conference with Richard Belanger of your Washington, D.C., office was held on October 1, 1985, to discuss this matter.

The sample is a lady's woven jacket which is in chief value of cotton. It has a full front buttoned opening which extends to include the waistband; long sleeves with buttoned cuffs; and a pointed collar. The sleeves, fronts, and back are formed by sections of fabric having been pieced together. The back of the waistband is elasticized, and the back of the garment features an expandable pleat. A placket, extending from the upper edge of the waistband to the lower edge of the neckline is covered by a textile section which covers the buttons. A pocket with a pleat and a buttoned flap closure is located on each front of the jacket. An epaulet is located on each of the padded shoulders of the unlined jacket. The epaulets are formed by strips of fabric which extend from the shoulder seam to the collar seam passing through a textile loop where they are secured by a button.

The question presented is whether functional epaulets on an unlined jacket should be considered ornamentation for tariff classification purposes. In Headquarters Ruling Letter (HRL) dated December 7, 1983, file No. 072034, we stated that "functional epaulets (epaulets which may be opened and closed) on coats and nontailored jackets have a functional capability which, absent unusual construction of those epaulets, outweigh the decorative effect which they impart to the garment" and ruled that the shoulder straps at issue did not constitute ornamentation. In HRL dated January 4, 1984, file No. 073507, a lined lightweight jacket with epaulets was also considered by Customs to be nonornamented.

In Pistol Fashions v. United States, 5 CIT 284 (1983), the court considered the ornamentation question with regard to double textile loops to epaulets. The court there stated:

> It is functional capability, together with the appropriateness of that function to the garment, which determines whether or not a feature is

G11

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

functional. Ferriswheel v. United States, 68 CCPA 21, C.A.D. 1260, 644 F. 2d 865 (1981). The two loops have the functional capability of giving the raincoat a neat appearance by holding the epaulet more firmly and flatter to the shoulder. This is evident both from the testimony presented and from the sample itself. Such a function is appropriate to the garment.

In conclusion this court finds that the double loop feature on the merchandise in issue imparts no more than an incidental decorative effect and that it does have a functionality which is primary to any ornamental effect.

5 CIT at 286.

It has been suggested by our New York office that the reasoning expressed in HRL 072034 and 073507 should not be extended to unlined jackets. That is, they would consider functional epaulets on unlined jackets to constitute ornamentation. We cannot distinguish the unlined garments involved in this ruling request from the lined garments involved in the previous rulings. The epaulets and loops on the jackets under consideration are primarily functional. Any decorative effect imparted by these features is merely incidental. The epaulets are capable of holding camera straps, binocular case straps, handbag straps, and similar type straps. The fact that these jackets are unlined does not necessarily mean that the features in question are inappropriate to the garment. The single loop holding down the epaulets serves to make the epaulets lie flat to give a neater appearance, and to reinforce the button feature.

In view of the foregoing, the jackets under consideration are classifiable under the provision for other women's wearing apparel, not ornamented, of cotton, not knit, valued over $4.00 each in item 384.3777, TSUS, (Category 335) dutiable at the rate of 8 percent ad valorem.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

477 Michigan Avenue
Detroit, Michigan 48226-2568

Dear Sir:

Re: Decision on Application for Further Review of
Protest No. 3801-4-001949

This protest was filed against your decision in the liquidation on August 3, 1984, of entry No. 84-645060, dated February 3, 1984, covering natural kraft paper rolls laminated with foil produced in Canada.

This ruling concerns the correct tariff classification of this product.

FACTS:

The merchandise at issue is rolls of kraft paper laminated with aluminum foil. Each roll measures 48 7/8 inches wide and 1500 feet in length. The kraft paper is laminated with an aluminum foil matte. This material is used as a base layer on flat industrial commercial roofs, in conjunction with other insulating components.

The protestant's broker claims that this material is paperbacked foil and should have been classified under the provision for base metal foil (whether or not embossed, cut to shape, perforated, etched, coated, printed, colored, decorated, or backed with paper or equivalent backing) not

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

A3

over 0.006 inch in thickness (excluding any coating or backing), backed, whether or not cut to shape, other, other foil, in item 644.42, Tariff Schedules of the United States (TSUS).

The Detroit import specialist contends that this material is more than foil, even paperbacked foil. He liquidated the entry under the provision for other articles of paper, not specially provided for, in item 256.90, TSUS, citing ORR Ruling 223-70, dated March 12, 1970, in support of his position.

ISSUE:

Is this material more than paperbacked aluminum foil?

LAW AND ANALYSIS:

The protestant's broker claims that the material meets the requirements of item 644.42, TSUS, because it is paperbacked foil, the foil portion of which measures 0.000285 inch in thickness. He claims that the merchandise is classifiable accordingly.

The submitted sample is composed of a layer of aluminum foil laminated to several layers of paper, resulting in a product which is relatively rigid and substantial in strength. It is in chief value of kraft paper according to the value breakdown provided by the protestant.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

075794

A4

In ORR Ruling 223-70, similar merchandise was classified. In that letter we stated "...that merchandise of this class or kind is more than foil backed with paper or its equivalent." We concluded that "...the proper provisions must be applied in accordance with the component material of chief value."

In Customs Headquarters Ruling Letter 073352 of December 16, 1983, we considered whether foam backed foil insulation could be classified in item 644.42, TSUS. We stated there that "...foam backed foil insulation containing various layers of rigid material cannot be considered aluminum foil because only a small portion of the product is made of foil." We concluded that the foil insulation was properly classified according to its component of chief value.

Finally, in HRL 029863 of May 9, 1974, we stated with regard to a similar tariff provision that "Item 644.36, TSUS, does not apply as the backing appears to be more than paper or an equivalent and is not the flexible type of backing contemplated by item 644.36, TSUS."

Looking at the composition of the instant merchandise, we conclude from an examination of the sample that the merchandise is more than foil backed with paper. The type of backing contemplated by the superior heading for item 644.42, TSUS, is of a type which supports the foil and remains flexible. The instant merchandise is relatively inflexible.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

A5

075794

Inasmuch as the material is not classifiable in item 644.42, TSUS, it must be classified according to its component of chief value. Its component of chief value is paper, therefore it is classifiable as an article of paper not specially provided for, in item 256.90, TSUS.

HOLDING:

The instant merchandise is classifiable in item 256.90, TSUS. The protest should be denied in full. A copy of this decision should be sent to the protestant along with the CF 19 Notice of Action.

Sincerely,

Arthur P. Schiffelin
Chief, General
Classification Branch

075818

DATE: 24 OCT 1985

FILE: CLA-2:CO:R:CV:G
075818 JGB

TO : District Director of Customs
127 North Water Street
Ogdensburg, New York 13669

FROM : Director, Classification and Value Division

SUBJECT: Internal Advice Request No. 120/84 - Classification of Swellex Bolts

This is in response to your request for internal advice made at the request of the importer, Atlas Copco North America, Wayne, New Jersey. It concerns the classification of a device, trademarked Swellex, to hold or secure bearing plates to the roof of a tunnel.

ISSUE:

Whether the instant merchandise is a bolt or an article of iron or steel, n.s.p.f.

FACTS:

The importer entered the merchandise claiming the classification to be under item 646.54, Tariff Schedules of the United States (TSUS), the provision for bolts of iron or steel. You reclassified the merchandise as other articles of iron or steel, not coated or plated with precious metal, n.s.p.f., in item 657.25, TSUS.

The merchandise is designed to secure bearing plates on the roof of tunnels and mines. It is referred to by the manufacturer in descriptive literature as a "SWELLEX system" that "consists of the 'bolt', an installation rod with chuck and a high pressure water pump." The "bolt" is a steel tube

A7

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

originally having an outer diameter of 41 mm and a wall thickness of 2 mm. The tube has been mechanically reshaped to an outer diameter of 25.5 mm. The device is used by inserting the longitudinally compressed tube into a pre-drilled hole and injecting high pressure water through the bushing at the end. This action expands the tube to near original size and grips the tube against the irregularities of the drill hole.

The Swellex System provides a substitute to the solid bolts that may be used in roofs of mines and tunnels.

LAW AND ANALYSIS:

The counsel for the importer has argued that the instant merchandise is a bolt and fits the common definition of that term, in that it is in the shape of a pin or a rod and is designed to hold something in place. To support this position, counsel relies on the decision in A. L. Liebman & Son, Inc. v. United States, 65 Cust. Ct. 85, C.D. 4059 (1970).

In Liebman, the Customs Court rejected Custom's position that a bolt should operate to fasten and attach things together and work with threads and a nut. The bolt is to be more broadly construed with the aid of the common meaning or definition found in dictionaries.

You have correctly noted that the instant merchandise does not in your opinion present the form of bolt, because it is not a pin or rod, but rather is a hollow tube, both before and after insertion. There is no dispute that the device

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

015818

A8

fastens and substitutes for the function of traditional mine roof bolts. However, we must recognize your claim that pins or rods are solid and not hollow, and bolts do not within their common meaning inflate with water to assume a new shape. Therefore, the claim that the Swellex system is described by the broad meaning of the term bolt must be rejected because it is not a solid pin or rod and performs in ways to distinguish it from pins and rods.

HOLDING:

The instant merchandise, the subject of entry 84-128806 at Champlain - Rouses Point, should be classified in item 657.25, as articles of iron or steel, since it is not more specifically described in the provision for bolts or elsewhere.

A copy of this decision should be sent to counsel for the importer, Jack D. Mlawski, Esq., Barnes, Richardson & Colburn, 475 Park Avenue South, New York, New York 10016.

CLA-2:CO:R:CV:G
075861 jlj

Duncan A Nixon, Esquire
Sharretts, Paley, Carter & Blauvelt
80 Broad Street
New York, New York 10004

Dear Mr. Nixon:

You requested a tariff classification concerning a men's shirt, Style 2125, for your client, M. Rubin & Sons, Inc. You submitted a sample shirt along with your request.

Style 2125 is a pullover men's woven shirt in chief value of man-made fibers. It will be manufactured in Taiwan. It has short sleeves, two pockets with zipper closures on the front and a knit waistband. The shirt has a zippered opening extending approximately half way down its front. Inserted into the seams of the front yokes are two pieces of fabric which give the shirt a U-neck "layered look" and partially conceal the zippered opening. The opening for the head on the shirt fastens together by means of three snap closures.

You argue that by providing warmth the "layered look" serves a significant purpose with respect to the character and construction of the garment, therefore the "layered look" is primarily functional. You quote from United States v. Endicott Johnson Corporation, 67 C.C.P.A. 47, C.A.D. 1242 (1980), which dealt with stitching on shoe uppers, to the effect that a feature which serves a significant purpose with regards to the character or construction of an article is functional and not merely ornamental.

We do not agree with your contention that the "layered look" on this shirt is functional. The garment is not designed primarily to be worn in cooler weather. It has short sleeves and is made predominantly of lightweight fabric. The fabric forming the "layered look" is of the same lightweight construction. Its capacity for providing warmth is negligible. The fact that the layered inserts are of a different material makes them stand out and has a decorative effect. The primary function of the "layered look" fabric is to decorate the shirt.

Inasmuch as the "layered look" is primarily decorative in nature, the shirt is classifiable under the provision for

AIO

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

ornamented men's woven shirts of man-made fibers, in item 381.31 (formerly item 379.31), Tariff Schedules of the United States, dutiable at the rate of 34.2 percent *ad valorem*.

Sincerely,

Harvey B. Fox

Mr. Stephen C. Pred
ICD Groups Inc.
641 Lexington Avenue
New York, New York 10022

Dear Mr. Pred:

This is in reference to your petition for reconsideration of a ruling issued December 27, 1984, by the New York Region in which titanium diboride made in West Germany and in powder form was classified under the provision for titanium alloys in unwrought form in item 629.14, Tariff Schedules of the United States (TSUS). The current column 1 rate of duty required under this provision is 16 percent ad valorem.

You refer to titanium diboride as an inert ceramic compound and do not believe that it is a metal alloy, because the nature of the bonds between the subparticles are not easily labeled. Therefore, it is your opinion that the product is classifiable under the specific provision for titanium compounds in item 422.30, TSUS.

It is understood that titanium diboride is an extremely hard material with a very high melting point, and it is used as a metallurgical additive, as a replacement for diamond dust in grinding/polishing materials, as a base material for cermets (ceramic-metal composite materials), and as a protective coating for metals in high temperature applications.

Under Headnote 2(a), Part 2, Schedule 6, TSUS, alloys are defined in pertinent part as "metallic substances consisting of two or more metals, or of one or more metals and one or more non-metals, intimately united, usually by having been fused together * * *." It is our position that the provision for alloys consisting of intimately united metals includes combinations of metals which are regarded as compounds, but a compound of a metal and a non-metal in a powder or other amorphous form would not be regarded as an alloy. While the information in support of your petition reflects the general scientific view presently held and held before the 1960's that boron is a non-metal, the TSUS reflects an intervening different view in its inclusion among base metals of boron in Headnote 2(b), Schedule 6, TSUS. Accordingly, regarding boron as a metal is a statutory requirement and must prevail against the weight of contrary scientific authority.

It should be also noted that titanium diboride exhibits the properties of a "metallic substance," such as electrical conductivity, hardness, etc. While we do not dispute that the merchandie is nevertheless also encompassed under item 422.30, Headnote 1(iii), Schedule 4, TSUS, where

N2

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

that item appears, specifically excludes merchandise classifiable in Part 2, Schedule 6, where item 629.14 appears, thereby requiring that the latter provision prevail. In this connection, adverse trade results which you contend may ensue from this conclusion cannot be taken into consideration in making tariff classification determinations.

Therefore, taking into consideration the cited headnote requirements as well as the characteristics and uses of titanium diboride other than those of a non-metallic nature, the tariff classification decision at issue is affirmed.

Sincerely,

Arthur P. Schaffner
for Harvey B. Fox
Director, Classification
and Value Division

075861

DEPARTMENT OF THE TREASURY

U.S. CUSTOMS SERVICE

WASHINGTON

OCT 17 1985

REFER TO
CLA-2 CO:R:CV:G
075897 JAS

District Director of Customs
610 South Canal Street
Chicago, Illinois 60607

Dear Sir:

This is our decision on Application for Further Review of Protest No. 3901-4-000116, concerning entry 880662, dated November 21, 1979, liquidated on November 14, 1983. At issue is the classification of certain AL 544 leaf chain from Japan. Background materials and briefs from counsel representing the importer/protestant were submitted.

FACTS:

Leaf chain is constructed from interlaced heat treated steel link plates. Pins of case-hardened steel with the ends riveted are used to connect the links without the use of bushings and rollers. Leaf chain is not usually applied in endless strands because it has no teeth to engage with a sprocket. Force is applied to the ends of this chain through clevises or other means of attachment through the chain pins. Changes of direction are usually made over sheaves or rollers.

Leaf chain is used where a strong, flexible linkage with little elastic stretch, and a resulting positive action is required. It is made specifically for tension linkage applications, and is used, for example, with pipe vises to grip round or irregularly shaped objects, with garage door opening devices, to anchor offshore drilling platforms which move in heavy seas, and as counterweights. However, the overwhelming use of leaf chain appears to be on the hydraulic lift mechanism of industrial forklift

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

A14

075897

trucks. In this application, linear motion is not continuous in one direction, that is, the chain must move back and forth. Fixed at the ends with clevises, the chain passes over sheaves on the hydraulically activated platen to multiply the travel of the fork. More simply stated, one end of the chain is anchored to the lift truck while the second end is wound over a sheave and fixed to the forks. As the hydraulic cylinder moves, the chain, which is unable to move itself, raises or lowers the forks.

Counsel maintains in briefs, dated March 1 and March 19, 1985, that the proper classification is under the tariff provision for other chain or chains of iron or steel used for the transmission of power, and parts thereof, in item 652.18, TSUS. The instant entry was liquidated, however, under the provision for other chain and chains of base metal, in item 652.35, Tariff Schedules of the United States (TSUS), under the authority of Internal Advice 61/79, dated November 13, 1980 (061269). This decision defined the scope of the provisions for chain or chains used for the transmission of power. Such chain was stated to be made of several pieces of metal connected by rivets, bolts, or steel screws, and so formed as to engage with the teeth of a sprocket wheel.

ISSUE:

Does the instant leaf chain belong to that class or kind of chain or chains chiefly used to transmit power?

LAW AND ANALYSIS:

Initially, counsel maintains that statistical suffix 10, for leaf chain, under item 652.18, TSUS, results in an established and uniform practice to classify leaf chain thereunder, within the meaning of section 315(d), Tariff Act of 1930, as amended (19 U.S.C. 1315(d)). We are therefore precluded, in counsel's opinion, from publishing a decision

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

B1

065897

classifying such leaf chain in item 652.35, TSUS, without invoking relevant change of practice procedures. As counsel readily admits, statistical suffixes have no legal significance in resolving tariff classification issues. Under section 315(d) of the Tariff Act, a so-called "practice" must be both established and uniform. There is no evidence of record to support the contention that a significant number of entries of leaf chain have uniformly, over a period of time, been liquidated at one or more ports under item 652.18.

As to the issue of classification in item 652.18, I.A. 61/79, in tracing the legislative history of the various chain provisions back to the Tariff Act of 1909, concluded that in the enactment of paragraph 329, Tariff Act of 1930, Congress provided for chains according to their structural makeup and whether the chain was of a type that ran over a spocket (i.e., transmits power). It was further concluded that in the enactment of the TSUS no substantive changes were contemplated or made. Counsel maintains, however, that the express language of item 652.18, chain or chains used for the transmission of power, and parts thereof, other, is clear and unambiguous on its face. In such circumstances, it is concluded, resort to legislative history is improper. Nevertheless, in its March 19 brief, at p. 5, counsel argues that Congressional intent at the time the TSUS provision was enacted is controlling.

It is uncontroverted that the provision in item 652.18 is one governed by use. We must therefore determine whether or not leaf chain belongs to that class or kind of chain chiefly used to transmit power. The overwhelming use of leaf chain, as previously described, is with industrial type lift trucks. We must therefore determine whether its use in this manner is a power transmitting application. The obvious argument in this regard is that the chain transmits power from the truck's hydraulic

B2

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

cylinder to the forks, causing them to raise or lower. Counsel maintains that the common meaning of the term "transmission of power," refers to a mechanical transmission of power in which energy in the form of motion is transmitted along the length of the chain, and is thereby transferred to some object connected to the chain, which object is thereby moved. It is our opinion that this type chain transmits power only in the most narrow and technical sense. Because it is attached to the forks and to the truck itself, it is our opinion that this chain receives or utilizes the power from the hydraulic cylinder rather than transmits it. It is the chain itself which raises or lowers the forks. This is a tension linkage application, not a power transmission application.

The major application of drive or power transmission chains is on construction equipment and the stationary drives of certain types of processing equipment. Mechanical shovels, for example, normally use chain throughout their power trains from engine to shovel mechanism. Crane crawler drives and truck mixer drives are other typical applications of drive chains in the construction equipment field. These are made of several pieces of steel, comprising pins, bushings and plates hooked to a motor. Running over a sprocket these chains transmit mechanical energy from the motor, through the chain to power another working member. In such application the chain makes any number of revolutions to transmit the power to a receiver then, theoretically, returns "empty" to take on another "load" of power. Tension linkage applications, as are believed to be involved here, evidence an oscillating or back and forth motion and only a few pitches in the total chain articulate. In the fork lift example, the chain, in our opinion, does not transmit power to the forks. The chain and fork assembly constitute an integral unit which is acted upon directly by the source of power.

B3

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

L68890

The evidence of record supports the conclusion that leaf chain is overwhelmingly used for tension linkage applications to hoist or move a load slowly or intermittently over a short distance, or to hold or position the load in place when not moving. In applications of this kind, the chain generally moves back and forth rather than continuously in one direction. Use of leaf chain in this manner precludes it from belonging to that class or kind of chain chiefly used to transmit power.

HOLDING:

The AL 544 leaf chain is properly classifiable under the tariff provision for other chain or chains of base metal, in item 652.35, TSUS.

The protest should be denied. A copy of this decision should be attached to the Form 19 Notice of Action to satisfy the notice requirements of section 174.30(a), Customs Regulations as amended by T.D. 80-271.

Sincerely,

Arthur P. Schaffner

Dear Mr. Zelman:

You requested a tariff classification covering cotton footwear uppers from the Dominican Republic for your client, Carter Footwear Inc. You submitted a sample upper along with your letter.

The submitted sample is a cotton footwear upper, Style No. 9980. It is similar to the moccasin-type boat shoe. The toe area is a moccasin-type design created by a ridge with a cord sewn on the underside. A collar of the same material as the rest of the upper runs around the top and ends at the tongue closure area. There are three pairs of eyelets in the tongue area for closure purposes. In addition, there are eight eyelets running along the collar horizontally and completely around it. A textile flat braid shoe lacing passes through these eyelets and is stitched to the interior of an overlay.

The issue is whether the shoe lacing around the collar constitutes ornamentation or not. You believe that the upper is not ornamented and should be classified under the provision for articles not specially provided for, of textile materials, other articles, not ornamented, of cotton, other, in item 386.50, Tariff Schedules of the United States (TSUS).

You claim that United States v. Endicott Johnson Corp. (Endicott Johnson), 67 CCPA 47, C.A.D. 1242 (1980), is controlling. In Endicott Johnson, the court stated that stitching without a proven function is not per se ornamental; it must be shown to have more than an incidental decorative effect. The Endicott Johnson court held not only that the stitching was functional but that it was not ornamented because it presented the same appearance as the rest of the stitching on the sneaker upper.

You contend that the conspicuousness of the lacing on the instant upper is determined by color, as was the white stitching on the white sneaker in Endicott Johnson. You believe that the instant lacing is neither eye-catching nor conspicuous and that it imparts no more than an incidental decorative effect.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

BS

075907

In addition, you claim that the lacing serves the functional purpose of distributing stress along the area in which the foot is put into the shoe and that the lacing reinforces the back of the shoe. You contend that the lacing is primarily functional rather than ornamental because of these functions.

We do not agree that Endicott Johnson is applicable to the instant merchandise. We do not believe that the conspicuousness of lacing is dependent upon color as was the case with the white stitching on white canvas sneakers. In this case the lacing, which passes in and out of grommeted eyelets, is much more substantial than stitching and is very conspicuous.

In addition, we do not believe the lacing is functional. It does not provide support around the collar, and the heel counter, rather than the lacing, reinforces the back of the shoe. Laces are defined in Webster's Third New International Dictionary as a cord or string used for drawing together two edges (as in a shoe) or to confine or compress by tightening the laces. In this case the lace performs none of these functions. It is stitched in place and is merely a fashion trend derived from the moccasin-type boat shoe.

The term "ornamented" does not embrace all the features listed in Headnote 3, Schedule 3, TSUS, but only those features, including braid, which primarily serve to adorn, embellish, decorate or enhance. Where a functional purpose served by one of those features is only incidental to the decorative effect created, that feature will cause the article to be classified as ornamented. See Blairmoor Knitwear Corp. v. United States, 60 Cust. Ct. 388, C.D. 3396 (1968). We believe that the functional strength of the lace is practically nonexistent and is merely incidental to the decorative effect it creates. Accordingly, the lacing constitutes ornamentation for tariff purposes.

New York letter 811060 of December 4, 1984, dealt with the same issue involved here and found that the footwear upper was ornamented because the lacing was nonfunctional.

The submitted sample is classifiable under the provision for articles not specially provided for, of textile materials, ornamented, of cotton, in item 386.04, TSUS, dutiable at the rate of 28 percent ad valorem.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Mr. James J. Kelly
BDP International Inc.
P.O. Box 202
Essington, Pennsylvania 19029

Dear Mr. Kelly:

This is in further response to your letters of February 18, 1985, and August 2, 1985, concerning the tariff classification of merchandise designated Minute Volumeters 2000, 2000k and 3000 to be imported by North American Drager. This merchandise is a product of West Germany.

The merchandise, variously referred to as volumeters, spirometers and respirometers, measure both inhaled and exhaled air volume for what are referred to in the submitted brochures as "numerous applications." These include measurements during anesthesia, control of spontaneous respiration postoperatively, in controlled and assisted ventilation applications, and in vital capacity determinations. The merchandise is mechanical with no electrical parts.

Since the foregoing does not establish that of these uses anesthesiology applications constitute the major use, the merchandise is classifiable under the provision for medical instruments and apparatus, other than those more specifically provided for, in item 709.27, Tariff Schedules of the United States. The current column 1 rate of duty required under that provision is 10.4 percent ad valorem.

Sincerely,

Arthur P. Scheffler

for Harvey B. Fox

075959

Louis S. Shoichet, Esq.
Siegel, Mandell & Davidson, P.C.
Counselors at Law
One Whitehall Street
New York, New York 10004

Dear Mr. Shoichet:

In a letter dated April 2, 1985, written on behalf of Dynamic Classics, Ltd., you inquired as to the tariff classification of certain soft sided luggage produced in Korea.

The merchandise involved consists of various sized standard rectangular shaped soft sided luggage made of leather and man-made fiber materials. A representative sample, style No. 2202-3, was submitted for examination. This sample is an expandable canvas carry-on bag measuring 21 inches by 13 inches by 8 inches when closed. In its expanded condition the 8 inch gusset extends to 14 inches. The bag is constructed with full zipper closures, webbed fabric carrying handles, webbed fabric shoulder strap and includes the following leather components.

(1) Two top sections on both the front and back of the bag. Each measures 21 inches by 2.5 inches.

(2) One strip on each end gusset which measures 6 inches by 2.5 inches.

(3) Two handle grips each measuring 5.25 inches by 1.5 inches.

(4) Eight strap tabs each measuring 5.25 inches by 1 inch.

(5) Two pieces of "D" ring holders each measuring 3 inches by 1.5 inches.

(6) Two half-oval tabs at the zipper ends measuring 1.5 inches by 1.25 inches.

We cannot advise you as to the dutiable status of those styles where neither samples nor complete component material breakdowns by value have been submitted. Consequently, our response will be directed to the sample before us.

It should be noted that the value breakdown submitted is not complete in that it does not reflect component costs at a point prior to final assembly.

38

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

075959

The issue to be resolved is whether the value of the leather components is to be disregarded in determinig the component material of chief value of the sample carry-on bag.

It is your view that the costs of the leather components must be included in determining the component material of chief value of the bag. Further, you maintain that in accord with the cost breakdowns submitted the various styles are in chief value of leather requiring their classification under the provision for other luggage of leather in item 706.13, Tariff Schedules of the United States (TSUS), with duty at the rate of 8.5 percent ad valorem.

Schedule 3, Headnote 3(c), TSUS, provides that "applique work, beads, bugles, spangles, bullions, and other forms of nontextile ornamentation applied to a textile fabric or other textile materials shall be disregarded in determining the component material of chief value of such fabric or other article."

It has been contended that certain of the leather components are not primarily functional but rather are decorative since the decorative nature of the trim transcends the functional use.

It is our view that none of the leather components constitutes ornamentation for the following reasons:

(1) The two pieces of leather, 6 inches by 2.5 inches, which cover a seam are in the form of straight strips which are not appliques and do not constitute ornamentation for tariff purposes. See United States v. Hamburger Levine Co., T.D. 34382 (1914); Alfred Kohlbert Paint v. United States, T.D. 49394 (1938).

(2) The two top sections which are cut to a curved shape are not similar to the vinyl overlay on the back of a glove which this office held to be ornamentation in Headquarters Ruling letter (HRL) 075477/811034 dated February 4, 1985. This construction is not an overlay since it is sewn to and not over the textile material. It should be noted that if these sections were removed we would not have a complete bag.

(3) The handle grips of leather measuring 5.25 inches by 1.5 inches are in strip form and do not constitute ornamentation for tariff purposes.

(4) The two half-oval tabs at the zipper ends are functional rather than ornamental because they complete the zipper.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B4

(5) The eight strap tabs sewn in pairs to plastic D rings are primarily functional and do not constitute ornamentation. In HRL No. 075175 c of December 6, 1984, and HRL No. 075392 of January 17, 1985, this office held that the amount of braid present on braided D-ring strap attachments was not significant because it did not really change or affect the nature of the articles. These rulings are not relevant because the issue therein was whether the presence of the braided strap attachments really changed or affected the nature of the articles whereas the issue here is the functionality of the eight strap tabs.

In view of foregoing the sample bag is classifiable, if in chief value of leather, under the provision for other luggage of leather in item 706.13, TSUS, and dutiable at the rate of 8.5 percent ad valorem.

If the sample is in chief value of textile materials, it would be classifiable under the provision for luggage of other textile materials in item 706.4152, TSUS, and dutiable at the rate of 20 percent ad valorem. The applicable textile quota category number is 670. Luggage produced in Korea is currently subject to textile quota restraints.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

REFER TO

CLA-2:CO:R:CV:G
076015 c

076015

District Director of Customs
610 S. Canal Street
Chicago, Illinois 60607

Dear Sir:

Re: Application for Further Review of Protest No. 3901-4-000654

This protest was filed against your decisions in the liquidation on March 2, 1984, of entry No. 84-525565 dated January 3, 1984, and in the liquidation on March 9, 1984, of entry No. 84-525566 dated January 3, 1984, covering shipments of vinyl cases for manicure sets produced in Hong Kong.

FACTS:

The merchandise involved consists of vinyl cases for men's manicure sets and printed floral "purse portable" manicure cases. Samples have been submitted by counsel for the protestant. The carry case for the men's manicure set measures approximately 4-1/4 inches by 3-1/4 inches in a folded condition. The printed floral case is a tri-fold snap case which is similar in size and use as a key case. It is constructed of a clear PVC sheeting over a clear PVC coated printed fabric.

The above described merchandise was classified in liquidation under the provision for other flat goods of other material in item 706.61, Tariff Schedules of the United States (TSUS), with duty at the rate of 20 percent ad valorem.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

B11

The protestant claims that the cases are properly classifiable under the provision for containers of rubber or plastics, with or without their closures, chiefly used for the packing, transporting, or marketing of merchandise in item 772.20, TSUS, and entitled to free entry under the Generalized System of Preferences (GSP).

In support of its claim the protestant cites New York Ruling letter (NYRL) No. 808288 dated February 22, 1984, holding that PVC pouches with inserts to hold various manicure instruments are classifiable under item 772.20, TSUS.

The protestant also states that samples of the subject merchandise were provided to our New York office along with a request for a non-binding ruling dated December 28, 1983. A copy of customs Form 4313 (non-binding ruling) dated January 10, 1985, has been submitted to us by the protestant. That form indicates an opinion that the vinyl pouches used for the packaging of manicure sets are classifiable under item 772.20, TSUS.

ISSUE:

1. Were the subject cases in fact covered by NYRL 808288 dated February 22, 1984?

2. Are the cases chiefly used for the packing, transporting or marketing of merchandise?

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

B12

576015

LAW AND ANALYSIS:

Based on information provided by our New York office and counsel for the protestant we conclude that the subject cases were in fact covered by NYRL 808288 dated February 22, 1984. Therefore, following that ruling the merchandise which is the subject of this protest is classifiable under the provision for containers of rubber or plastics, with or without their closures, chiefly used for the packing, transporting, or marketing of merchandise in item 772.20, TSUS, and entitled to free entry under the GSP.

After a review of the matter it is our position that the result reached in NYRL 808288 is erroneous. In order to be classified under item 772.20, TSUS, it must be shown that the manicure cases are chiefly used for the packing, transporting, or marketing of merchandise. The chief use of an article is that use which exceeds all other uses combined.

When used by consumers the instant cases will be used as flat goods presumably carried on the person in the purse or pocket. They are not chiefly used as containers for packing, transporting, or marketing of merchandise and therefore classification under item 772.20, TSUS, is precluded.

It is now our position that the vinyl cases in issue should be classified under the provision for other flat goods of other material in item 706.61, TSUS, with duty at the rate of 20 percent ad valorem.

B13

THIS DOCUMENT MAY BE RELEASED TO THE

076015

In accord with section 177.9(d), Customs Regulations, NYRL 808288 dated February 27, 1984, is hereby revoked. Merchandise of the type covered by this decision entered or withdrawn from warehouse for consumption after the date of this letter will be classified under item 706.61, TSUS.

HOLDING:

The protest should be allowed. A copy of this decision should be attached to the Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

802556

Mr. John F. McManus
Deputy Manager, Customs Duty Team
C. Itoh & Co. (America) Inc.
335 Madison Avenue
New York, New York 10017

Dear Mr. McManus:

You asked us to ascertain whether New York letter 802556 dated May 11, 1982, had been modified or revoked. You included a copy of New York letter 802556 with your letter.

That letter classified Cordley, a plastic substitute for leather, under the provision for film, strips, sheets, wholly or almost wholly of rubber or plastics, not of cellulosic plastics, flexible, other, in item 771.43, Tariff Schedules of the United States (TSUS). Cordley is composed of a polyester fiber web layer, a foamed polyuethane layer and a layer of unexpanded polyurethane.

Following H.R. 3398, Tariff and Trade Act of 1984 (Public Law 98-573), effective November 14, 1984, the new Headnote 2 to Part 12, Schedule 7, TSUS, was added to the tariff schedules. Headnote 2 reads as follows: "This part does not cover fabrics, coated or filled, or laminated, with rubber or plastics provided for in Part 4C of Schedule 3." Inasmuch as Cordley is a fabric coated with plastics, Headnote 2 would apply to it.

It is our view that the legislation adding Headnote 2 to the tariff schedules revoked all prior rulings (including New York letter 802556) covering the subject matter (i.e., plastic and textile in a combination producing imitation leather).

Sincerely,

Arthur P. Schaffner

812506

076153

Mr. Larry Perla
Fathom Dive Suits
6500 South Orange Avenue
Orlando, Florida 32809

Dear Mr. Perla:

Your letter dated December 13, 1984, to our New York office concerning the appropriate tariff classification of a scuba diving accessory known as a weight stabilizer has been referred to this office for direct reply to you. A sample was forwarded along with your request.

The weight stabilizer is a belt that fits around the waist of a scuba diver. The belt has compartments with a flap closure secured by velcro. Weights are to be placed in these compartments. The belt has a velcro closure with a rectangular textile label on the outside of the closure. The label ornaments the belt in accordance with Schedule 3, Headnote 3, Tariff Schedules of the United States (TSUS). The three layer laminated fabric consists of a middle layer of neoprene rubber sandwiched between two layers of knit fabric. The knit fabric is made from 100 percent man-made fibers.

The weight belt counteracts the buoyancy of the human body and air tanks. Additionally, it serves a safety function. When the diver becomes disoriented so that he is unable to distinguish between the surface and the bottom the diver feels the pull of gravity on the weight belt to regain his orientation.

Headnote 1 of Schedule 7, Part 5, Subpart D provides that "this subpart covers equipment for indoor or outdoor games, sports, gymnastics, or athletics." The weight belt falls within this headnote since it is a necessary requisite for the sport of scuba diving. As noted above, it serves a safety function as well as counteracts buoyancy. However, Headnote 1(v) excludes "other wearing apparel, other than specially designed protective articles such as, but not limited to, gloves, shoulder pads, leg guards, and chest protectors." While the instant weight stabilizers are both

C2

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

"equipment" and "designed for use" for the sport of scuba diving, they are not protective as the exemplars in Headnote 1(v). Thus, for purposes of Schedule 7 these weight stabilizers are excluded as non-protective "wearing apparel".

On the other hand, these weight stabilizers cannot be considered "wearing apparel" for purposes of Schedule 3. The Customs Court has long held that the term "wearing apparel" as used in Schedule 3 covers articles worn for decency, comfort or adornment. Antonio Pompeo v. United States, 40 Cust. Ct. 362, C.D. 2006 (1958). Accordingly, the instant merchandise is not "wearing apparel" as contemplated in Schedule 3.

It is our view that the weight stabilizer subject to your inquiry is most appropriately classified under the provision for man-made textile materials, not specially provided for, ornamented in item 386.1343, TSUS. This is consistent with previous Headquarters rulings on pistol belts and cartridge belts.

In view of the foregoing, this merchandise is classifiable in item 386.1343, TSUS, dutiable at the rate of 15 percent ad valorem. Duty-free treatment under the Generalized System of Preferences would apply if all requirements are met. However, articles classifiable in item 386.1343, TSUS, are not eligible for duty-free treatment under the Caribbean Basin Initiative.

Sincerely,

For Harvey B. Fox
Director, Classification
and Value Division

076168

District Director of Customs
111 West Huron Street
Buffalo, New York 14202

Dear Sir:

Re: Decision on Application for Further Review of
Protest No. 0901-3-000509

This protest was filed against your decision in the liquidation on October 31, 1983, of Buffalo entry No. 83-337829-7, dated September 12, 1983, covering a shipment of Magicards produced in Canada.

This ruling covers the correct tariff classification of Magicards.

FACTS:

The merchandise at issue is plastic cards, called Magicards, imported for use by individuals such as college students as discount cards which would entitle the people to discount benefits when they purchase merchandise.

The protestant's broker claims that the Magicards are intangibles under General Headnote 5(d) of the Tariff Schedules of the United States (TSUS) and are exempt from duty.

The Buffalo import specialist believes that the Magicards should be classified as other articles of plastic, not specially provided for, in item 774.55, TSUS.

ISSUE:

Are the Magicards intangibles?

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

4

LAW AND ANALYSIS:

The broker claims that the Magicards are similar to certain coupons covered by ORR Ruling 579-68 of August 28, 1968, which were found to be intangibles under General Headnote 5(d), TSUS.

The Buffalo import specialist argues that the coupons involved in ORR Ruling 579-68 were already redeemed for their cash value and that the discount cards will not be used in the same way. The import specialist also points to Customs Headquarters Ruling Letter (HRL) 073136 of October 25, 1983, in which personalized credit cards were found not to constitute intangibles, as evidence that the Magicards should be subject to duty.

General Headnote 5(d), TSUS, covers intangibles and states that "For the purposes of headnote 1 -- securities and similar evidences of value. . .are not articles subject to the provisions of these schedules."

The merchandise in question, the State University of New York at Buffalo Student Association Magicard, is valid in its imported condition. No endorsement nor other validation is required. This fact distinguishes the cards from the credit cards of HRL 073136 and brings them within the scope of Internal Advice 69/77

076168

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

(HRL 052235 of January 31, 1978). In HRL 052235 blank traveller's checks were found to be intangibles under General Headnote 5(d), TSUS.

The essential point is that the Magicards have no intrinsic value as articles but are valuable only as evidence that certain amounts of money are owed or available. See HRL 073136 of October 25, 1983, HRL 071075 of December 14, 1982, HRL 070181 of December 3, 1982, HRL 052235 of January 31, 1978.

We find that the Magicards are intangibles under General Headnote 5(d), TSUS, and, as such, are exempt from duty.

HOLDING:

The Magicards are intangibles under General Headnote 5(d), TSUS, and are exempt from duty. The protest should be allowed in full. A copy of this ruling letter should be sent to the protestant along with the CF 19 Notice of Action.

Sincerely,

Arthur P. Schaffner
for Harvey B. Fox

076189

John B. Pellegrini, Esq.
Ross & Hardies
220 East 42nd Street
20th Floor
New York, New York 10017

Dear Mr. Pellegrini:

This is in response to your letter dated May 6, 1985, concerning the appropriate tariff classification of boys' and girls' jackets to be manufactured in Korea. A representative sample was provided along with your request.

The sample is a lined, lightweight pullover garment without a full front opening. Its shell and lining are nylon. The garment has a zippered opening at the neck which extends approximately twenty percent of the length of the jacket. It also features epaulets, slash pockets in the lower front of the jacket, a pocket at the chest, and elasticized sleeve cuffs and waistband. While the sample provided does not have a hood, you indicate in your letter that some of the jackets to be imported will feature permanently attached hoods. You also indicate in your letter that the importer intends to alter these garments by creating full front openings and inserting zippers subsequent to importation.

The question raised in your ruling request is whether these garments are to be considered unfinished jackets and consequently classifiable under the provision for jackets or to be considered pullovers. Customs has recently issued two rulings on pullovers which were also to be further processed in the United States by the creation of full front openings and insertion of zippers. Headquarters Ruling Letter (HRL) dated April 25, 1985, file No. 075657, and HRL dated May 13, 1985, file No. 076157. The garments in these two rulings were not considered commercially viable garments because of the weight and construction of those garments. Both garments contained a polyester fiberfill insulation. The sample that you provided us in connection with this ruling request is distinguishable from those garments since it is a lightweight pullover with no insulation. It is our view that the instant merchandise is a commercially viable pullover garment in its condition as imported. This is supported by the extracts that you provided from the 1984 Pacific Trail Boys and Girls Catalogue and the L. L. Bean Summer 1985 Catalogue, both of which depict garments similar to the garments involved in this ruling request.

The presence of epaulets on the instant merchandise raises the question of whether epaulets on pullovers constitute ornamentation. Customs has ruled that functional epaulets, i.e., epaulets which may be opened and closed on coats and nontailored jackets do not constitute ornamentation since such epaulets have a functional capability which,

c1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

absent unusual construction of those epaulets, outweigh the decorative effect which they impart to the garment. HRL dated December 7, 1983, file No. 072034. As pointed out in that ruling, it is the feature's functional capability, together with the appropriateness of its function to the garment, which determines whether or not a feature is functional. Ferriswheel v. United States, 68 CCPA 21, C.A.D. 1260 (1981). The epaulets on the instant merchandise do not have the capability of holding camera straps, binocular case straps, handbags straps, and similar straps. The weight of any of these items would easily rip the stitching on the loops which hold the epaulets down. In other words, such a capability is not appropriate to the lighweight pullover at hand. Thus, it is our view that the epaulets are primarily decorative warranting classification of the instant merchandise as ornamented.

In view of the foregoing, the boys' garments are classifiable under the provision for "other men's or boys' wearing apparel, ornamented: of man-made fibers: not knit: other" in item 381.9838, Tariff Schedules of the United States (TSUS) (category 659), dutiable at the rate of 31.2 percent ad valorem. The girls' garments are classifiable under the provision for "other women's, girls', or infants' wearing apparel, ornamented: of man-made fibers: not knit: other" in item 384.9405, TSUS, (category 659), dutiable at the rate 31.2 percent ad valorem. The attachment of a hood would not normally affect the classification of a garment. However, we are unable to give you a definitive answer as to the classification of the garments featuring permanently attached hoods without the provision of a sample.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

U.S. CUSTOMS SERVICE
WASHINGTON

28 OCT 1985

REFER TO
CLA-2 CO:R:CV:G
076268 jlj

District Director of Customs
2039 Federal Office Building
909 First Avenue
Seattle, Washington 98174

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 3004-3-000181

This protest was filed against your decision in the liquidation on September 16, 1983, of entry No. 83-812589-8, dated September 28, 1983, covering brass etchings produced in Canada.

This ruling concerns the correct tariff classification of the brass etchings.

FACTS:

The merchandise at issue is brass etchings produced in Canada. According to the broker's description accompanying the protest, the plates are made by causing an acid to corrode the metal portion of the brass plates, which are not covered or protected by an acid-resistent covering.

The protestant's broker claims that the brass etchings are classifiable under the provision for etchings, printed not over 20 years at time of importation, other, in item 274.70, Tariff Schedules of the United States (TSUS).

The Seattle import specialist liquidated the brass etchings under the provision for articles of copper, not coated or plated with precious metal, other, in item 657.35, TSUS.

ISSUE:

Are the brass etchings made in the above described manner considered to be made by a printing process and thus eligible for classification under the provision for etchings in item 274.70, TSUS, or must they be classified in the basket provision for other copper articles in item 657.35, TSUS?

C9

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

LAW AND ANALYSIS:

The merchandise in question is brass sheets with pictorial matter etched on them.

The protestant's broker claims that the brass etchings are classifiable under the provision for etchings in item 274.70, TSUS. He cites ORR Ruling 74-0170 of August 6, 1974, in support of his position.

Headnote 1 of Schedule 2, Part 5, TSUS, states that: "...this part covers only printed matter consisting essentially of textual and pictorial matter produced by any printing process...." Item 274.70, TSUS, appears within Part 5 of Schedule 2, TSUS, and Headnote 1, supra, applies to it.

The Blaine, Washington, import specialist believes that the etchings covered by item 274.70, TSUS, are limited to the prints produced by an etched plate by virtue of Headnote 1, supra. He points out that the instant articles are etched plates and not printed matter produced from plates.

The common meaning of the tariff term "printing" has been found to apply to the art or practice of impressing letters, characters, or figures on paper or other material by means of types, plates, or the like. In Perry Ryer & Co. v. United States, 28 Cust. Ct. 153, C.D. 1403 (1952) (aff'd 41 CCPA 18, C.A.D. 524 (1953)), the court had to decide whether a certain paint or lacquer depositing procedure was printing. It said:

> In this connection, it will prove instructive to examine the following definitions of the words "print" and "printing"....
>
> These definitions at once suggest that the words "print" and "printing" connote the act of stamping, impressing, or transferring letters, characters, or figures by pressure from a die, plate, type, or other device.

C10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

The acid corrosion process by which the instant plates were made does not meet this judicially construed definition of "printing." The plates were not produced by any printing process within the meaning of Headnote 1, supra, and therefore they cannot be classified within Part 5 of Schedule 2, TSUS, in item 274.70, TSUS.

The brass etchings are properly classified as other copper articles in item 657.35, TSUS.

HOLDING:

The brass etchings are classified in item 657.35, TSUS. The protest should be denied in full. A copy of this decision should be sent to the protestant along with the CF 19 Notice of Action.

Sincerely,

Arthur J. Schaffer
for Harvey B. Fox
Director, Classification
and Value Division

Ms. Angela De Gaetano,
U.S. Customs Service
Customs Information Exchange
6 World Trade Center, Room 200
New York, New York 10048

Dear Ms. De Gaetano:

A Customs Form 6431 dated September 29, 1982, received in this office on May 21, 1985, from the port of Champlain, New York, concerns entry No. 82-464350 dated September 16, 1982, covering a shipment of furniture from Canada to Art Distributors Inc., Pelham Manor, New York. This difference of opinion is listed as the ninth item on page 1 of C.I.E. N-42/75, Supplement 43, dated August, 1985.

The merchandise at issue is china hutches in chief value of wood, Item No. 1212H3. The issue presented is whether the hutches are classifiable under the provision for furniture, of wood, other than bent-wood, furniture other than chairs, in item 737.35, Tariff Schedules of the United States (TSUS), or under the provision for furniture, of wood, other than bent-wood, parts of furniture, in item 727.40, TSUS.

The sending port argues that the hutches are classifiable as wood furniture other than chairs in item 727.35, TSUS. The sending port contends that the hutches are complete units of furniture and that they are "functionally usuable" as they are. The sending port cites Internal Advice 193/75 (Customs Headquarters Ruling Letter (HRL) 041619 of November 24, 1975) in support of its position.

The replying port argues that hutches are classifiable under the provision for parts of furniture, of wood, in item 727.40, TSUS, because the hutches are not designed to be placed on the floor or the ground; they must be placed on a buffet or another piece of furniture in order to be used. The replying port agrees that the hutches are complete but argues that they are not usable as they are because they must stand on something in order to be functional. Inasmuch as the hutches are neither floor standing nor functional as they are, the replying port believes that the hutches are parts of furniture rather than furniture.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

C12

Internal Advice 193/75 (HRL 041619) deals with sectional furniture on vertical poles. Its basic premise is that for an item to be classified as furniture it must contain all components necessary to make it usable to the ultimate consumer; neither a substantial nor an essential part of the item can be missing.

In the case of the instant merchandise, the absence of an essential part (i.e., a buffet or other piece of furniture for the hutch to stand on) precludes the classification of the hutch as furniture. It is our opinion that the hutch, being incomplete, is properly classifiable as parts of furniture in item 727.40, TSUS.

Sincerely,

Arthur P. Schaffner

Mr. Leo R. Dubiel
Rigidized Metals Corporation
658 Ohio Street
Buffalo, New York 14203

Dear Mr. Dubiel:

In your letter of May 6, 1985, you inquire as to the tariff classification of certain design-strengthened textured metals from the UK. Brochures were submitted.

Your company is importing stainless steel sheets which have be subjected to the so-called black INCO process, which we understand is a treatment which protects or improves the properties or appearance of the sheets. A letter from the Area Director of Customs, New York Seaport, dated May 13, 1985, confirmed the proper classification to be in item 607.90, Tariff Schedules of the United States (TSUS). You now state that a competitor is importing similar she from the UK which, in addition to the described surface t eatment, have been textured or embossed. This results in a different tariff classification and lower duty rate. Inasmuch as this places your company at a competitive disadvantage, you question the disparity in tariff treatment between the two products.

tially, we presume the steel sheets meet the Schedule 6, Part Subpart B, Headnote 2(h)(iv), TSUS, definition of stainless steel, that is, an alloy steel which contains by weight less than 1 percent of carbon and over 11.5 percent of chromium, and that they are within the Headnote 3(g), TSUS, definition of sheets, that is, flat rolled products whether or not corrugated or crimped, in coils or cut to length, under 0.1875 inch in thickness and over 12 inches in width. If so, the subject plates would be classifiable under the provision for plates and sheets of stainless steel, in item 607.90, TSUS, dutiable at the rate of 10 percent ad valorem, plus additional cumulative duties required by Headnote 4, plus further additional duties required by a temporary tariff modification in item 926.00, TSUS, currently 6 percent ad valorem.

Although the sheets you import have been subjected to a surface finishing similar to anodization, they remain classified in item 607.90, TSUS. The ANCO black processing is a treatment which protects or improves the properties or appearance of the metal sheets.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

C14

It is permitted by Schedule 6, Part 2, Headnote 1, TSUS, as a treatment which does not thereby preclude the stainless steel sheets from classification in item 607.90, TSUS, as basic shapes and forms of steel.

However, if the surface-treated stainless steel sheets are subjected to an embossing or similar texturing process, they are processed beyond the types of treatments permitted by Schedule 6, Part 2, Headnote 1, TSUS. Furthermore, the cited definition for steel sheets provides for "flat rolled products whether or not corrugated or crimped." The textured ANCO black stainless steel sheets are not "surface treated" or "corrugated or crimped" within the meaning of the headnotes governing item 607.90, TSUS. Texturing is a process which would advance the sheets beyond the category of a basic shape or form. This is apparently the situation with respect to your competitor. Absent a more specific tariff provision for this textured product, Customs has classified these sheets under the provision for other articles of steel in item 657.25, TSUS, dutiable at rate of 6.7 percent ad valorem.

Copies of the cited headnotes and tariff provisions are enclosed for your reference.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Mr. Irwin Luxenberg
Jacques Moret, Inc.
1350 Broadway
New York, New York 10018

Dear Mr. Luxenberg:

Your letter dated May 13, 1985, requests reconsideration of Internal Advice Request No. 70/84, file 074678 dated April 24, 1985, in which two-piece exercise suits were classified separately.

The merchandise in question involved style 5098, a short sleeve knit shirt with a round neck composed of 65 percent polyester and 35 percent cotton and a suspendered nylon panty with a cotton gusset inside the crotch. The two pieces are tacked together at the shoulders. The other exercise suit is style 4307, consisting of two color coordinated pieces composed of 58 percent polyester and 32 percent cotton. The upper section is a round neck sleeveless top with two narrow fabric ties extending below the waist for about eight inches. The lower section is a panty with the cotton gusset inside the crotch. The garment is worn with the ties fastened and a portion of the midriff exposed.

You contend that the traditional view of a body suit no longer applies to the subject merchandise. In your view, body suits have undergone changes in fabric and construction.

In Customs estimation, the presence of two pieces destroys the identity of the subject merchandise as a body suit. The determination that body suits are one-piece garments for tariff purposes is fully consistent with the common meaning of the term "leotard" which we regard as coequal with a body suit. A leotard is defined in various lexicons as follows:

> Leotard - 1. A snugly fitting elastic garment originally worn by dancers or acrobats. The American Heritage Dictionary, 1976.
>
> Leotard - 1. Short, close fitting without sleeves, low in neck, fitted between legs. Worn by acrobats, trapeze performers, etc.
>
> 2. Modern adaptation of the acrobat's garment, usually made of knitted wool, ankle and wrist length and high-necked, worn under jumper dress. The Fashion Dictionary, Mary Booth Picken, 1973.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

D2

Based on the foregoing definitions which contemplate coverage of the torso by a one-piece garment, we believe the subject garments are not within the ambit of the common meaning of the term "leotard" or "body suit."

The components covering the upper body in styles 4307 and 5098 belong to a class or kind of merchandise that are bought and sold as tops or shirts. Then too, combining these tops with a panty-like garment for marketing purposes to create a fashion item does not control the garment's classification. The Customs Service follows the rule expressed in a multitude of court cases that the merchandising medium is not always determinative of the classification of goods for tariff purposes. See Borneo Sumatra Trading Company v. United States, 64 Cust. Ct. 185, C.D. 3980 (1970) and Rubenderrie and Company, Inc. v. United States, 76 Cust. Ct. 187, C.D. 4659 (1976).

Nor are these two styles classifiable as entireties, because the components of style 4307 and 5098 retain their individual identities and are not subordinated to the identity of the resulting combinations.

Furthermore, although we agree with your claim that the suspendered panty must be worn with a top, it can be worn with any top not just the top with which it is sold.

Therefore, we adhere to our decision in our response to Internal Advice Request No. 70/84 that two-piece body suits are classifiable separately for tariff purposes.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Savannah, Georgia 31401

Dear Sir:

Re: Decision on Application for Further Review of Protest Nos. 1703-3-000355, 1703-4-000010 and 1703-4-000038

Protest No. 1703-3-000355 was filed against your decision in the liquidations on October 7, 1983, of entry Nos. 364298 dated January 28, 1983, and 364563 dated February 25, 1983. Protest No. 1703-4-000010 was filed against your decision in the liquidations on October 21, 1983, of entry Nos. 367693 dated September 16, 1983, and 367695 also dated September 16, 1983. Protest No. 1703-4-000038 was filed against your decision in the liquidations on December 28, 1983, and December 23, 1983 of entry Nos. 367317 dated August 25, 1985, and 367803 dated September 28, 1983.

FACTS:

The merchandise involved in these Applications for Further Review consists of waist trimmers and thigh trimmers. The waist trimmer is approximately 7-3/4 inches wide and 38 inches long. The inside of the waist trimmer is foamed or expanded neoprene rubber with a 2 inch wide male velcro strip extending along the width of one side of the trimmer. The outside of the waist trimmer is a knit nylon fabric with a plush finish. This fabric appears to be bonded to the rubber surface. This fabric serves as the female velcro closure so

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D4

that the user can fasten the velcro for any size waist. The advertising claims on the packaging of the waist trimmer consist of the following:

.One size fits all
.Trims, firms and tones the waist
.Stimulates body heat around midsection
.Helps support lower back and abdomen
.Easy to use - wear while exercising or working
.Helps improve posture
.Top grade neoprene core with nylon outer surface
.Self-adhesive velcro closure.

The thigh trimmers also consist of foamed or expanded neoprene rubber worn against the skin with a tightly knit nylon fabric bonded on the outside. However, the thigh trimmers have no velcro, but are joined by an overcast sewn side seam. The user puts the thigh trimmers on by pulling the trimmer up to the knee with the fabric on the inside, against the user's leg. The user then grasps the bottom edge of the trimmer and flips it up over the thigh so that the rubber side is against the thigh. The advertising claims for the thigh trimmers consist of the following:

.Helps trim, firm, and tone the thighs
.Stimulates body heat to help prevent muscle pulls
.Easy to use - wear while exercising or working
.Top-grade neoprene core with nylon outer surface

The waist trimmer was classified under the provision for girdles and corsets in item 376.28, Tariff Schedules of the United States (TSUS), and the thigh trimmer was classified under the provision for textile articles not specially

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

DS

provided for, of man-made fibers, in item 389.62, TSUS. At that time, no component material cost breakdown was made available to Customs. Protestant contends that the waist trimmer is not properly classifiable in item 376.28, TSUS, since this merchandise should not be considered wearing apparel for tariff classification purposes. Rather, protestant claims that the most appropriate classification for both the waist and thigh trimmers is under the provision for sports equipment in item 735.20, TSUS. Alternatively, protestant urges that the trimmers be classified according to their component material in chief value, i.e., neoprene rubber, in item 770.80, TSUS. In support of its claim that the waist and thigh trimmers are in chief value of neoprene rubber, protestant has submitted a letter dated July 8, 1985, forwarding the component material cost breakdown which was furnished by protestant's supplier of the waist and thigh trimmers.

ISSUE:

The proper classification of waist and thigh trimmers.

LAW AND ANALYSIS:

Protestant challenges the correctness of classification of the waist trimmers under the provision for corsets, girdles, brassieres, and similar body-supporting garments in item 376.28, TSUS. The first question posed is whether the waist trimmer should be considered a garment for tariff classification purposes. If it is considered a garment, the

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D6

question raised is whether it is a similar body-supporting garment to corsets, girdles and brassieres or a body-supporting garment for men and boys.

Webster's New World Dictionary (2d College Ed., 1974) defines garment as "any article of clothing." Clothes in turn are defined as "articles, usually of cloth, designed to cover, protect, or adorn the body; wearing apparel; garments; attire." It is our view that these waist trimmers are not garments since they serve none of the functions traditionally associated with garments or clothing. Moreover, the waist trimmers at issue are not body-supporting garments similar to corsets, girdles or brassieres. First, the waist trimmers are not undergarments as are corsets, girdles or brassieres. Second, the primary function of the waist trimmer is to assist the wearer to lose inches rather than to support the body or to make the wearer appear slimmer. This is in contrast to the merchandise involved in Headquarters Ruling Letter (HRL) dated October 21, 1980, file No. 064486, which was viewed by Customs to be "primarily intended to make the wearer appear slimmer" thereby belonging "to a class of merchandise primarily used in this country in a manner similar to a girdle or corset." Finally, the waist trimmers are not body-supporting garments for men and boys since they are used by both men and women. Thus, the waist trimmer was

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D7

076332

improperly classified under the provision for corsets, girdles, brassieres, and similar body suppporting garments in item 376.28, TSUS.

Protestant urges classification of the waist trimmers as well as the thigh trimmers as sports equipment in item 735.20, TSUS. Schedule 7, Part 5, Subpart D, Headnote 1 states that "this subpart covers equipment designed for indoor or outdoor games, sports, gymnastics, or athletics." It is our view that the waist and thigh trimmers are not "equipment designed for indoor or outdoor games, sports, gymnastics, athletics." In other words, these articles are not the type of equipment contemplated by Headnote 1. The advertising accompanying this merchandise makes clear that these trimmers are specifically designed and constructed to assist the user to lose inches. Losing weight or appearing trimmer is not one of the purposes set out in Headnote 1. The fact that these articles may be used during periods of exercise or athletic periods is irrelevant since they are not specially designed for the purposes set forth in Headnote 1. Therefore, classification in Schedule 7, Part 5, Subpart D is not appropriate.

Headnote 4(b) to Schedule 3, TSUS, provides that for purposes of the tariff schedules:

> In determining the component fibers of chief value in coated or filled, or laminated, fabrics and articles wholly or in part thereof, the coating or filling, or the nontextile laminating substances, shall be disregarded in the absence of context to the contrary.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Applying Headnote 4(b), Schedule 3, TSUS, the neoprene rubber should be disregarded in determining the component fibers in chief value. Consequently, both the waist and thigh trimmers should be classified under the provision for knit articles in item 389.40, TSUS.

HOLDING:

In view of the foregoing, all the merchandise involved in these protests, which includes both waist and thigh trimmers, should have been classified in item 389.40, TSUS. However, it appears that the entries which included the waist trimmers may have been liquidated under a duty rate, as provided for in item 376.28, TSUS, that may be higher than actually applicable. Since item 389.40, TSUS, imposes a compound duty rate, as opposed to a straight ad valorem rate as imposed by 376.28, TSUS, we are unable to determine which provision carries the higher rate of duty. Therefore, you should allow the protests, in part, to the extent that the duty on the waist trimmers classifiable in item 389.40, TSUS, is less than the liquidated duty. However, if the liquidated duty for the waist trimmers classifiable in item 376.28, TSUS, is less than it would be when classified in item 389.40, TSUS, then the protests should be denied in whole.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

076322

D9

With regard to those entries which included the thigh trimmers, the liquidated duty is less than that if classified in item 389.40, TSUS. Accordingly, the protests concerning this merchandise should be denied in full.

A copy of this decision should be attached to the Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Gentlemen:

The ruling of November 5, 1982 (804184), concerned your interest in importing Nofluor, a mixture of polyimadazoline, ethylene glycol and water. The product was classified as a mixture of two or more organic compounds in item 430.20, TSUS, dutiable at the rate for polyhydric alcohols in item 428.34, TSUS, of 13.1 percent ad valorem.

Recently, it has come to our attention that the product may have a benzenoid component, a condensation product from terephthalic acid and triethlenetetramine. Accordingly, if the polyimadazoline compound has a benzenoid structure, the product is classifiable under the provisions for mixtures in item 407.16, TSUS, dutiable at 1.7 cents per pound plus 13.6 percent ad valorem.

Sincerely,

Arthur P. Schaffner

076352

Mr. Gilbert Donaldson
The Jennings Company
P. O. Box 10126
Savannah, Georgia 31412

Dear Mr. Donaldson:

You have requested the tariff classification of a man's shirt. A sample garment was provided along with your request dated May 10, 1985.

The submitted sample is a man's woven shirt manufactured from a fabric that is a blend of 65 percent polyester and 35 percent cotton. It has long sleeves, a breast pocket, cuffs with button closures, a full front placket opening with button closures and a finished neckband. The shirt is shipped in a polybag with a collar attached to the neckband by means of three buttons. In the polybag there is an extra collar with a collar bar. It can be fastened to the neckband by means of three buttons after the first collar is detached.

You claim that the extra collar is classifiable under the provision for other men's or boys' wearing apparel, not ornamented, of man-made fibers, not knit, other in item 381.9892, Tariff Schedules of the United States (TSUS), formerly item 379.9692, effective September 1, 1985. The category designation is 659. It is your position that collars of man-made fibers are included in category number 659, because cotton collars are classifiable under the eo nomine provision for cotton collars in item 381.57 (formerly item 379.56) designated as category number 359.

In the absence of an eo nomine provision for collars of man-made fibers, the extra collar is classifiable under the provision for other men's wearing apparel, not ornamented of man-made fibers, other in item 381.9844, TSUS, which is included in textile category 640. The collar is contained in the statistical annotation for parts of shirts.

Although the shirt may be worn without a collar, we believe that usually the shirt will be worn with one of the collars because of the buttons on the neckband. In view of General Headnote 10(h), TSUS, regarding the classification of unassembled articles as an assembled entirety, the shirt with one collar is classifiable under the provision for other men's shirts, not ornamented of man-made fibers in item 381.9535, TSUS, in category 640.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

D12

The collar pin is classifiable separately in item 740.3800, TSUS, under the provision for jewelry and other objects of personal adornment.

Sincerely,

B. Fox

Memorandum

DEPARTMENT OF THE TREASURY
UNITED STATES CUSTOMS SERVICE

DATE: OCT 18 1985

FILE: CLA-2:CO:R:CV:G
076354 JAS

076354

TO : District Director of Customs
Seattle, Washington 98174

FROM : Director, Classification and Value Division

SUBJECT: Classification of the Book States of War: Whether Printing by Offset is "Lithographic" for Tariff Purposes

The subject book, imported by the Seattle Art Museum, is said to consist of reproductions of works of art with minimal text, bound together in the form of a book. You state the sample is no longer available.

The book was classified under the tariff provision for lithographs on paper: not over 0.020 inch in thickness, in item 274.60 Tariff Schedules of the United States (TSUS), dutiable at the rate of 6 cents per pound. This classification was based upon our decision in Internal Advice 178/82, dated July 11, 1983 (070778), and Protest Review Decision, dated May 5, 1983 (072090). The importer, on the other hand, maintains that the proper classification is under the provision for books not specially provided for, in item 270.25, TSUS, subject to entry free of duty. It is claimed that this book was printed by an offset process which is not "lithographic."

You cite various Dictionary of Paper definitions of "lithography" and "offset" and conclude that Customs has uniformly regarded offset printing as a type of lithography. In these circumstances, you request a ruling that offset printing is lithographic printing for tariff purposes, and that the subject book is properly classifiable in item 274.60, TSUS.

The "essentially pictorial" versus "essentially textual" criteria, and variations thereof, which have traditionally governed disputes in classification where items 270.25 and 274.60 are involved, formed the basis for the decisions of May 5 and July 11, 1983. It must be emphasized, in accordance

D14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

with the ruling letter of April 8, 1981 (066125), quoted in our July 11, 1983 decision, that each case must be decided on its own merits. Consequently, lacking a copy of the subject book, which would allow us to view the pictorial and textual matter in context, we are unable to confirm its classification.

The provision in item 274.60 is one defined eo nomine, and includes all forms of the named article. In this connection, where a tariff phrase or term is not statutorily defined, as is the case here, it is the common meaning of that phrase or term which will normally control. In this connection, The Dictionary of Paper, 4th. Ed. (1980), published by the American Paper Institute, Inc., defines the term LITHOGRAPHY as follows:

> The original meaning of lithography was based on the affinity of a greasy surface for printers' ink, the ink being also repelled by a damp surface. It involved the preparation of designs on a stone with a special crayon or liquid drawing medium and the production of printed impressions therefrom on a flat-bed press.

This source further defines the term OFFSET, in part, as follows:

> A technique in printing by which the ink images are transferred from the plate first to an intermediate rubber blanket and then to the material being printed. This technique, which reduces plate wear and permits printing on rougher material, is most commonly associated with lithographic printing. For this reason, the word "offset" alone is sometimes used to indicate offset lithography. (Emphasis added).

The underscored language suggests the possibility that an offset technique may be used in a non-lithographic printing process. For this reason, we cannot categorically state that

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

E'

in all instances the terms "offset" and "lithography" may be regarded for tariff purposes as interchangeable or synonomous, despite the fact that in many instances Customs has regarded this as so.

In our opinion, the importer should be given an opportunity, within a period of time you determine to be appropriate, to present evidence that the plates used to print the subject book involved a process of engraving in relief (letterpress), or one involving an image sunken below the surface (gravure), as opposed to a process of lithographic printing of the planographic (flat plane) type. In this regard, a microscopic examination of the sample book under at least ten power magnification is recommended. In the absence of such convincing evidence submitted by the importer, to include the resubmitting of the subject book, we recommend that you use the cited administrative precedents to support classification in item 274.60, being mindful that the importer still has the protest remedy in Part 174, Customs Regulations, available to him.

Arthur P. Schaffner

Jamaica, New York 11430

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-4-005262

This protest was filed against your decision in the liquidation on January 27, 1984, of entry No. 4701-84-726935-0 dated November 4, 1983, covering a shipment of men's pullovers.

FACTS:

The merchandise involved in this application for further review consists of a man's lightweight short sleeve pullover garment. It can be worn either as outerwear or as a shirt. The garment features epaulets approximately 1 inch wide which extend from the neckline seams to the shoulder seams where the epaulets pass through loops and are fastened by snap closures at mid-shoulder.

The epaulets on these garments were considered by Customs to constitute ornamentation. Consequently, this merchandise was classified in item 379.08, Tariff Schedules of the United States (TSUS). Based on a recent court case, Europe Craft Imports, Inc. v. United States, Court No. 84-1-00111 (February 4, 1985), involving identical epaulets on a lined lightweight jacket with a full front opening, protestant claims that the epaulets do not ornament the garments in question and that such garments are properly classifiable in item 379.64, TSUS.

PUBLIC DOCUMENT MAY BE RELEASED TO THE

E3

ISSUE:

Whether epaulets on an unlined pullover garment constitute ornamentation.

LAW AND ANALYSIS:

Epaulets identical to the ones at issue on lightweight lined jackets have been conceded to be non-ornamental in Europe Craft Imports Inc. v. United States, supra. The Government admitted in that case "that the functionality of the epaulets in question is primary to any ornamentative nature." It is our view that it is not possible to make a distinction between the epaulets on the garments involved the Europe Craft Imports case and those involved in the instant protest since they are identical. As noted by the court, these epaulets open and close, and have the capability of holding camera straps, binocular case straps, handbag straps, and similar types of straps and articles. Furthermore, we cannot say that epaulets in question are inappropriate to this garment simply because the garment lacks a full front opening or is unlined. However, it should be noted that the appropriateness of the feature to the garment in question must be determined on a case by case basis.

HOLDING:

In view of the foregoing, the epaulets on the pullover garment involved in this protest do not constitute ornamentation. Consequently, this merchandise should have been classified in item 379.64, TSUS. Therefore, you should grant this protest in full.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

071362

UNITED STATES GOVERNMENT
Memorandum

DEPARTMENT OF THE TREASURY
UNITED STATES CUSTOMS SERVICE

DATE: OCT 10 1985

FILE: CLA-2:CO:R:CV:G
076441 EMS

076441

TO : District Director of Customs
Buffalo, New York 14202

FROM : Director, Classification and Value Division

SUBJECT: Internal Advice Request No. 102/84 Concerning the Tariff Treatment of Comic Supplements for Sunday Newpapers

In your memorandum dated August 27, 1984, you requested internal advice on the tariff classification of comic supplements to Sunday newspapers. Internal Advice was initiated in response to a letter dated August 9, 1984, from Greater Buffalo Press (GBP), asking that Customs reconsider its practice of classifying imported comic supplements under the provision for other printed matter in item 274.85, Tariff Schedules of the United States (TSUS).

FACTS:

The merchandise involved in this internal advice consists of comic supplements for Sunday newspapers imported from Canada through the ports of Buffalo and Detroit. In its letter dated August 9, 1984, requesting internal advice GBP claims that while all comic supplements to Sunday newspapers have been classified over the past ten years under the provision for printed matter, not specially provided for, susceptible to authorship in item 274.85, TSUS, such merchandise is more appropriately classifiable as periodicals in item 270.63, TSUS, since comic supplements are within the scope of the term "periodicals" as set forth in Headnote 2(c),

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

EG

Schedule 2, Part 5. Also noted as supporting classification as periodicals are the Summary of Trade and Tariff Information, USITC Pub. No. 841 (1983) which mentions comic supplements for Sunday newspapers as an example of periodicals classifiable in item 270.63, TSUS, and the 1977 Census of Manufacturers, Industry Series, Commercial Print and Manifold Business Forms 27B-21, Item 27511 17, which classifies comic supplements as periodicals.

On October 29, 1984, GBP made an additional submission maintaining that this merchandise should be classified as periodicals and advancing the argument that classification otherwise would be contrary to the Florence Agreement. Additional submissions were then made by counsel for GBP on January 25, 1985, April 25, 1985, June 13, 1985, August 29, 1985 and September 4, 1985. In its submissions, counsel made numerous arguments. Most notably, counsel brought to our attention a court case, New York Daily News v. United States, 65 F. 493 (2d Cir. 1895) and argued that this case was controlling and mandated classification of this merchandise under the periodicals provision.

In response to an inquiry made by this office, the American Newspaper Publisher Association stated its position in a letter dated August 29, 1985, that comic supplements are regarded as sections of Sunday newspapers by the industry as a whole. The Association also expressed the view that comic supplements meet the tariff definiton of periodicals.

E7

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Throughout the pendancy of this request for internal advice, Customs in New York has taken the position that this merchandise should not be considered a periodical for tariff classification purposes but is classifiable as other printed matter in item 274.85, TSUS, relying on, inter alia, Headquarters Ruling Letter (HRL) dated May 23, 1975, file No. 035595, which held that comic supplements for Sunday newspapers are classifiable in item 274.85, TSUS. Based on Kraemer & Co. v. United States, 5 Ct. Cust. App. 66, T.D. 34099 (1914) Customs has taken the position that a publication must be sold separately to be classifiable as a periodical.

ISSUE:

Whether comic supplements to Sunday newspapers should be considered periodicals for tariff classification purposes.

LAW AND ANALYSIS:

Headnote 2(c), Schedule 2, Part 5 provides that:

> [T]he term "periodicals" embraces only paper-covered or unbound publications issued regularly at stated periods, such as weekly, monthly, or quarterly, and bearing the date of issue.

As reflected in HRL 035595, Customs has not considered comic supplements to qualify as periodicals for purposes of classification in item 270.63, TSUS. Rather, we have viewed such supplements to be parts of newspapers and have classified such merchandise under the provision for other printed matter in item 274.85, TSUS, since there is no provision for parts of newspapers.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E8

076441

After considering the extensive briefing by both New York Customs and GBP, we are convinced that the comic supplements at issue meet the headnote 2(c) criteria for "periodicals." These comic supplements are publications which are issued regularly at stated periods, i.e., weekly, and bear the date of issuance. Moreover, we believe that New York Daily News v. United States, supra, is dispositive of the question whether comic supplements for Sunday newspapers are "periodicals" for tariff classification purposes. In interpreting a predecessor statute */ to Headnote 2(c), the Second Circuit found that an eight-page German language pictorial paper, entitled "New York Lustige Blatter," imported to be used as a supplement to the German edition of the New York Sunday News, should be considered a periodical for tariff classification purposes. The supplement involved in the 1895 case was a "funny paper" consisting of stories, poems, selections of German humor, and other literature. It is our view that the merchandise involved in this request for internal advice is indistinguishable from that involved in New York Daily News.

As mentioned previously, Customs has taken the position that a publication must be sold separately to be classified as a "periodical." See, e.g., HRL dated September 10, 1984, file No. 074582 where Customs ruled that the Parade supplement

*/The tariff provision defining the scope of the term "periodical" that was considered in New York Daily News is substantially the same as the headnote 2(c) definition. The only significant difference between the earlier and present law, which is not relevant to the issue under consideration, is that the prior law required that the publication contain current literature of the day.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

to Sunday newspapers should not be classified as "periodicals" since the supplement was not issued separately. Upon reconsideration of this question, it is our view that this requirement of separate sale is not supported by the statute nor the case law. As noted above, the comic supplements at issue meet all the criteria specified in Headnote 2(c), Schedule 2, Part 5. To require that a publication be separately sold would read an additional requirement into the law. Moreover, neither Kraemer & Co. v. United States, supra, nor Cunard White Star, Ltd. v. United States, T.D. 49422 (Cust. Ct. 1938) which relied on Kraemer warrants such a reading of the statute. The merchandise involved in Kraemer consisted of 70,000 colored illustrations for use as pages in a magazine published in the United States. These pages bore no date nor page numbering and contained no reading matter. The statute in effect at the time defined "periodicals" as "unbound or paper-covered publications issued within six months of the time of entry, devoted to current literature of the day, or containing current literature as a predominant feature, and issued regularly at stated periods, as weekly, monthly, or quarterly, and bearing the date of issue." The court concluded that the merchandise at issue were not appropriately considered "periodicals" based on the following rationale:

> Taken alone they [the illustrations] contained no literature of the day, they bore no date of issue, nor were they intended for separate publication. It is also true that while they were peculiarly suitable for use in connection with

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

> the August, 1912, number of the Studio magazine and were intended for use as part of that edition, and that similar illustrations were to appear concurrently in the English edition of the same number, nevertheless the imported illustrations were not incapable of other uses.

5 Ct. Cust. App. at 68. Thus, the court found that the illustrations at bar could not be considered periodicals since they met none of the statutory requirements. They contained no literature and bore no date of issue. It has been suggested that the acknowledgement by the court in Kraemer that the illustrations were not intended for separate publication is authority for Customs view that a publication must be sold separately in order to qualify as a periodical. We cannot agree with this interpretation of Kraemer. Rather, we believe that the court's statement merely meant that the pages were imported to be physically joined to something else. Thus, we do not believe that Kraemer changes the principle enunciated in New York Daily News. Similarly, the merchandise involved in Cunard White Star, Ltd. v. United States, supra, is distinguishable from that involved in New York Daily News and the merchandise involved in this internal advice. Relying on Kraemer, the court in Cunard White Star found that a one-time promotional insert devoted to the S.S. Queen Mary did not qualify as a periodical for tariff classification purposes.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

E11

The conclusion that the comic supplements at issue meet the headnote 2(c) definition of "periodicals" does not necessarily mean that this merchandise is not part of a newspaper. Indeed, General Headnote 10(ij), TSUS, recognizes that parts of articles may be classified as articles in their own right. The American Newspaper Publishers Association, whose membership consists of about 1,400 daily newspapers, representing more than 90 percent of the nation's daily and Sunday newspaper circulation, states that "comic supplements are regarded as sections of the Sunday newspaper by the industry as a whole". Webster's New World Dictionary (1974) defines "section" as "a part or division of a book, newspaper, etc." Supplement is defined by that dictionary as "a separate section containing feature stories, comic strips, or the like, issued with a newspaper." Thus, we believe that a comic supplement to a Sunday newspaper is commonly and commercially known as part of a newspaper. However, in view of General Interpretive Rules 10(c) and 10(ij) this merchandise is most appropriately classifiable as periodicals in item 270.63, TSUS.

With regard to changes in practice or position, Customs regulations, 19 C.F.R. §177.10(c)(1) provides in relevant part that:

> Before the publication of a ruling which has the effect of changing a practice and which results in the assessment of a higher rate of duty, notice that the practice (or prior ruling on which the practice is based) is under review will be published in the Federal

E12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

> Register and interested parties given an opportunity to make writen submissions with respect to the correctness of the contemplated change. The procedure will also be followed when the contemplated change in practice will result in the assessment of a lower rate of duty and the Headquarters Office determines that the matter is of sufficient importance to involve the interests of domestic industry.

Assuming that a practice exists with regard to the classification of comic supplements, a change in that practice would result in a lowering in the rate of duty. Consequently, it would be necessary to ascertain whether the lowering of the duty rate with regard to this merchandise is of sufficient importance to involve interests of domestic industry to require publication of notice in the Federal Register. The available information indicates that classification of comic supplements for Sunday newspapers under the provision for periodicals in item 270.63, TSUS, is not of sufficient importance to involve the interests of domestic industry. The market served by GBP's Canadian subsidiary is the Great Lakes region, in which GBP's market share is substantial. Furthermore, the views of the American Newspaper Publisher Association, which represents newspapers that print their own comic supplements, was sought and the Association expressed its view that comic supplements are appropriately considered "periodicals" for tariff classification purposes.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

E13

076441

HOLDING:

In view of the foregoing, comic supplements to Sunday newspapers are classifiable under the provision for "periodicals" in item 270.63, TSUS. Consequently, HRL 035595 and 074582 are hereby revoked. Any additional rulings inconsistent with this advice should be modified accordingly.

You should inform the inquirer of this ruling.

Gail T. Cumins, Esq.
Attorney at Law
Sharretts, Paley, Carter & Blauvelt, P.C.
80 Broad Street
New York, New York 1000[illegible]

Dear Ms. Cumins:

This is in response to your brief dated June 13, 1985, and attached exhibits filed on behalf of Canon Inc. in which the tariff classification of various types of lens systems which are for television cameras and which your client imports is requested. Brochures included with the exhibits depict, among others, lenses for electronic newsgathering (ENG) cameras.

It is your position that various types of motorized lens systems for ENG cameras are classifiable under the provision for parts of television cameras in item 684.90 (formerly item 685.10), Tariff Schedules of the United States (TSUS). The current column 1 rate of duty required under that provision is 4.7 percent ad valorem when the exemption from duty under the Generalized System of Preferences (GSP) is not applicable. While your contentions in support of this position are essentially a recapitulation of various arguments of the type we received from those opposing our proposed change of practice and which resulted in continuation of the practice in our notice in T.D. 85-4 published in the Federal Register on January 9, 1985 (50 FR 1044), your main disagreement is with our decision of June 20, 1984, file No. 074363. You contend that that decision, if not revoked, at least requires clarification. We held in that decision that ENG lenses were not within the practice.

[redacted]revious reconsideration of that matter date[redacted], that decision was modified, and moto[redacted] ENG cameras are now considered as within the [redacted]rdingly, any box-type lens system depicted in the submitted brochures which can only be operated remotely through electrical servomechanisms for zoom, iris and focus, whether or not such operation is manual or automatic, will be regarded as within the practice and classifiable under the provision for parts of television cameras in item 684.90. All ENG and other barrel-type lenses which are depicted in your submitted exhibits, for which there is provision for optional

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

F1

manual operation for any single parameter without the use of an electrical servomechanism, and which in their condition as imported have one or more servomechanisms attached, are similarly classifiable.

It is not clear to us from an examination of the brochures and other descriptive material presented whether the depicted lenses, if imported without any attached servomechanisms, would be properly classifiable as mounted lenses in item 708.23, TSUS. If the lenses imported in that condition are no more than lenses "fixed [mounted] in a proper backing, support or setting," then classification under item 708.23, TSUS, would be proper. Kalimar, Inc. v. United States, 66 Cust. Ct. 112, C.D. 4178 (1971); Rank Precision Industries, Inc. v. United States, 85 Cust. Ct. 34, C.D. 4866 (1980). Item 708.23, TSUS, is a GSP-eligible item currently requiring a column 1 rate of duty of 8.1 percent ad valorem for noneligible merchandise. In the event the depicted lenses, if imported without any attached servomechanisms, nevertheless include other significant electrical or mechanical components, classification of those lenses as other optical instruments or appliances under item 708.89, TSUS, would be appropriate. The latter provision is also GSP-eligible, but carries a rate of duty of 12.4 percent ad valorem for noneligible merchandise.

Sincerely,

(signed) J. T. Roth

District Director of Customs
Patrick V. McNamara Bldg.
477 Michigan Avenue
Detroit, Michigan 48226-2568

Dear Sir:

Re: Request for Further Review of Protest No. 3801-5-000027, dated October 3, 1984

This protest concerns the tariff classification of a turnbuckle, hook arm, hook body and barrel from Canada.

These items were held classifiable as an entirety under the provision for turnbuckles in item 646.78, Tariff Schedules of the United States (TSUS).

The protestant claims that the hook arm, body and 1/2 inch barrel are not provided for specifically in 646.78, TSUS. Rather, these items should be classified as parts of yachts or pleasure boats in item 696.15, TSUS.

As noted by the district director, HRL 046254 DB, dated October 14, 1976, provides evidence that these items are classifiable as an entirety in item 646.78, TSUS. The protestant has not submitted any descriptive literature or a sample to substantiate classification as boat parts. All that has been submitted is the entry form which is a self-serving document.

Accordingly, it is our determination that these items are classifiable in item 646.78, if imported together, or in item 657.25, if imported separately.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

F3

This protest should, thus, be denied in full. A copy of this decision should be forwarded to the protestant along with your Form 19 Notice of Action.

Sincerely,

Arthur V Schuffler
for Harvey B. Fox

076538

Mr. William K. Myers
Senior Buyer
C. R. Daniels, Inc.
3451 Ellicott Center Drive
Ellicott City, Maryland 21043

Dear Mr. Myers:

In a letter dated June 28, 1985, you inquired as to the dutiable status of two handbags produced in the Dominican Republic. You also ask whether the imported handbags will be eligible for duty-free treatment under the Caribbean Basin Initiative (CBI) and, if not, what conditions would have to be met in order to qualify for partial duty relief under item 807.00, Tariff Schedules of the United States (TSUS).

Style No. 1155 measures approximately 12 inches by 10-1/2 inches and has a 6 inch bottom gusset. It has double cotton web handles, a snap closure, and two exterior zipper closed pockets. The body is made of cotton canvas.

Style No. 1269 measures approximately 13 inches by 9 inches with a 5 inch bottom gusset. This bag has a top zipper closure, a small interior zippered pocket, and an adjustable cotton web shoulder strap. The body of the bag is made of cotton canvas. Leather is used to trim the top zipper, reinforce the two bottom seams, and to attach the shoulder strap to the bag.

You suggest that style No. 1155 is classifiable under the provision for other handbags, of vegetable fibers and not of pile or tufted construction: of cotton in item 706.36, TSUS, with duty at the rate of 9.2 percent ad valorem. As to style No. 1269, you maintain that it is in chief value of leather and classifiable under the provision for handbags of other leather, valued not over $20.00 each in item 706.07, TSUS, and dutiable at the rate of 10 percent ad valorem.

Based on the value information submitted, we agree that style No. 1115 is properly classifiable under item 706.36, TSUS. However, we do not agree with your suggested classification of style No. 1269 for the reason that when the total cost of all textile components are considered, those values exceed the value of the leather. The combined values of the brushed cotton canvas, ribbed cotton web, and cotton thread indicate cotton to be the textile in chief value. Consequently, style No. 1269 is also dutiable at the rate of 9.2 percent ad valorem under item 706.36, TSUS. Articles classifiable under item 706.36, TSUS, are excluded from duty free entry under the CBI.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

The assembly operations, described in attachments identified as cutting sheets, consist of cutting to proper length such components as tapes, bindings, zippers, and leather strips and merely assembling the remaining exported components together by stitching with thread to produce finished handbags.

With respect to the assembly of products abroad, item 807.00, TSUS, applies to already-fabricated United States components which are designed to be fitted together with other components in an assembly process, with no further fabrications performed thereon except for the assembly of the components to form the imported merchandise and operations considered incidental thereto. Duty is assessed on the difference between the total value of the imported merchandise and the cost or value of the exported components.

Based on the samples and information submitted, we are of the opinion that allowances may be made under item 807.00, TSUS, for the value of those components of United States origin that are exported in condition ready for the foreign process without the need for further fabrication. So long as the imported fabric is cut to pattern size-and-shape while in the United States before being exported, the component fabric would be regarded as an American product for purposes of the tariff provision. Mere dyeing, finishing, and brushing the imported fabric would not be sufficient to transform foreign made fabric into an American product.

It should be noted that a substantial transformation must result in the emergence of a new and different article having a distinct name, character, or use different from that previously imported and amounts to something more than a mere finishing of imported goods.

Sincerely,

Arthur P. Schaffner

SUBJECT: Internal Advice Request No. 32/85 Concerning the Tariff Classification of a Child's "Zoo" Shoe

FACTS:

The child's "Zoo" shoe involved has a "partial cup sole." This term means that the outsole and a 1/2 inch high sidewall are a single piece of rubber, but the sidewall does not encircle the entire shoe. In this instance the sidewall is 5 inches long and encircles only the front third of the shoe.

The inquirer maintains that the overlap on this shoe is confined to its toe which requires classification of the shoe under the provision for other footwear which is over 50 percent by weight of fibers and rubber or plastics with at least 10 percent by weight being rubber or plastics and having uppers of which not over 90 percent of the exterior surface area is rubber or plastics: other: footwear having soles (or midsoles, if any) of rubber or plastics which are affixed to the upper exclusively with an adhesive (any midsoles also being affixed exclusively to one another and to the outsole with an adhesive); valued not over $6.50 per pair in item 700.61, Tariff Schedules of the United States (TSUS), with duty at the rate of 37.5 percent ad valorem.

57

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

It is your position that the sole on this shoe overlaps the upper other than at the toe requiring classification under the provision for other footwear which is over 50 percent by weight of fibers and rubber or plastics with at least 10 percent by weight being rubber or plastics and having uppers of which not over 90 percent of the exterior surface area is rubber or plastics: other: footwear with soles which overlap the upper other than at the toe or heel: other: valued over $3.00 but not over $6.50 per pair in item 700.67, TSUS, with duty at the rate of 90 cents per pair plus 37.5 percent ad valorem.

ISSUE:

Does the 1/2 inch sidewall present on the "Zoo" shoe constitute an overlap of the upper other than at the toe or heel?

LAW AND ANALYSIS:

It is our position that the sole on the sample shoe overlaps the upper other than at the toe or heel. In this context it is clear that the sidewall is part of the sole because it is part of the same molded piece of rubber as the outsole. While it is also clear that the overlap occurs only in the front third of the shoe and that it occurs only around where one's toes would be, it is not clear whether the overlap is more than "at the toe." Information before us is that the trade meaning of "toe" includes items which go much farther back in the shoe, as in a "steel toe" in safety work footwear, and items which end before the toes even begin, as in the "toe" inserted in the quick release mechanism of a ski binding. We have found only one use of the phrase "at the toe" in our trade reference. That is on page 247 of the "Manual of Shoemaking." The photo on page 249 makes it clear that, in that context, "at the toe" means only a vertical line about 1/100 inch wide at the front tip of the shoe. It is improbable that

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

F8

076581

076581

such an extremely restrictive definition would have been intended by Congress, but such a use of the phrase by the trade indicates that it is unlikely that the trade would also apply the phrase "at the toe" to a sidewall which is 5 inches long and also indicates that the phrase "at the toe" has no one trade meaning. A review of dictionaries also indicates that there is not one clear common meaning for "at the toe."

The Summary of Trade and Tariff Information, Rubber Footwear, USITC Publication 841, March 1981, at page 6, states in pertinent part that "items 700.61-700.63 provide for footwear that is held to the foot with the use of laces, buckles, or other fasteners and that is of cement construction, and is primarily intended to cover joggers."

In view of the expressed legislative intent that items 700.61-700.63, TSUS, cover primarily joggers, it is our position that "at the toe" means that small part of the front of the shoe which can be covered by the curl up of a flat outsole. We have never seen the overlap on a similar child's sole cover more than 2 1/2 inches of the shoe's perimeter. For this reason 2 1/2 inches will be the maximum encirclement permitted for an overlap to be only "at the toe."

HOLDING:

The child's "Zoo" shoe is dutiable at the rate of 90 cents per pair plus 37.5 percent ad valorem under item 700.67, TSUS.

You should inform the inquirer of this ruling.

TO : District Director of Customs
Terminal Island, San Pedro 90731

FROM : Director, Classification and Value Division

SUBJECT: Internal Advice Request No. 46/85 Concerning the Tariff Classification of Puffy 'N' Smell Stickers Manufactured in Taiwan

FACTS:

The merchandise involved consists of three dimensional stickers depicting various articles such as pineapples, cakes and small children, printed on a plastic film that is heat sealed over an inner layer of foamed polyurethane. An adhesive layer is applied to the back of the stickers and they are pre-cut, allowing each sticker to be peeled from a release paper and pressure applied to the desired surface. The foamed inner layer of the sticker contains a fragrance which is released when the Puffy 'N' Smell Sticker is scratched.

It is your opinion that the merchandise is classifiable under the provision for other articles, not specially provided for, of rubber or plastics, in item 774.55, Tariff Schedules of the United States (TSUS).

The inquirer maintains that the Puffy 'N' Smell Stickers are properly classifiable under the provision for expanded, foamed or sponge rubber or plastics, and articles not specially provided for wholly or almost wholly of such rubber or plastics: * * * flexible: of polyurethane in item 770.40, TSUS.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

F10

ISSUE:

Are the three dimensional stickers "almost wholly of" the foamed inner layer of polyurethane plastics?

LAW AND ANALYSIS:

General Headnote 9(f)(iii), TSUS, provides that "the term 'of,' 'wholly of,' 'almost wholly of,' 'in part of, and 'containing,' when used between the description of an article, and a material * * * have the following meanings:

> (iii) 'almost wholly of' means that the essential character of the article is imparted by the named material, notwithstanding the fact that significant quantities of some other material or materials may be present; * * *."

The inquirer in support of its position cites three tests for determining the essential characteristic of an article. These tests are as follows:

> (1) The essential characteristic of an article is that characteristic which distinguishes it from other articles of the same class. In the instant case it is the puffiness and smell which distinguish these stickers from any other stickers. See HRL 064528.
>
> (2) The essential characteristic of an article is that characteristic which makes the consumer want to buy the article. See A. N. Deringer, Inc. v. United States, 66 Cust. Ct. 378, C.D. 4218 (1971). In this case it is the scented layer of expanded plastic which makes the consumer want to buy the stickers.
>
> (3) The name of an article may denote its essential characteristic. See HRL 068197. In this case the designation of the product as Puffy "N" Smell stickers denotes its essential characteristic.

RELEASED TO THE

076582

F10

In HRL 064528 this office ruled that a women's or girl's brassiere having lace fabric was "almost wholly of lace" because the lace on the brassiere distinguishes it from other brassieres and, therefore, imparts its essential character. It was further explained in this ruling that this rationale as developed in Deringer, supra, would be followed in determining the essential character of wearing apparel in the absence of further elucidation by the court. In view of this holding we would not extend the rationale of Deringer to merchandise other than wearing apparel.

The tests cited by the inquirer for determining the essential character of an article are not relevant here for the following reasons:

(1) The puffiness and smell features of the stickers do not constitute one characteristic as claimed by the inquirer. Instead they constitute two separate and distinct characteristics.

(2) General Headnote 9(f)(iii), TSUS, requires that the essential character be imparted by the named material. The named material here is foamed plastic. The claim that the odoriferous feature of the stickers makes them almost wholly of foamed plastics is untenable. The odor is not imparted by the foamed plastics but rather by the odoriferous substance added to the foamed plastics.

(3) The puffiness attributable to the foamed plastics portion of the stickers does not constitute the essential character of the stickers. The essential character or essence of an article is that by which an article is what it fundamentally is. In this instance the pressure sensitive plastic gives the stickers their essential character. The foamed plastics makes for novel stickers but does not change the essential character of the stickers as plastic stickers designed to adhere to flat surfaces.

HOLDING:

The three dimensional stickers do not derive their essential character from the foamed plastics and consequently, are not "almost wholly" of the foamed inner layer of polyurethane plastics.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

F11

076582

The three dimensional stickers are classifiable under the provision for other articles, not specially provided for, of rubber or plastics in item 774.55, TSUS.

Chicago, Illinois 60607

FROM : Director, Classification and Value Division

SUBJECT: Cabinet Assembly, Drive Unit, Lift Assembly for the Conco-Tellus Tele-Carrier II Automatic Guided Vehicle (AGV) System; Internal Advice 53/85

FACTS:

Three imported subassemblies from Sweden, after importation, will be incorporated into a frame of United States origin to complete an automatically guided work vehicle, optionally equipped with lifting forks, flat work platform, and roller or chain conveyors. It is designed to pick up, transport, and stack palletized loads, containers and bins. The AGV rests on front swivel and rear stationary casters. It is 109.6 inches long, 41.8 inches wide, 82.7 inches high, and has a 4,000 pound maximum lifting capacity, to a height of 55 inches. Dimensions vary according to load capacity. It travels at the rate of 200 feet per minute forward and 100 feet per minute reverse. The AGV has bi-directional steering, allowing it to turn 180 degrees, and is equipped with two 48 volt batteries as a power source.

Optional system controls may involve a simple loop with no computer, a minicomputer or microcomputer, with or without administrative computer hookup. It may be preprogrammed to operate over a fixed path within a factory or warehouse adjacent to work stations or sites where pallets or loads are to be picked up and transported. Sensors in the AGV's cabinet

F13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

assembly receive a low electrical current in the guide wire set in the floor of the building to keep the vehicle on the guide path. The AGV may also be controlled manually by a hand-held module attached to the vehicle, directed by an operator walking alongside, and can be programmed to operate off the wire as well.

Exploded drawings and technical descriptive literature accompany a brief from counsel representing the internal advice applicant. The cabinet assembly, is described as containing nearly all of the electrical components of the vehicle. These include main and auxiliary microprocessor boards, two 48 volt batteries to supply power, digital keypad and numerical display readout, and cable tree (these permit the programming of the AGV's operations). In addition, the cabinet assembly contains the hand set manual controller and is specially designed to house both the drive unit and portions of the lift assembly. In essence, the cabinet assembly is said to perform two functions: it provides power, via the two batteries, for the various driving, steering and lifting motors on the AGV, and permits the programming and controlling of all its lifting and transporting functions.

The drive unit is described as comprising a drive motor to move the AGV in forward and reverse directions, a steering motor to move the vehicle left and right, and an assemblage of gears which connect the two motors. All are attached to a mounting bracket which, in turn, is mounted to the frame of the vehicle.

The lift assembly comprises two separate components, a lift motor with gears on a common frame, and a vertically positioned lift screw, both components being part of the AGV's lifting mechanism.

RELEASED TO THE

E19

Counsel maintains that classification of these three subassemblies depends upon the classification of the AGV itself if it were to be imported as a complete, functioning unit. Under this premise, classification of the unit is claimed to be under the provision for fork-lift trucks, and other self-propelled work trucks of off-the-highway types used in factories, warehouses, or transportation terminals for short-distance transport, and parts of the foregoing trucks, in item 692.40, Tariff Schedules of the United States (TSUS). Under the principles of General Interpretative Rule 10(ij), TSUS, and 10(e)(i), TSUS, it is claimed, the three subassemblies under consideration would be classifiable as "parts" under item 692.40, TSUS.

Your office, on the other hand, maintains that the cabinet assembly is specially provided for as a control panel, classifiable in item 685.90, TSUS, and the drive unit under the tariff provision in item 680.49 or 680.59, TSUS, as a speed changer. You maintain, as well, that while the lift assembly may in general be regarded as part of a fork-lift truck, it is more narrowly and specifically provided for in item 664.10, TSUS, as part of lifting machinery.

ISSUE:

Are any or all of the subassemblies specially provided for, or do they constitute "more than" articles classifiable within these special provisions, so as to justify classification as "parts" in item 692.40?

LAW AND ANALYSIS:

There is some suggestion in the file that the AGV, if imported as a unit, would be more properly classifiable in item 664.10, TSUS, as other lifting, handling, loading, or unloading machinery, rather than in item 692.40, and that the various subassemblies are classifiable as parts accordingly. We believe the latter provision would control classification of the AGV, for the reasons which follow.

G1

THIS DOCUMENT MAY BE RELEASED TO THE

076588

076588

Schedule 6, Part 4, Headnote 1(v), TSUS, would preclude the applicability of item 664.10 if the provision in item 692.40 can be shown to be more specific. In this regard, item 664.10 describes a species of "machinery" while item 692.40 describes a variety of "trucks" and "tractors" as well as the specific work environments in which they find utility.

Heading 87.07, Customs Cooperation Council Nomenclature (CCCN), the language of which substantially parallels that in item 692.40, and relevant explanatory notes thereunder, describe a group of mechanically propelled vehicles, among them pedestrian-controlled trucks, by their particular design features. Such features include special construction so as to make them unsuitable for transport by road or other public ways, very low operating speed, generally not to exceed 30 to 35 km/h, with a turning radius approximately equal to the length of the vehicle itself. The subject AGV appears to fall within this heading. Relevant explanatory notes under Heading 84.22, the language of which substantially parallels that in item 664.10, encompass stacking "machines" which raise and lower sacks or crates, but note that stack "trucks" of the warehouse truck type, including those steered by a walking operator, and work trucks for container handling, of the types used in factories, warehouses, dock areas or airports, are classifiable in Heading 87.07. We therefore conclude that the provision in item 692.40 more narrowly and specifically describes the AGV than does the provision in item 664.10. Note C.I.E. 1307/66, dated May 6, 1966, abstracted as T.D. 66-88(50).

In determining the classification of the cabinet subassembly, it is necessary to establish the common meaning of the term "control panel," in order to determine the applicability of item 685.90. See John V. Carr & Son, Inc. v. United States, C.D. 4411, rev'd C.A.D. 1116 (1974), in which the

DOCUMENT MAY BE RELEASED TO THE PUBLIC

G2

076588

imported merchandise consisted, among other things, of a "control board" used as parts of a pulse modulation system for operating fork lift trucks. The function of the control board was to provide electrical pulses to contol the opening and closing of a solid state switch device which regulates the flow of energy to the truck's motor. Without defining "control panel" specifically, the court held that the control board was "within the common meaning of at least certain of the articles in 685.90, including particularly 'other electrical apparatus for making or breaking electrical circuits, for the protection of electrical circuits, or for making connections to or in electrical circuits; *** control panels; *** and parts thereof.'" 61 CCPA at 45, 495 F.2d at 774. Accordingly, it was classified under item number 685.90.

Our response to I.A. 6/84, dated March 20, 1985 (071823), followed the Carr rationale in holding microprocesor-based programmable controllers used to control machine tools, material handling apparatus, etc., to be classifiable in item 685.90. Our Protest Review Decision dated July 19, 1985 (074827), held robot control cabinets incorporating a control panel with readouts, programming unit, floppy disc data storage unit, printed circuit boards and microprocessors, all housed in a common cabinet, to be classifiable as control panels, in item 685.90, TSUS. These decisions represent our current position and stand in contradistinction to our decision 070624 which limited the term "control panel" to articles which not only control but which also are "panels." We nevertheless view the Carr rationale to be persuasive particularly since tariff acts are made for the future as well as the present. The cabinet assembly, by its primary function and

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

076548

design, performs the basic function of controlling the AGV by making or breaking electrical circuits. It is therefore classifiable in item 685.90, TSUS.

As to classification of the drive unit, we conclude that the presence of the drive motor and steering motor, in addition to the gears which increase and reduce the speed and change direction of the AGV, makes this unit compellingly similar to the electric geared motor the subject of Servo-Tek Products Co. v. United States, C.D. 3581, aff'd. C.A.D. 969, 416 F.2d 1398 (1969). In that case, an electric motor plus gear train speed reducer was held to be more than a motor for tariff purposes because it was a unitary piece of composite machinery. Again, in the absence of a specific tariff provision to cover this particular article, the drive unit is appropriately classifiable under the parts proviso in item 692.40, assuming, of course, that it is chiefly used with the AGV. There is no evidence in the file to suggest otherwise.

Finally, the lift assembly consists of two separate articles: the lift motor and gears, mounted on a common frame, plus the lift screw which appears to connect to the lifting forks or conveyors. They both form an integral part of the AGV's lifting mechanism. Merchandise is classifiable under that tariff provision which most narrowly and specifically describes it. As such, we find that the lift motor and gears are classiifable in item 692.40, under the principles of Servo-Tek, supra. Moreover, where a particular part of an article is provided for specially, a part of that part is classifiable as such rather than as a part of the whole. Therefore, we find that the lift screw is classifiable under the provision for other parts of lifting machinery in item 664.10, TSUS. Note Korody-Colyer Corp. v. United States, 66, Cust. Ct. 337, C.D. 4212 (1971), and cases cited, and our Protest Review Decision dated November 8, 1983 (070846), copy attached.

G4

THIS DOCUMENT MAY BE RELEASED TO THE

HOLDING:

The cabinet assembly, drive unit, and components of the lift assembly are classifiable, respectively, as indicated.

DATE: OCT 22 1985

FILE: CLA-2 CO:R:CV:G
076633 JCH

076633

TO : Chief, Value and Special Classification Branch

FROM : Chief, General Classification Branch

SUBJECT: Protest No. 3801-5-001221

Since the subject protest involves a valuation issue, it is being forwarded to you for the preparation of a PRD. With respect to the classification aspect of the protest, we are furnishing you for incorporation into the respective Issue, Facts, Law and Analysis and Holding paragraphs of your PRD the following suggested paragraphs.

ISSUE:

Duty was liquidated at the 1984 column 1 rate of 9.5 percent ad valorem for machine tool accessories in item 674.56, Tariff Schedules of the United States (TSUS). It is claimed the merchandise is properly dutiable at the 1984 column 1 rate of 4.2 percent ad valorem for parts of machines, not specially provided for (n.s.p.f.), in item 678.50, TSUS.

FACTS:

In the protest the merchandise is described as axis and wrist assemblies which are for industrial robots and which act as gear reducers converting hydraulic power to mechanical motion. Material submitted with the protest shows the axis assembly controls the basic swivel or waist motion of the robot on one axis. The wrist assembly is shown to augment the waist, horizontal and elbow motions with further motions on three additional axes. The descriptions of the robots in which the merchandise in question is used as parts further show that the robots are of a multipurpose type

G6

THIS DOCUMENT MAY BE RELEASED TO THE

which before programming for their present welding functions could also be programmed to operate power tools, caulking guns, oxyacetylene torches, grinders, drills, etc.

LAW AND ANALYSIS:

The liquidated classification for the merchandise as machine tool accessories is not consistent with any of our previous positions specifically dealing with robots or other machine tool controllers. Our usual classification approach has been to regard multipurpose robots as machines, n.s.p.f.

HOLDING:

For the foregoing reasons, we regard the instant axis and wrist assemblies as classifiable under the provision for parts of machines, n.s.p.f., in item 678.50, TSUS. Therefore, (assuming the valuation claim is denied) you are instructed to deny the protest except to the extent reclassification of the merchandise as indicated above results in a partial allowance. A copy of this decision should be attached to the Form 19 Notice of Action.

Area Director of Customs
New York Seaport
6 World Trade Center
New York, New York 10048

Dear Sir:

Re: Application for Further Review of Protest No. 1001-4-018289

This is a protest against your classification of the Peter Rabbit Birthday Book, illustrations by Beatrix Potter, as blank books under item 256.58, Tariff Schedules of the United States (TSUS).

FACTS:

The so-called birthday book is extensively printed with text and pictures and consists of cut pages sewn or bound as any other book. It also contains certain lined spaces on alternative sheets for birthday listings to be filled in by the user. Blank spaces for three dates exist on each sheet. For instance, the book begins with spaces for January 1, January 2 and January 3. Opposite these blank spaces are sheets that contain illustrations printed back to back. Next to each illustration three poems appear, each bearing a date corresponding to the date left blank for birthday information. The net effect is that when you open the birthday book, a poem, an illustration and a blank space appear for each date.

The jacket for the Peter Rabbit Birthday Book states:

> The Peter Rabbit Birthday Book uses Beatrix Potter's charming illustrations of Peter Rabbit and his adventures, well loved and remembered in their own right, to bring a delightful book alive for children — or adults. There is a poem for every day of the year, with space for recording the birthdays of family and friends. A quick glance at the birthday book guarantees that you will never embarrass yourself again by remembering a friend's birthday two weeks late and will give

68

The birthday book contains a title page and the back of the title page contains a copyright notice and a Library of Congress catalogue number.

The foreword to the book provides:

> Peter Rabbit Birthday Book uses Beatrix Potter's illustrations to add excitement and charm to an old custom, that of keeping a birthday book, and provides a different saying for every day of the year. While keeping a birthday book is an old-fashioned tradition, it is a tradition that fits in well with our modern life. It teaches children to be thoughtful of others by remembering the birthdays of family and friends, not just their own. It helps busy adults to keep track of the many birthdays they wish to remember.
>
> With Beatrix Potter's delightful illustrations of Peter Rabbit and his friends, the Peter Rabbit Birthday Book will make recording and remembering birthdays a pleasure.

ISSUE:

Whether the language set forth in Schedule 2, part 5, headnote 1, TSUS, stating "this part covers only printed matter consisting essentially of textual or pictorial matter" precludes classification of this item under item 270.25, TSUS.

DISCUSSION OF LAW:

Item 270.25, TSUS, provides for the duty-free entry of books not specially provided for. Item 256.58, TSUS, covers the classification for other blank books bound with a 1984 rate of 1 1/2 percent.

In Webster's New World Dictionary, Second College Edition (World Publishing Company 1972), the first definition of "essential," the key word in the question presented, is "of or constituting the intrinsic fundamental nature of something; basic; inherent." Intrinsic is defined in the same dictionary as meaning, "belonging to the real nature of a thing; not dependent on external circumstances; essential; inherent."

076663

G9

In reviewing the Peter Rabbit Birthday Book, it is our opinion that the intrinsic, fundamental nature of this imported article stems from the space provided for recording and remembering birthdays. The poems and illustrations are present to aid in the marketing of the imported product. As stated in the foreword the Peter Rabbit Birthday book uses the illustrations to add excitement and charm to an old custom, that of keeping a birthday book. Thus the essential nature, the reason for the book, is keeping birthday records. The illustrations and poems are only additions or adjuncts to this feature.

HOLDING:

The Peter Rabbit Birthday Book is classified under item 256.58, TSUS. Accordingly, you are directed to deny the protest. A copy of this decision should be attached to the Form 19 Notice of Action and provided to the protestant.

Sincerely,

William P. Schaffler

for Harvey B. Fox
Director, Classification
and Value Division

Mr. Marvin J. Ungar
Hyde Athletic Industries Inc.
Centennial Industrial Park
Centennial Drive
P. O. Box 6046
Peabody, Maine 01961

Dear Mr. Ungar:

Your letter dated June 4, 1985, addressed to our New York office concerning the dutiable status of a footwear component which will be produced in Korea or Taiwan, has been referred to us for a direct reply to you.

The sample submitted is a fabric "upper" with a leather outside back counter, toe bumper, and eyelet stay. This sample is to be used to make the style "Jazz" jogging shoes which are of a slip lasted construction. Jogging shoes of slip lasted construction are made by first stitching together the "upper." In the rear one third of the "upper" the two edges of the upper are simply stitched together. In the front two thirds of the "upper" there is a large flap of material about 3 inches wide and 5 inches long which hangs down from the right side of the "upper." The edge of this strip is then sewn to the edge of the balance of the "upper." The stitching of the edges of the upper in the rear one third of this article has been completed but not the sewing of the flap.

The issue presented is whether the sample "upper" is lasted within the purview of T.D. 79-100 or whether it is an unlasted "upper."

T.D. 79-100 was concerned with leather footwear uppers which had been lasted, i.e., have an insole or midsole and have been formed to fit the foot. That ruling did not purport to set forth an all inclusive definition of the term "lasted." In reaching a decision in that matter, Customs drew the following conclusions:

(1) The lasted leather footwear uppers have undergone substantial processing to the extent that they have been advanced beyond the stage of being forms or shapes suitable for conversion into footwear and constitute unfinished footwear.

(2) The absence of a sole or heel does not preclude classification of lasted leather footwear uppers as leather footwear. An unfinished article may be classified as the finished article when completed to the stage at which the fundamental characteristic of the finished article is apparent.

G12

(3) With respect to lasted leather footwear uppers, the essence or fundamental characteristic of the shoe is readily apparent. A lasted leather footwear upper resembles a shoe and provides a layer or two of protection between the foot and flooring.

The sample does not have the basic shape of footwear. In HRL 073078 c, dated September 22, 1983, this office ruled that sewing which closed a small slit in the bottom of an imported upper was insufficient to bring about a substantial transformation. We consider the present situation distinguishable because sewing the bottom flap closed causes the sample to attain the shape of footwear, whereas in the prior ruling, no change in appearance, shape or resemblance to finished footwear occured as a result of the sewing operation.

It is our observation that the sample is not lasted. We note that in the case of Uniroyal, Inc. v. United States, 3 CIT 220, Slip Op. 82-45 (1982), the court held that the sewing of the parts of a moccasin together was a major part of the lasting process. However, with respect to the subject article there is stitching which remains to be done. Additionally, since this is a nylon/leather upper, not an all leather upper as in most previous cases, the process of giving the shoe its final shape requires steps which are not necessary in leather moccasins. Specifically, the article will have a flat plastic back counter inserted, and then, with the article securely attached to a last, the plastic already present in the toe and in the back counter will be forced under heat and pressure into the heel and toe shapes. When the plastics cool, the article will then basically have its final shape. The attachment of the jogger bottom will not significantly affect its shape at that point.

In view of the foregoing we do not believe the sample is sufficiently advanced to be considered unfinished footwear. Consequently, it is classifiable under the provision for other articles not specially provided for, of leather in item 791.90, TSUS, and dutiable at the rate of 1 percent ad valorem or entitled to duty-free treatment under the Generalized System of Preferences, if otherwise qualified.

Sincerely,

Arthur P. Schaffner

Mr. Thomas M. Binger
Customs Manager
Graphics International Trading Co.
2501 McGee
P.O. Box 1566
Kansas City, Missouri 64141

Dear Mr. McGee:

Your letter dated May 6, 1985, requesting a ruling concerning the tariff classification of a textile jewelry pouch from Taiwan has been forwarded to us by our New York office for direct reply to you. A sample was provided along with your request.

The sample is a small drawstring pouch of brushed synthetic textile materials designed to contain jewelry. It measures approximately 3-1/2 inches by 2 inches.

You contend that this jewelry pouch is similar in size to a jogger's wallet which has been considered too small to be a flat good and has been classified in item 386.13, Tariff Schedules of the United States (TSUS), if ornamented, or in item 389.62, TSUS, if not ornamented.

Schedule 7, Part 1, Subpart D, Headnote 2(c) explains that the term "flat goods" covers "small flatwares designed to be carried with the person," and lists a number of exemplars that are commonly carried in this manner. The exemplars include:

> Banknote cases, bill cases, billfolds, bill purses, bill rolls, card cases, change purses, coin holders, compacts, currency cases, key cases, letter cases, license cases, powder cases, spectacle cases, stamp cases, vanity cases, tobacco pouches, and similar articles.

It is our view that the instant merchandise is not an article similar to the exemplars listed in Headnote 2(c). Rather, it appears that this merchandise is similar to the small drawstring pouch marketed with a watch which was the subject of Headquarters Ruling Letter dated February 10, 1983, file No. 070760. In that ruling, Customs rejected classification under a luggage provision in item 706.36, TSUS, and classified such merchandise under the provision for articles not specially provided for of textile materials: other articles, not ornamented: of cotton: other,

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

A3

in item 386.50, TSUS. Accordingly, this jewelry bag is classifiable under the provision for articles not specially provided for, of textile materials: other articles, not ornamented: of man-made fibers: in item 389.6270, TSUS, dutiable at the rate of 8 cents per pound plus 11 percent ad valorem. There are no textile quota restraints on articles classified in this provision.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

076744

Jeffrey P. Altman, Esq.
McKenna, Conner & Cuneo
1575 Eye Street, N.W.
Washington, D.C. 20005

Dear Mr. Altman:

This is in reference to your request of June 24, 1985, concerning the tariff classification of a household insecticide produced in Japan or Brazil.

The active ingredient, permethrin, a benzenoid insecticide is pelletized with azodicarbonamide, a scent, and potato starch. The pellets are placed in a cup at the top of a metal container in which container there is also calcium oxide and a paper pad, and packaged in a plastic unit. In use, water is added to the plastic unit and reacts with the calcium oxide to produce heat. The heat reacts with the pellets, releasing nitrogen gas, which blows the permethrin into the atmosphere.

The questions presented are: (1) whether the finished product is classifiable as an entirety in item 408.36; (2) whether, if the pellets containing the active ingredient were of U.S. origin, an allowance for the U.S. content is possible; (3) if the permethrin pellets are made in Brazil and sent to Japan for incorporation into the finished product, whether an allowance would be made for the value of the permethrin pellets under the GSP; and (4) whether, if an allowance under GSP would be made if pellets were shipped from Brazil to the United States and then to Japan, presumably for return to the U.S.

In view of the nature of the finished product from Japan, it would be classifiable as an entirety in item 408.36, TSUS. The rate of duty is 1 cent per pound plus 9.7 percent ad valorem.

If permethrin pellets of U.S. origin were sent to Japan and added to the container, the American Goods Returned provision, item 800.00, TSUS, would not apply, since the total finished product is more than packaging for the insecticide pellets and is considered to advance the value of the American product contrary to the specific limitations of item 800.00, TSUS.

In the case of the Brazilian-made permethrin pellets shipped directly or indirectly to Japan, the product would not qualify for GSP treatment because an eligible article must be imported directly from the beneficiary country. Importations from Japan are not eligible for GSP tariff

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

AS

treatment. Of course, if the pellets are made in and shipped from Brazil to the United States, there would be no duty on the first shipment if there is compliance with the regulations inasmuch as item 408.36, TSUS, is a GSP eligible item.

Sincerely,

Arthur P. Schifflin

New York, New York 10048

Dear Ms. DeGaetano:

A Customs Form 6431 dated May 15, 1985, received in this office on August 13, 1985, from the port of Pembina, North Dakota, concerns entry No. 85-326094-5 dated November 2, 1984, covering a shipment of acoustic panels and components manufactured by Artmet Products of Edmonton, Alberta, Canada. This difference of opinion is not listed in the list of differences published as CIE N-89/79, Suppl. No. 42 of June 1985.

The merchandise involved is described on the CF 6431 as acoustical panels and components. Divider panels or screens are included among the components.

In Headquarters Ruling letter (HRL) 060688 NL dated July 30, 1979, this office ruled that a work station consisting of acoustical divider panels, work surfaces, and wood cabinets which are imported in a dismantled condition but in complete units is classifiable under the provision for furniture, and parts thereof, not specially provided for, of wood, other than chairs in item 727.35, Tariff Schedules of the United States (TSUS). Our attention has been called to the fact that the above-cited ruling is in conflict with HRL 051940 JV dated June 14, 1977, and HRL 065376 VLC dated October 6, 1980. In HRL 051940 JV the merchandise involved consisted of desks, tables, cabinets, wall storage units and screens stated to be in chief value of wood. The conclusion reached in this ruling was that screens, whether imported separately or in combination with one or more of the named articles, are classifiable under the provision for other wood screens in item 206.67, TSUS. In HRL 065376 VLC dated October 6, 1980, the merchandise involved consisted of panels or screens in chief value of plastic or steel. The panels or screens were designed to be incorporated with shelving units, cabinets and desktops to create "work modules." This office ruled that pursuant to Schedule 7, Part 4, Subpart A, Headnote 1(v), the screens regardless of their composition were excluded from classification as furniture and are properly classifiable according to component material of chief value.

It is our opinion that the two latter cited rulings are the correct expression of the law on this matter. Consequently, the screens involved are separately classifiable under item 206.67, TSUS, if in chief value of iron or steel. That portion of HRL 060688 NL dated July 30, 1979, which is inconsistent with this ruling is revoked.

A7

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

076745

A question has also arisen whether furniture such as a desk in need of a screen or divider for support would be considered furniture for tariff purposes.

The sending officer maintains that furniture, even if not free standing and in need of a screen for support, would still be furniture for tariff purposes. He points out examples such as gunracks, kitchen cabinets, and shelves, which need a wall for support are considered furniture.

In HRL 041619 dated November 24, 1975, it was stated that "a shelf or desk that could not stand alone and have utility by itself would be classifiable as a part of furniture." Also, in HRL 043860 c dated April 29, 1976, this office held that 36 inch unfinished desk units which were not free standing units in themselves and were not used independently of the free standing units (bookcase units) were classifiable as parts of furniture.

Schedule 7, Part 4, Subpart A, Headnote 1, TSUS, provides in pertinent part that "For the purposes of this subpart, the term "furniture" includes * * movable articles of utility, designed to be placed on the floor or ground * * *."

It is our interpretation of the cited headnote that a desk which is in need of a screen for support does not meet the definition of furniture because it is not "designed to be placed on the floor." For this reason and the previous precedent on this matter set out in HRL 041619 NM and HRL 043860 c, we are of the opinion that a desk in need of a screen or divider for support is properly classifiable under the provision for parts of furniture in item 727.40, TSUS.

Sincerely,

Arthur P. Schaffner

Embassy of Belgium
3330 Garfield Street, N.W.
Washington, D.C. 20008

Dear Dr. Ronchaine:

This is in reply to your letter dated August 5, 1985, requesting a tariff classification ruling on Cecemel manufactured by Nutricia in the Netherlands and shipped to the United States.

Cecemel is a chocolate flavored sterilized dairy drink. The ingredients of this chocolate milk drink are semi-skimmed milk, sugar, and cocoa. This product is treated at ultra-high temperature and it is shelf-stable. Cecemel will be shipped in ready-to-serve cans that hold 8.8 fluid ounces. The directions on the can state shake well before use.

It is our opinion that Cecemel meets all the requirements of a chocolate milk drink and would be classified under item 118.15, Tariff Schedules of the United States (TSUS). Currently, articles imported under item 118.15, TSUS, are not subject to quota.

Insofar as information regarding the Department of Agriculture and the Food and Drug Administration requirements are concerned, we suggest you contact the following offices.

William J. Maloney, Esq.
Rode & Qualey
Attorneys at Law
295 Madison Avenue
New York, New York 10017

Dear Mr. Maloney:

This is in reply to your letter dated May 6, 1985, requesting a ruling on behalf of your client, Technical Oil Products, Inc., Carlstadt, New Jersey, as to the correct tariff classification of dextrose and fructose (levulose) to be manufactured in a foreign trade zone and entered into the Customs territory of the United States.

It is the intention of Technical Oil to produce 95-99 percent pure fructose (also known as levulose) and dextrose from imported cane or beet sugar in a Foreign Trade Zone. The initial material will be in one of three possible forms: raw crystalline sugar, refined crystalline sugar, or an invert sugar syrup. The raw or refined sugar will be combined with water in order to produce syrups. These syrups will then undergo a process known as inversion by subjecting them to heat in the presence of an acid. This part of the processing will be unnecessary when an invert syrup is utilized as a starting material.

The process of inversion causes the complex cane or beet sugar syrup molecule known as sucrose ($C_{12}H_{22}O_{11} + H_2O$) to break down into the simpler constituent sugars of dextrose ($C_6H_{12}O_6$) and fructose ($C_6H_{12}O_6$). While the empirical formula for these two sugars is identical, there are substantial differences in the way each sugar is chemically bonded resulting in the physical differences between these two sugars. When the process of inversion of sucrose is taken to the maximum extent possible the resulting invert syrup will be composed of 50 percent dextrose and 50 percent fructose by weight of dissolved solids.

Upon attaining total inversion of the liquid cane or beet sucrose into a syrup equally composed of dextrose and fructose, Technical Oil will proceed to separate these two sugars. The method employed will be either ion exchange or membrane separation. In any case, the substances ultimately produced and entered from the foreign trade zone will be two separate products, dextrose and fructose in liquid form.

It is obvious that both of the produced substances retain commercial and chemical identities as sugars. It is also apparent that their origin can be traced back to a cane or beet sugar source. This would suggest

NO

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC ____

consideration for classification under items 155.20, TSUS, and 155.30, TSUS, as a sugar or syrup derived from sugar beets. However, there are also eo nomine provisions for both of these sugars in the tariff schedules. Dextrose is provided for in item 155.60, TSUS, with duty at 1.6 cents per pound, while fructose is provided for as levulose in item 493.66, TSUS, with duty at 16.3 percent ad valorem. You have argued the latter alternatives relying heavily upon Ruling 059867 of October 20, 1978.

Ruling 059867 dealt with the applicability of import fees under item 956.05, 956.15, and 957.15, TSUS, normally assessed on sugars derived from cane or beet sugar, to those sugars classifiable as dextrose under item 155.60, TSUS, and levulose (fructose) under item 493.66, TSUS. While this ruling quite correctly holds that these fees are not applicable to products classifiable under item 155.60 and 493.66, TSUS, it does not clearly settle the issue regarding tariff classification of fructose and dextrose when produced from a cane or beet sugar. This issue was specifically dealt with in the decision upon Application for Further Review of Protest 10014019404, issued on October 21, 1975. That decision held that a fructose produced in essentially the same manner as contemplated by Technical Oil was more properly classifiable under the eo nomine provision for levulose in item 493.66, TSUS, rather than as a sugar derived from cane or beet sugar provided for in Schedule 1 of the tariff schedules. While the decision did not deal directly with dextrose produced in the same manner, it would be logical to follow the same reasoning regarding the tariff classification of that product.

Accordingly, fructose produced by inversion of cane or beet sugar and separated by ion exchange or membrane separation would be classifiable under item 493.66, TSUS. Dextrose produced in the same manner would be classifiable in the named provision for that substance in item 155.60, TSUS. Of course, if the products should be determined to be less than 95-99 percent chemically pure then the product may not be covered by this ruling.

Unlike the provisions for cane or beet sugars, there are no quotas or restrictions upon the importation of products classifiable under these provisions.

We suggest you contact Mr. John Da Ponte, Executive Secretary, Foreign Trade Zones Board, U.S. Department of Commerce, Room 1519, Washington, D.C. 20230, in order to determine the permissibility of this proposed operation in a foreign trade zone.

Sincerely,

For Harvey B. Fox
Director, Classification
and Value Division

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 0401-5-000020

This protest was filed against your decision in the liquidation on December 14, 1984, of entry No. 343139 dated December 29, 1985, covering a shipment of footwear manufactured in Korea.

FACTS:

Certain kids jogging shoes, stock Nos. M55866 and M55863, were classified in liquidation under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS), with duty at the rate of 12.5 percent ad valorem.

The protestant maintains that the shoes involved are classifiable under the provision for other footwear of leather for men, youths and boys in item 700.35, TSUS, and dutiable of the rate of 8.5 percent ad valorem.

ISSUE:

Are the shoes in chief value of leather as claimed by the protestant?

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

A12

Law and Analysis:

The protestant maintains that the documentation provided at the time of entry shows that the footwear was in chief value of leather. He also states that the laboratory report prepared by Customs is incorrect as to the amount of leather present in the footwear and should not have been the basis for a rate advance.

Customs laboratory Report No. 2-84-52848 states that .02750 sq. ft. of leather is present in style No. M55866. The original laboratory report was checked and it was discovered that the amount of leather present in the footwear was .2750 sq. ft.

Even if we disregard the report on style No. M55866 due to error, the laboratory report on style No. M55683 states that .2810 sq. ft. of leather is present and according to the laboratory, that shoe is the same size, child's 13, as style No. M55866 and differs only in color.

There is nothing inherently unreasonable about .2815 sq. ft. of leather being present per shoe in a child's 13 even if 57.3 percent of the exterior surface area of its upper is

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

A13

076765

076765

leather. The .2815 sq. ft. per shoe (.563 sq. ft. per pair) found by the laboratory in style No. 55683 is tangible evidence that the .89 sq. ft. of leather claimed to be present in the youths 13 1/2 is a gross overstatement. Therefore, we will correct the claimed material cost of $1.136 by multiplying it by .632 (.563 divided by .89). This results in a correct leather material cost of $.718. Our recomputation to determine component material of chief value for the youth's shoe is as follows:

Leather	$.718	R&P	$.90
	+ .198		+ 25
	$.916		$ 1.15

Similarly, we correct the claimed material cost for the boys' shoe from $1.144 to $.723 by also multiplying it by .632 because we assume that there is a similar overstatement in the other sizes. Our recomputation to determine component material of chief value of the boys' shoe is as follows:

Leather	$.723	R&P	$.937
	+.216		+. 25
	.939		$ 1.187

Our recomputations show that the footwear is in chief value of rubber/plastics requiring their classification under item 700.95, TSUS, as liquidated.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

A14

076765

Holding:

The protest should be denied. A copy of this decision should be attached to your Form 19 Notice of action to be sent to the protestant.

Sincerely,

Arthur P. Schaffler

076766

District Director of Customs
Boston, Massachusetts 02109

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 0401-4-00398

This protest was filed against your decision in the liquidation on May 18, 1984, of entry No. 83-371661-3 dated August 19, 1983 and entry No. 84-414124-8 dated October 13, 1983.

FACTS:

The merchandise involved consists of men's cowhide split leather with nylon sport shoes manufactured in Taiwan.

This footwear was classified in liquidation under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS), with duty at the rate of 12.5 percent ad valorem.

The protestant maintains that the footwear is properly classifiable under the provision for other footwear of leather for men, youths and boys in item 700.35, TSUS, and dutiable at the rate of 8.5 percent ad valorem.

ISSUE:

Are the exterior surface areas of the footwear uppers involved over 50 percent leather?

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B2

LAW AND ANALYSIS:

Style No. WS-5302 has an all leather upper and is in chief value of leather. Accordingly, it is dutiable at the rate of 8.5 percent ad valorem under item 700.35, TSUS.

Style Nos. WS-5348 and WS-5459 have nylon uppers and leather overlays. These styles which are similar are claimed to have over 50 percent leather on the exterior surface area of their uppers. A Customs laboratory report establishes that a contemporaneous shipment of style No. WS-5348 from the same maker has only 48.4 percent of the exterior surface area of the uppers covered by leather. Our understanding is that the protestant does not dispute the finding of the Customs laboratory.

It should be noted that the liquidation of style Nos. WS-5348 and WS-5459 under item 700.95, TSUS, was in error. These styles which were over 50 percent by weight of fibers and rubber or plastics with at least 10 percent by weight being rubber or plastics should have been classified under item 700.62, TSUS, with duty at the rate of 90 cents per pair plus 20 percent ad valorem.

HOLDING:

The protest should be allowed as to style No. WS-5302.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B3

076766

The protest should be denied as to style Nos. WS-5348 and WS-5459.

A copy of this decision should be attached to the Form 19 Notice of Action to be sent to the protestant.

Sincerely,

B. 7+

TO : District Director of Customs
San Diego, California 92188

FROM : Director, Classification & Value Division

SUBJECT: Internal Advice Request No. 47/85 Concerning the Tariff Classification of Unicorn and Pegasus Figures Manufactured in Korea.

FACTS:

The merchandise involved consists of eight inch high figures of a Unicorn and Pegasus. These figures are made of a combination of man-made textile materials and wool. The legs of both creatures are made of wire covered with a layer of wool. These creatures have articulated bodies with ornamented manes and tails and snap-lock plastic eyes. They are further decorated with colorful ribbons and flowers.

Counsel for the inquirer maintains that the figures are not toy figures and are properly classifiable under the provision for articles, not specially provided for, of textile materials, ornamented, other in item 386.13, Tariff Schedules of the United States, (TSUS).

Alternatively, counsel claims that the merchandise is classifiable under item 737.47 or item 737.49, TSUS, as toy figures of inanimate objects.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

076769

It is your view that these figures are classifiable under the provision for other toy figures of inanimate objects, not having a spring mechanism in item 737.49, TSUS.

ISSUE:

Are these figures chiefly used for the amusement of children or adults?

LAW AND ANALYSIS:

Schedule 7, Part 5, Subpart E, Headnote 2, TSUS, provides that "For the purposes of the Tariff Schedules, a "toy" is any article chiefly used for the amusement of children or adults."

Schedule 7, Part 5, Subpart E, Headnote 1, TSUS, provides that "the articles described in the provisions of this subpart (except parts) shall be classified in such provisions, whether or not such articles are more specifically provided for elsewhere in the tariff schedules ****.

General Interpretative Rule 10 (e)(i), TSUS, provides that "a tariff classification controlled by use (other than actual use) is to be determined in accordance with the use in the United States at, or immediately prior to, the date of importation, of articles of that class or kind to which the imported articles belong, and the controlling use is the chief use, i.e., the use which exceeds all other uses (if any) combined,"

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B6

It is your position noting the case of The United States v. Topps Chewing Gum Inc. 58 CCPA 157, C.A.D 1022, that the purpose of these figures is to give the same kind of enjoyment as playthings give, and also to induce the emotion of frivolity.

We concede that the sample figures by their nature possess some amusement or entertainment value. However, not all articles which amuse are classifiable as toys. The law requires that in order to be classified as a toy an article must be chiefly used in a manner so as to create a "quality of mind or emotion" best described as "frivolous entertainment." The courts have consistently drawn a distinction between toys and articles whose chief use is not for amusement but for display purposes. See Fred Bonner Corp v. United States, 57 Cust. Ct. 428, C.D. 2832 (1966), and Louis Marx & Co., Inc. v. United States, 65 Cust. Ct. 672, C.D. 4156 (1970). In these cases, usage for display purposes was found to rebut the classification of the items as toys.

Following this judicial direction we must consider those factors which distinguish toys and figures chiefly used for ornamentation, display or decoration. Can a figure be described as being comical or whimsical in appearance? Does it have a predominantly humorous quality or character to it? Does it invite touch, manipulation and the play usually associated with toy playthings? On the other hand is the

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

076769

figure essentially passive or uncomical in appearance? Does it have sufficient detail to impart a reasonably realistic appearance usually associated with shelf items? Can it stand on a flat surface? Does it lack an ability to withstand or provoke extensive manipulation? What is its commercial designation?

The Court has differentiated between articles used for ornamental, decorative, or display purposes and articles whose purpose is to give the same kind of frivolous enjoyment or trivial levity as playthings give. The Court has stated that articles which are essentially passive, uncomical, nonmanipulatable and finely finished are not classifiable as toys. In making this determination, the court has cited as evidence the manner in which the articles are sold and its examination of the samples themselves. See American Customs Brokerage Co. v. United States, 60 Cust. Ct. 23, C.D. 3246 (1968); Wilson's Customs Clearance, Inc. v. United States, 59 Cust. Ct. 36, C.D. 3061 (1967); Sports Specialties Corp. v. United States, 65 Cust. Ct. 550, C.D. 4137 (1970).

Our analysis of the samples shows that they: (1) are far less conducive to manipulation than the usual and ordinary toy figure, (2) are essentially passive in appearance and lack humorous or comical qualities, (3) are designed to stand on

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

a flat surface; (4) are being marketed through other than the normal toy channels; (5) are essentially delicate shelf-like replicas of animals made partly of wire and pure wool; and (6) are potentially capable of causing injury if used in a play activity.

It is our opinion that the Unicorn and Pegasus figures which possess the characteristics enumerated above do not fall within the tariff definition for toys. These figures are of a class or kind of merchandise which have more display appeal than play value.

HOLDING:

The bodies of the sample figures, which are of different sizes, are made of tightly compressed wadding or batting of wool and man-made fibers. We consider these items to be articles of textile wadding or batting, either of wool or man-made fibers. The cost figures provided do not enable us to distinguish between the two. Classification of the sample figures would be under item 355.18, TSUS, at 10.3 percent ad valorem, if of wool, or under item 355.25, TSUS, at 4 cents per pound plus 13.3 percent ad valorem, if of man-made fibers.

The applicable textile quota category numbers are 469 (wool) or 699 (man-made fibers). As products of Korea these figures are subject to quota restraints.

Harvey B. Fox

District Director of Customs
Miami, Florida 33131

Re: Decision on Application for Further Review of Protest No. 5201-5-000044

Dear Sir:

This protest was filed against your decision in the liquidation on November 23, 1984, of entry No. 272065 dated September 20, 1984.

FACTS:

The merchandise involved in this protest consists of women's jackets manufactured from 100 percent cotton. The jackets were entered under the provision for other women's wearing apparel, not ornamented, of cotton, not knit, coats, other in item 383.34, Tariff Schedules of the United States (TSUS), but were classified by Customs as ornamented women's wearing apparel in item 383.06, TSUS, because of the presence of a tricolored decorative label that is approximately 1/2 inch x 1 7/16 inches. The label bears the printed word "FURY" in white letters outlined in blue that appear against a red background.

ISSUE:

Whether the subject label ornaments the garment.

LAW AND ANALYSIS:

Protestant claims in its supplemental submission dated August 6, 1985, that the label under consideration is composed of two colors. From its perspective, the red and blue colored yarns are woven on a white (colorless) background which remains visible. Thus, the protestant contends that the white colored yarns are not considered to be a color for purposes of the label. Then too, protestant argues that the effect imparted by the blue outline is "de minimis."

B/O

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

076774

As expressed by the Customs Service in numerous rulings, it has been the general rule that for labels visible during the normal wear of the garment, the identification of the manufacturer, in itself, is not a primarily utilitarian function. Therefore, such labels normally constitute ornamentation. An exception has been carved from this general rule for relatively small, rectangular shape, identifying labels containing only plain writing or block printing in an orderly arrangement. This exception has been narrowly construed. Customs has ruled repeatedly that anything done to a label which obviously is meant to enhance the appearance of the label and, consequently, the garment upon which it appears may cause the label to constitute ornamentation.

In our opinion, this protest is governed by previous Customs rulings on tricolored labels. In Headquarters Ruling Letter 069421 dated February 10, 1982, where we found that a dark blue label containing the words ROSE HIPS JEANS in block letters with the words ROSE and JEANS in white letters juxtaposed against the middle word HIPS in red lettering constituted ornamentation, we stated:

> the use of multiple colors on a single label is a factor that contributes to the decorative appearance of the label.

Again, in HRL 073007 dated October 13, 1983, we found that the use of multiple colors on a label embellished the label and, therefore, the garment on which it is located.

Based on the foregoing rulings, it follows that the tricolored nature of the instant label embellishes the label. The prominence of the word "FURY" arises from the use of the blue yarns to outline the white letters against a red background. We believe that the tricolored arrangement is eyecatching and intended to attract a viewer's attention. Thus, the label imparts more than an incidental, decorative effect.

B11

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

076794

HOLDING:

The merchandise was classified correctly in item 383.06, TSUS. You should deny the protest and send a copy of this letter with your Form 19 Notice of Action.

Re: Decision on Application for Further Review of Protest No. 5201-5-000146

Dear Sir:

This protest was filed against your decision in the liquidation on February 1, 1985, of entry no. 511203 dated October 23, 1984.

FACTS:

The merchandise subject to protest consists of 100 percent cotton woven jackets. The jackets were entered under the provision for other women's wearing apparel, not ornamented, of cotton, not knit, coats, in item 383.34, Tariff Schedules of the United States (TSUS), but were classified by Customs as ornamented wearing apparel in item 383.05, TSUS, because of the presence of a tricolored decorative label bearing the printed word "FURY".

ISSUE:

Whether this protest satisfies the criteria for further review in section 174.24, Customs Regulations.

LAW AND ANALYSIS:

The threshold question raised here is a procedural one and concerns whether the protest is properly before Customs Headquarters.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

B13

Customs Form 19 used for filing the protest indicates that the protestant has not made a request for further review of the same claim with respect to the same or substantially similar merchandise. We note, however, that the issue presented by the Application for Further Review of Protest No. 5201-5-000044 is the ornamenting effect of an identical label on a similar jacket concerning the same importer. We find, therefore, this application for further review to be procedurally deficient.

HOLDING:

Further review of protest no. 5201-5-000146 should be denied because the criteria for further review in section 174.24, Customs Regulations, have not been satisfied. Action on this protest should be taken in accordance with the enclosed decision on the Application for Further Review of Protest No. 5201-5-000044.

Sincerely,

For Harvey B. Fox
Director, Classification
and Value Division

Philadelphia, Pennsylvania 19106

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1101-5-000089

This protest was filed against your decision in the liquidation on March 1, 1985, of Entry No. 136541 dated February 26, 1979, covering a shipment of women's nylon track shoes manufactured in Korea.

FACTS:

The women's nylon track shoes, patt Nos. CNQ7515 and CNQ8149-2W, were classified in liquidation under the provision for other footwear which is over 50 percent by weight of fibers and rubber or plastics with at least 10 percent by weight being rubber or plastics and having uppers of which not over 90 percent of the exterior surface area is rubber or plastics in item 700.60, Tariff Schedules of the United States (TSUS), and dutiable at the rate of 20 percent ad valorem.

Pursuant to Schedule 7, Part 1, Subpart A, Headnote 3(b), TSUS, these track shoe were appraised on the American selling price of the Brooks Super Lady Villanova which was $14.40 per pair less 2 percent.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

C1

Counsel for the protestant claims that the correct domestic prototype is the "Sunstar", the American selling, price of which was $7.65. Counsel states that for the period involved this value was used by Customs as the appropriate American selling price for "average quality" women's joggers of the type involved here.

ISSUE:

Are the imported women's track shoes more similar to the Brooks Super Lady Villanova than they are to the "Sunstar"?

LAW AND ANALYSIS:

For administrative purposes Customs presumed that shoes from certain importers were of "average quality" if their FOB'S were below a certain price. The presumption that a shoe was of "average quality" is stated to require, for exports from June 1, 1978 to March 1, 1979, that the FOB price be under $4.75. The $4.75 price is for the men's version of the shoes. All the shoes involved were womens and their FOB's were $4.88 or $5.52 so the presumption does not apply.

Even if the presumption applied to the shoes in issue, the Form 35 shows that we were individually reviewing the imports of a number of brands, including Osaga, to arrive at specific prototypes for each style. The Osaga brand was included on the list due to its advertising in and being

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

C2

076789

evaulated by serious running magazines and due to the comparatively high prices and quality of its shoes. When we examined the two styles involved, the "Feather" and the "KT-26", it was apparent to us that they were more similar to the Brooks Super Lady Villanova that to any other shoe including the "Sunstar" STO series jogger.

Inasmuch as the protestant has not provided samples or argumentation to back up his claim that the "Sunstar" is more similar, we will not give a detailed explanation of the factors used in making our selection of the Brooks Super Lady Villanova.

Regarding the protestant's point that these shoes were made by ICC Corporation of Korea, we can confirm that this firm exported to the United States millions of cheap joggers of mediocre or low quality. However, it should be noted that ICC made some very good to excellent joggers for NIKE and others.

HOLDING:

The protest should be denied. A copy of this decision should be attached to the Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P. Schaffner

076799 DW

076799

District Director of Customs
610 S. Canal Street
Chicago, Illinois 60607

Dear Sir:

Your memorandum dated July 17, 1985, referred to a request for internal advice by Boris Smoler and Sons concerning the tariff classification of a sundress with a bolero style jacket.

A copy of the importer's submission which was missing from our file was requested from a member of your staff in a telephone conversation on October 18, 1985.

The merchandise in question as depicted in the submitted catalogue excerpt consists of several styles of sundresses and coordinated bolero jackets.

Basically, the inquirer urges classification of the sundress and jacket as a single garment. It is stated that the dress and jacket are imported and packaged together and intended to be sold and used together. The inquirer believes that the increased use of air conditioning necessitated the addition of a jacket that can be worn with a sundress that has exposed arms, shoulders and neckline. The inquirer points out that the value of the bolero represents a fraction of the garment's value because less material is required to manufacture the bolero. And the inquirer notes that it has been importing this type of merchandise since 1982, as an entirety classified as a dress in item 383.48, (now item 384.49) Tariff Schedules of the United States (TSUS) under category 336. That this classification had been reviewed and concurred with is not denied by your office.

The law applicable to the classification of garments sold together as a unit has recently been changed with the enactment of the Trade and Tariff Act of 1984, Pub. L. 98-573 (approved October 30, 1984). Section 122 of the Act addresses the classification of wearing apparel by adding a Headnote 3 to Part 6 of Schedule 3, TSUS. This addition appears in the 1985 TSUS. The headnote provides that apart from certain exceptions, each garment is to be separately classified under the appropriate tariff item, even if two or more garments are imported together and designed to be sold together at retail.

The new headnote virtually eliminates the classification of two or more garments as an entirety, when they may be classified in separate items. The headnote, therefore, eliminates tests used in the past, such as

c4

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

color coordination, and constitutes a prohibition against finding entireties where two or more garments that may be worn separately are involved.

The exception to the headnote that plausibly may apply to the subject merchandise is for suits. But, Customs has never considered a dress and jacket to constitute a women's suit for tariff purposes. Thus, the involved dress and jacket do not fall within the exception.

The inquirer also may be successful on its claim if the bolero jacket is not considered to be a garment for tariff purposes. A typical definition of a garment found in The American Heritage Dictionary (1976 ed.) is "any article of clothing, especially of outer clothing such as a coat or a dress." In the same lexicon, a bolero is defined as "a short jacket, usually with no front fastening, worn by both men and women." Unquestionably, a bolero jacket is a garment for tariff purposes. It follows, necessarily, that the sundress and bolero jacket are separately classifiable.

Accordingly, assuming the merchandise is in chief value of cotton, the sundress is classifiable under the provision for other women's wearing apparel, of cotton not knit, dresses in item 383.4821 (now item 384.4921) TSUS, with two or more colors in the warp and/or filling or in item 383.4825 (now 384.4925) if the statistical suffix is other. The textile category number is 336. The jacket is classifiable under the provision for other women's wearing apparel, not ornamented of cotton, not knit, coats in item 383.3200 (now 384.3500) TSUS. The textile category number is 335.

In the future, the file should be sent to the Customs Information Exchange for processing as an Internal Advice request.

Sincerely,

Harvey B. Fox

Mrs. Judy Cook
Manager, Import Dept.
Pagoda Trading Co. Inc.
44 Kimler Drive
St. Louis, Missouri 63043

Dear Mrs. Cook:

In a letter dated June 26, 1985, you inquired as to the dutiable status of certain footwear produced in Korea having uppers made of polyurethane coated nylon fabric. Swatches of the material which will be used in manufacturing the uppers have been submitted for examination.

Schedule 7, Part 1, Subpart A, Headnote 3, Tariff Schedules of the United States (TSUS), provides that "For the purposes of items 700.51 through 700.56, the rubber or plastics forming the exterior surface area specified, if supported by fabric or other material, must coat or fill the supporting material with a quantity of rubber or plastics sufficient to visibly and significantly affect the surface otherwise than by change in color, whether or not the color has been changed thereby."

Examination of the samples, one of which is uncoated, the other two of which have differing amounts of coating, reveals that the uncoated swatch weighs roughly 16.73 grams per square foot. The single coated sample and double coated sample weigh about 20.61 grams per square foot and 22.38 grams per square foot, respectively. Thus, the coatings weigh roughly 3.88 grams per square foot for the former and 5.65 grams per square foot for the latter. We do not regard this measurement as determinative in a classification question but it does provide a useful guide as to the quantity of coating involved in this particular case.

Your attention is invited to a notice published as T.D. 81-219 which interpreted the case of H. Rosenthal Co. v. United States, 81 Cust. Ct. 77, C.D. 4769 (1978). In that case the court held that the fabric from which certain coats were constructed fell within the definition of "coated or filled" in Schedule 3, Part 4, Subpart C, Headnote 2(a), TSUS. That definition which is similar to Schedule 7, Part, 1 Subpart A, Headnote 3, TSUS, requires that for a fabric to be coated or filled for tariff purposes, the coating or filling must visibly and significantly affect its surface, other than by a change in color. Specifically, Customs stated that it would consider the surface of a fabric to be visibly affected by a coating or filling if the following criteria were met:

1. The coating or filling material can be separately distinguished from the fabric by the naked eye;

C6

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

2. the coating or filling material imparts a shine, luster or glossy appearance, or a dull appearance, that is not noticeable by a casual examination; or

3. the coating or filling material has caused the fabric to have a pronounced (obvious) appearance of stiffness. In regard to the appearance of stiffness, the fabric should appear significantly more rigid than that fabric would be if not coated or filled.

It is our observation that these coatings are not discernable to the naked eye. In fact they are barely distinguishable under 10 power magnification.

We do not think that the coatings impart an obvious appearance of stiffness to the fabric. While a handling of the swatches indicates a degree of stiffness, T.D. 81-219 requires the appearance of stiffness. Inasmuch as we do not have a finished item of footwear, we cannot categorically decide on this factor. However, it is our experience that this type of material is commonly used on lined winter boots. The thick lining material causes the boots to possess a stiffness. Thus, such an item is not akin to a jacket or some other type of loose fitting garment in which an appearance of stiffness might be readily apparent. Therefore, we would study the swatches side-by-side without manipulating them. Under those conditions we do not believe the coated swatches appear stiffer than the uncoated fabric.

Although the nylon is somewhat shiny on its own, comparison of the three swatches shows a readily apparent shine added to the coated swatches by the polyurethane. A question has arisen whether there can be such a thing as a de minimis amount of shine on a fabric. We do not believe the de minimis concept is applicable here because the plastic coating has given the swatches characteristics they would not possess had the plastic coating not been added. Specifically, it appears that the plastic coating was added to increase the eye appeal and saleability of footwear having uppers of this material. See Varsity Watch Company v. United States, 34 CCPA 155, C.A.D. 359 (1947).

In view of the foregoing it is our position that the plastic coating visibly and significantly affects the surface of the coated swatches and these swatches would be considered to have an exterior surface area of plastics for tariff purposes.

Sincerely,

Harvey B. Fox

Mr. Mick W. Blakely
C. F. Liebert, Inc.
P.O. Box L
Blaine, Washington 98230

Dear Mr. Blakely:

You inquired about the tariff classification of a framed lithographic print produced in Canada for your client, Creative Fine Art and Framing of Canada. You submitted a sample with your inquiry.

The sample consists of a lithographic print mounted and framed with decorative wood moldings. The back is sealed with paper, and a metal hanger is attached.

The lithograph and the wooden frame are separable, so they are separately classifiable. The lithograph is classifiable under the provision for lithographs on paper, not over 0.020 inch in thickness, in item 274.60, Tariff Schedules of the United States (TSUS), dutiable at the 1985 rate of 6 cents per pound. The wooden frame is classifiable under the provision for picture frames, of wood, in item 206.60, TSUS, dutiable at the 1985 rate of 6 percent ad valorem. See Customs Headquarters Ruling Letter (HRL) 060656 of November 6, 1980, HRL 063215 of August 9, 1979, HRL 038080 of March 26, 1975, and HRL 033556 of July 10, 1974. See also R.J. Godwin's Sons, Inc. v. United States, 66 Treas. Dec. 623, T. D. 47373 (1934), in which the court held lithographic prints and the frames in which they were mounted not classifiable as entireties.

Sincerely,

Arthur J. Schaffner

809460

076868

Dear

You asked us to affirm New York letter 809460 of May 24, 1984, in light of a new production method. New York letter 809460 had classified a certain product manufactured by your client,
under the provision for cloth-lined or reinforced paper in item 253.3500, Tariff Schedules of the United States (TSUS).

Previously you had advised Customs that the product would be manufactured in one continuous process. Now it is anticipated that the product will be made in two separate steps.

In the first step, the fiberglass mesh, which is the component of chief value, will be formed, bonding adhesive will be applied to the mesh, tissue paper will be applied to the mesh-adhesive, the mesh-adhesive-paper product will be dried, and the product will be wound on rolls.

In the second step, this product will be unwound, saturated with the polyvinyl chloride component, dried, and rewound for sale.

After consideration, we have decided that the changes in producing this product do not materially change the basic premises upon which New York letter 809460 is based. New York letter 809460 is still valid. The Bayex product is classifiable in item 253.35, TSUS.

Sincerely,

Arthur P. Schifflin
Chief, General
Classification Branch

Daniel A. Pinkus, Esq.
Assistant Chief Counsel
International Trade Ligitation
26 Federal Plaza
New York, New York 10007

Dear Mr. Pinkus:

Re: Coleco Industries, Inc. v. United States
Court Nos. 83-9-01261 and 83-9-01259

In a letter dated August 26, 1985, you called our attention to the case of Childcraft Education Corp. v. United States, Appeal No. 83-1428 (1984), wherein the appeals court held that certain articles known as "Teaching Typewriters", "Touch to Learn" and "Touch and Match" are not classifiable as toys under item 737.90, (currently item 737.95), Tariff Schedules of the United States (TSUS), because they are not chiefly used for the amusement of children.

You point out that Childcraft appears to negate Headquarters Ruling letter No. 069972C dated February 17, 1983, (Decision on Application for Further Review of Protest No. 1001-1-010164), holding that a product consisting of a "Magic Touch" pen and question/answer cards is chiefly used for the amusement of children and, therefore, is classifiable under the provision for other toys, not specially provided for, in item 737.95, TSUS.

You have informed us that upon recipt of a proposed stipulation from the plaintiff, you have discused this matter with National Import Specialist Stephanie Joseph. You indicate that upon a review of the samples Mrs. Joseph stated that in her opinion the merchandise involved is not chiefly used for the amusement of children but is primarily used for educational purposes, much in the same way as the "Touch and Match" articles which were the subject of Childcraft.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

C10

Based on the result reached in Childcraft and the opinion expressed by Mrs. Joseph, it is your observation that the subject merchandise is not a toy for tariff purposes.

In the event that we agree that the merchandise is precluded from classification under item 737.95, TSUS, you pose the following questions:

(1). Is the "Magic Touch" set classifiable under item 688.45, TSUS,?

(2). Are the pens, when imported separately, classifiable under item 688.45, TSUS?

(3). Are the cards, when imported separately, classifiable under item 256.90, TSUS?

We agree that the set in issue is precluded from classification under item 737.95, TSUS, as it is not chiefly used for the amusement of children. It is our view that the "Magic Touch" set is classifiable under the provision for other electrical articles and electrical parts of articles, not specially provided for in item 688.45, TSUS. The "Magic Touch" pens, when imported separately, are also classifiable under item 688.45, TSUS. The cards, when imported separately, are classifiable under the provision for other articles of paper, not specially provided for, in item 256.90, TSUS.

Sincerely,

Arthur P Schaffer

Harvey B. Fox
Director, Classification
& Value Division

076886

Mr. Michael Welch
International Manufacturing Company
8300 N. E. Underground Drive, Suite 204
Kansas City, Missouri 64141

Dear Mr. Welch:

You have inquired about the tariff classification of a car cover. A sample was provided along with the request dated June 14, 1984.

The sample car cover designed to cover an automobile is constructed from a woven fabric that is a blend of 65 percent polyester and 35 percent cotton. The cover is contained in a tote bag with carry handles and a zipper closure. An elliptical-shaped globe logo embroidered on the bag is approximately 1 1/2 inches long and 3/4 wide. Two narrow lines about 5/8 of an inch long by 1/8 of an inch wide at approximately the equator emanate from each side of the globe.

Although the sample cover does not feature the embroidered globe logo, you advised our New York office that the logo will be sewn onto a corner of the cover.

The issue raised by this request is whether the label ornaments the car cover. In order to constitute ornamentation for tariff purposes, a feature must be listed as a form of ornamentation in Schedule 3, Headnote 3, and serve a primarily decorative rather than utilitarian function.

In the case of United States v. Endicott Johnson, 67 CCPA 47, C.A.D. 1242 (1980), the court adopted a two step test to use in determining whether a feature constitutes ornamention for tariff purposes.

1. Does the feature impart no more than an incidental decorative effect? and,

2. Does the feature have a functionality which is primary to any ornamental nature?

Under the Endicott Johnson test, we believe that the logo although highly decorative is so small and insignificant when compared to the expensive car cover it is claimed to ornament that it imparts no more than an incidental decorative effect. Therefore, the globe logo does not ornament the car cover.

Accordingly, the car cover is classifiable under the provision for other articles not specially provided for, not ornamented, of man-made fibers in item 389.62, TSUS, with duty at the rate of 8 cents per pound plus 11 percent ad valorem.

C12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Even if the logo were enlarged on the car cover it probably would not constitute ornamentation. Recently, the Customs Service had the opportunity to consider whether a large, prominent label ornamented a car cover. In our ruling dated August 28, 1985, file No. 076579, in which we indicated that such a label must ornament the car cover in an accepted trade sense, we stated:

> In those instances where we lack information regarding whether certain features ornament the fabric or article in an accepted trade sense, the Customs Service follows the principle expressed in Excelsior Import Associates, Inc. v. United States, 66 CCPA 1, C.A.D. 1212 (1978), that in the absence of evidence by the importer concerning whether the garment was ornamented in an accepted trade sense, the fact that consumers regard a certain feature as enhancing a garment is determinative.
>
> * * * *
>
> No evidence has been presented on the status in the trade of car covers with labels. If the presence of a decorative label on a car cover is considered by the trade to ornament such merchandise, we would probably consider the subject car cover to be ornamented for tariff purposes.
>
> Nor has evidence been presented that consumers regard the label as enhancing the car cover. In our opinion, a consumer when viewing the subject car cover which is an industrial product would not consider the label to embellish the appearance of the car cover. That is to say there may be certain industrial products which by their very nature are not capable of being ornamented for tariff purposes.
>
> * * * *
>
> This office is not willing to carry this position to its extreme conclusion and say that no label will ever ornament a car cover. A label must be judged on the basis of the particular facts in each case.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

U.S. Customs Service
6 World Trade Center
New York, New York 10048

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-3-012408

This protest was filed against your decision in the liquidation on June 17, 1982, of entry No. 1001-83-807509-0 dated October 15, 1982, covering a shipment of ladies' rompers.

FACTS:

The sample submitted is a lady's romper manufactured from a 100 percent woven cotton fabric. The romper features a fully elasticized waist, adjustable shoulder straps secured by D rings, elastic at the underarm portion and three patch pockets on the front, one with a button secured flap. The leg openings feature a facing turned outward forming a cuff; the cuff is stitched in place at the inseam and side seam. A tab and D ring appear at the leg edges at each side seam.

The tabs on the legs of the rompers were considered by Customs to constitute ornamentation. Consequently, the romper was classified as an ornamented garment in item 383.08, Tariff Schedules of the United States (TSUS). Protestant claims that the tab in question imparts no more than an incidental decorative effect and is functional. Consequently, protestant urges classification under a provision for non-ornamented garments in item 383.50, TSUS.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D1

ISSUE:

Whether tabs and D rings on ladies' rompers should be considered ornamentation for tariff classification purposes?

LAW AND ANALYSIS:

Protestant claims that a feature on a garment does not constitute ornamentation if it provides only an incidental decorative effect or if the decorative effect is outweighed by its functional capability. We agree with this summary of the law on ornamentation. See United States v. Endicott Johnson Corp., 67 CCPA 47, C.A.D. 1242 (1980), Pistol Fashions, Ltd. v. United States, 5 C.I.T. 284 (1983) and Ferriswheel v. United States, 68 CCPA 21, C.A.D. 1260 (1981). However, we do not agree with protestant's conclusion that the tabs on these rompers impart no more than an incidental decorative effect and have a functional capability which outweigh their decorative effect. Nor do we agree with protestant's contention that these tabs and D rings are similar to the hammer loops on jeans which were considered non-ornamented in Brittania Sportswear v. United States, 5 C.I.T. 212 (1983) and the tabs and D rings on trench coats which were also considered non-ornamented in C.S.D. 84-10.

We cannot say that the features at issue are plain, insignificant, nor unobtrusive in appearance in relation to the entire garment. The tabs and D rings are highly decorative in appearance and serve no real function on the garment. Since the cuffs on the legs are turned up and stitched in place at the seams, it is unlikely that the leg is designed to be hiked up as claimed by protestant. Additional rolls would expose unsightly seam edges and create bulk and buckling at the inseam.

HOLDING:

In view of the foregoing, this merchandise was properly classified in item 383.08, TSUS. Therefore, you should deny this protest in full.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Mr. Bob Milne
International Bag Manufacturing Ltd.
1-2351 Simpson Road
Richmond, B.C., Canada V6X 2R2

Dear Mr. Milne:

Your letter dated May 20, 1985, concerning the tariff classification and country of origin of polypropylene tubing addressed to our New York office has been referred to Customs Headquarters for a response. Samples of the merchandise have been provided.

The sample merchandise which is constructed of tubular woven polypropylene strips is purchased in the Far East and sent to Canada where it is cut, printed and sewn into a finished shipping bag.

It is well-settled that plastics materials processed into filaments, strips, or fibers are textile materials in the form of man-made fibers. The subject tubing constructed of tubular woven polypropylene strips satisfies the dimensional requirements for man-made fibers in Headnote 3(d), Part 1C, Schedule 3, TSUS.

The penultimate issue raised by this ruling request is whether the subject tubing is classifiable as unfinished bags and sacks, or other shipping containers, of textile materials, of man-made fibers in item 385.53, Tariff Schedules of the United States (TSUS).

In our opinion, the subject tubing appears dedicated to use as a bag and in its condition as imported the identity of a particular bag is ascertainable. Therefore, the tubing is classifiable in item 385.53, TSUS, dutiable at the rate of 4 cents per pound plus 11.3 percent ad valorem.

We are unable, however, to determine the country of origin of the subject tubing without detailed explanations of the processing done in each country, including (1) what is done at each stage of manufacture, and by whom, (2) complete descriptions of the machines involved, the skills required to operate those machines and to do any other processing, (3) the capital investment involved with each processing operation, and (4) data concerning the time and costs involved with each processing operation.

D4

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

We believe that the following information may be helpful. Under the final rule containing the country of origin regulations that was published in the Federal Register on March 5, 1985, as T.D. 85-38 (50 F.R. 8710), cutting to length or width and hemming or overlocking fabrics which are readily identifiable as being intended for a particular commercial use does not result in a substantial transformation of the merchandise. Section 12.130(e)(2)(ii), Customs Regulations.

We note, also, that under section 12.130(e)(2)(v), Customs Regulations, dyeing and/or printing of fabric and or yarns usually will not result in a substantial transformation of the merchandise.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

23 OCT 1985

W. A. King
Purchasing Agent
TIM DONUTS LIMITED
874 Sinclair Road
Oakville, Ontario Canada
L6K 2Y1

Dear Mr. King:

This is in reply to your letter dated August 27, 1985, requesting a ruling allowing certain dry mixes to be imported into the United States without being subject to Presidential Proclamation 5340.

The dry mixes in question consist of flour, sugar and shortening as principle ingredients. In addition each product incorporates a number of minor ingredients including milk powders, salt, starch, leavening, flavours etc. The dry mixes in question are classified under item 183.01, Tariff Schedules of the United States (TSUS).

Presidential Proclamation 5340 amended Presidential Proclamation 5294 to impose a quota on articles described in item 958.17, TSUS, covering "[a]rticles containing over 10 percent by dry weight of sugars derived from sugar cane or sugar beets, whether or not mixed with other ingredients, except (a) articles not principally of crystalline structure or not in dry amorphous form that are prepared for marketing to the retail consumer in the identical form and package in which imported..." provided for in items 156.45, 183.01, 183.05, TSUS.

While your submission does not indicate the percentage of sugar contained in the imported product, we assume that it is greater than the 10 percent figure set forth in Presidential Proclamation 5340 and it is apparent to us that your products are specifically the type of products set forth in Presidential Proclamation 5340 as being subject to quota. Under these circumstances, we have no alternative but to deny your request.

Sincerely,

Arthur P. Schaffer

for Harvey B. Fox
Director, Classification
and Value Division

Mr. Hans Wolf
Pausa AG
7406 Mossingen
Tubingen, West Germany

Dear Mr. Wolf:

You have requested the country of origin of 100 percent cotton greige goods from Peru that are finished in West Germany.

As you indicated in your letter of July 11, 1985, greige cloth from Peru is sent to West Germany where it is scoured, boiled with sodium hydroxide solution, bleached with hydrogen peroxide, dried and framed. Then the cloth is printed with warp dyes in multi-colored designs. To complete the processing of the cloth, a variety of finishing processes such as dye-fastening, oxidizing, washing, predrying, treatment for water and stain repellant finish, framing and calandering are performed. You note that substantial shrinking occurs during the finishing process.

We are unable to provide you with a ruling on the country of origin of the instant goods without a detailed explanation of the processing done in each country, including (1) what is done at each stage of manufacture, and by whom, (2) complete descriptions of the machines involved, the skills required to operate those machines and to do any other processing, (3) the capital investment involved with each processing operation, and (4) data concerning the time and costs involved in each processing operation.

We would like to add, however, that under section 12.130(e)(1)(i), Customs Regulations, usually fabric will be a product of the country where it has undergone dyeing and printing along with two or more of the following finishing operations: bleaching, shrinking, fulling, napping, decating, permanent stiffening, weighting, permanent embossing, or moireing. The subject fabric has not been dyed; therefore, probably it would not be regarded as a product of West Germany.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Mr. William T. Cariano
Leitz Tooling Systems, Inc.
4301 East Paris Avenue, S.E.
Grand Rapids, Michigan 49508-3980

Dear Mr. Cariano:

In a letter ruling dated June 6, 1985 (file 813819), it was stated that certain planer, indexible, and profile knives were classifiable under the provision for other knives and cutting blades for power or hand machines in item 649.67, Tariff Schedules of the United States (TSUS). Upon review of descriptive literature which was received after the letter of June 6, 1985, was issued, it is our position that these knives are, for tariff purposes, classifiable as interchangeable tools rather than as knives or blades. Therefore, this letter ruling revokes the ruling of June 6, 1985.

Not all items described as "blades" or "knives" are classifiable as such for tariff purposes. We have consistently classified articles, designed as the cutting part of reamers, planers, or similar machine tools or hand tools, as interchangeable cutting tools rather than as knives or blades in item 649.67, TSUS, because these cutters do not fall within the common meaning of knife or blade (a device used to cut by slicing, shearing, or chopping.) The cutters in issue are used to shape or smooth a workpiece.

Therefore, the proper tariff classification for the three cutters is item 649.43, TSUS, with a dutiable rate of 9.2 percent ad valorem. Pursuant to section 177.9(d)(2), Customs Regulations (19 CFR 177.9(d)(2)), this ruling is to be applied retroactively to entries of these articles because your initial request for a ruling was made at a time when the transaction was current, rather than prospective.

Sincerely,

Arthur P. Schaffner

Mr. Peter S. Rodgers
VPV International Limited
Unit 09, Wenta Business Park
Coine Way, Watford WD2 4ND
England

Dear Mr. Rodgers:

Your letter dated August 14, 1985, requested the tariff classification and country of origin of certain knitted wearing apparel.

You state that the garments will be manufactured either wholly in the United Kingdom or manufactured in Turkey and sent to the United Kingdom for printing.

As you point out in your letter, the garments that are manufactured wholly in the United Kingdom are not subject to import restrictions. We are unable to determine, however, the country of origin of the garments manufactured in more than one country without actual samples of the merchandise in its condition as exported from Turkey and as imported into the United States, coupled with detailed explanations of the processing done in each country, including (1) what is done at each stage of manufacture, and by whom, (2) complete descriptions of the machines involved, the skills required to operate those machines and to do any other processing, (3) the capital investment involved with each processing operation, and (4) data concerning the time and costs involved in each processing operation.

For your information, under section 12.130(e)(2)(v), Customs Regulations, dyeing and/or printing of fabrics or yarns in a country usually will not result in considering the goods to be a product of that country.

Turning to your inquiry about the tariff classification of certain women's and children's garments, we regret that we are unable to issue a ruling without samples and/or detailed descriptions of the articles. As far as we can tell from your letter, generally women's and children's cotton T-shirts that are not ornamented for tariff purposes are classifiable in item 384.29, Tariff Schedules of the United States (TSUS),

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D/O

dutiable at the rate of 21 percent ad valorem. If the T-shirts are ornamented, they are classifiable in item 384.02, TSUS, with duty at the rate of 25.7 percent ad valorem.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Mr. Russ Hoffer
Sears Roebuck and Co.
Sears Tower - Department 733X
Chicago, Illinois 60684

Dear Mr. Hoffer:

In a letter dated June 18, 1985, you inquired as to the dutiable status of a robot shaped combination lock produced in Japan. A sample was submitted for examination.

The sample, a padlock robot, measures 3 or 5 inches in length depending on whether it is in an extended or compact position. It is composed of zinc alloy, plastic, and steel. The robot is in chief value of metal and is in chief weight of the zinc alloy.

The sample is a sturdy functional lock operated by a three number combination. Its physical parts may be moved about to the fullest extent when the locking shackle is in an unlocked position. The lock and movable parts of the robot are one unit and the lock may not be separated from the rest of the article.

The padlock robot is a functional lock and also provides an element of amusement. You advise us that this article will be advertised in the toy section of your catalog as suitable for ages 5 and up. However, sale of the article in the toy department does not necessarily compel classification as a toy. The manufacturer in this instance appears to be capitalizing on a "hot" concept in children's products and has produced a lock in a novelty housing.

It should be noted that the toy features of the robot cannot be overlooked. In aiming your sales at young children who would not be likely to have much use for a functional lock, you are stressing the novelty characteristics of the article as an inducement to purchase the robot. The robot is designed to provide amusement when not in a locked position in the same manner as a toy robot that does not include a functional feature. This particular item may, however, be

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D12

aimed at more than one age group. The five-year-old would be enticed by the toy features of the robot. However, the older child could find the lock useful for a school locker while at the same time be attracted by the novelty feature of the robot.

Schedule 7, Part 5, Subpart E, Headnote 2, Tariff Schedules of the United States (TSUS), provides that "For the purposes of the tariff schedules, a "toy" is any article chiefly used for the amusement of children or adults".

It is our opinion that the robot is not chiefly used for the amusement of children and, therefore, could not be considered a toy for tariff purposes. However, the utilitarian feature of the article (locking function) cannot be said to be its predominate characteristic. Thus, the padlock robot is more than a lock and more than a toy. For this reason it is classifiable under the provision for articles of zinc, not coated or plated with precious metal in item 657.80, TSUS, and dutiable at the rate of 6.7 percent ad valorem.

Sincerely,

Arthur P Schaffer

Herbert Peter Larsen, Esq.
Herrick & Larsen
Attorneys at Law
233 Broadway
New York, New York 10279

Dear Mr. Larsen:

In a letter dated July 24, 1985, you inquired as to the dutiable status of certain novelty animal backpacks manufactured in Korea. A sample of this merchandise was submitted for examination.

The sample Koala "candy bear" model measures approximately 12 inches in height and is in chief value of man-made textile materials. The head, arms and legs of the bear are stuffed but the body cavity is empty. The "candy bear" is dressed in overalls which form the bottom half of the torso with plush fabric forming the top half. The hollow body cavity forms an interior compartment. A zipper closure across the front of the chest of the bear secures this lined compartment and a smaller pouch within. Adjustable textile tape harness straps are attached to the rear of the overalls at the seam and at the back of the stuffed head to form armholes.

Schedule 7, Part 1, Subpart D, Headnote 2(a)(i), Tariff Schedules of the United States (TSUS), provides in pertinent part that "For the purposes of the tariff schedules -(a) the term '<u>luggage</u>' covers (i) travel goods such as *** knapsacks, *** and like articles designed to contain clothing or other personal effects during travel".

Schedule 7, Part 5, Subpart E, Headnote 2, TSUS, provides that "For the purposes of the tariff schedules, a '<u>toy</u>' is any article chiefly used for the amusement of children or adults."

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

D14

General Interpretative Rule 10(e)(i), TSUS, provides that "a tariff classification controlled by use (other than actual use) is to be determined in accordance with the use in the United States at, or immediately prior to, the date of importation, of articles of that class or kind to which the imported articles belong, and the controlling use is the chief use, i.e., the use which exceeds all other uses (if any) combined."

The issue presented is whether the sample Koala "candy bear" is chiefly used for the amusement of children or adults. If so used, it would be considered a toy for tariff purposes. If not so chiefly used, it would be considered luggage for tariff purposes.

It has been asserted that the subject merchandise is a novelty backpack more specifically designed to contain clothing or other personal effects during travel than it is designed to be a toy. The rationale for this position is as follows:

(1) An article can only be considered a toy if there is clear evidence that it is chiefly used as a source of frivolous amusement or play value or that it is chiefly used to give its user the same kind of enjoyment or amusement as a user would derive from those articles normally considered playthings. In this instance the backpack cannot be seen as a source of direct frivolous amusement to the exclusion of any other use.

(2) There is no evidence to show that the Koala "candy bear" is devoid of a functional value or utility or that it is simply a toy figure worn predominantly to experience a frivolous amusement akin to the amusement derived from an obviously humorous toy button or a comical Halloween costume or a whimsical non-functional clip-on monkey. In fact, it can be considered as simply a child's novelty backpack, but a backpack nevertheless. With its harness strap and compartment it is a functional adjunct to a child's environment much like any other child's version of a functional article.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

076982

E1

(3) Merchandise represented by the sample meets the headnote definition of luggage. As previously stated, the lined interior compartment has a functional utility. The main compartment and smaller pouch are designed to contain those personal effects relative to the size of the intended users such as a young student's crayons and small books in the main compartment and treat or milk money in the small pouch.

(4) A survey of retail outlets in the New York area shows that similar animal backpacks are marketed in the school supplies and/or backpack sections of the stores and not the toy departments. Also, advertising literature from two sources indicates the marketing of similar items as backpacks. One brochure describes a bear backpack as a serious "backpack". Further, in a New York newspaper's article on opening day of school, a reporter observed the use of animal backpacks in lieu of more conventional carry bags.

It should be noted that the "candy bear" is designed to be used by two to five year old children. There is no doubt that the item does have a utilitarian function, and also provides play value for the users. In Ideal Toy Corp. v. United States, 78 Cust. Ct. 28, C.D. 4688 (1977), the court made the observation that "When amusement and utility become locked in controversy, the question becomes one of determining whether the amusement is incidental to the utilitarian purpose, or the utility purpose incidental to the amusement."

In this particular instance, it is our position that the utilitarian function of the "candy bear" is incidental to its play value for the following reasons:

(1) The sample is so small as to be confined to use by two to five year old children;

(2) the amount of storage space is minimal;

(3) the sample is in fact a plaything and can provide frivolous amusement to the users. See United States v. Topps Chewing Gum, Inc., 57 CCPA 157, C.A.D. 1022 (1971). Wilson's Customs Clearance, Inc. v. United States, 59 Cust. Ct. 36, C.D. 3061 (1967); and

E2

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

076982

(4) as a practical matter the "candy bear" would not be chiefly used as an article of utility i.e., for the users to carry their personal belongings during travel.

It is your view that the sample "candy bear" is stuffed and is, therefore, classifiable under the provision for toy figures of animate objects (except dolls) not having a spring mechanism; stuffed; valued over 10 cents per inch of height in item 737.30, TSUS, and dutiable at the rate of 6.4 percent ad valorem.

The rationale for your view that the item is stuffed for tariff purposes is that four of the five interior compartments are completely stuffed. Also, that "not completely stuffed" should be equivalent to "stuffed" as "not completely filled" is equivalent to "filled".

Our examination of the sample reveals that its arms, legs and head are stuffed. However, the torso which constitutes a major part of the article is devoid of filling. For this reason we would not consider the "candy bear" to be stuffed for tariff purposes.

Schedule 7, Part 5, Subpart E, Headnote 6, TSUS, provides that "For the purposes of item 737.47, the term "filled" includes toy figures which are not completely filled or are filled with materials such as plastic beads or crushed nutshells but which otherwise possess the characteristics of toy figures classifiable as 'stuffed'."

It is our view that the concept expressed in the cited headnote has application only to merchandise classifiable in item 737.47, TSUS. An extension of this concept to merchandise classifiable under item 737.30, TSUS, would be contrary to our previous rulings as to what constitutes a stuffed article for tariff purposes.

In view of the foregoing it is our position that merchandise represented by the sample is properly classifiable under the provision for toy figures of animate objects (except dolls): not having a spring mechanism: not stuffed: other in item 737.40, TSUS, and dutiable at the rate of 9.6 percent ad valorem.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

076982

E3

This ruling is not intended to cover similar but larger animal backpacks where the amusement value may be incidental or subordinate to the utilitarian function.

Sincerely,

John T Rath

076993

Mr. Alan Bagliore
President
Medline Disposamed
One Medline Place
Mundelein, Illinois 60060-4486

Dear Mr. Bagliore:

With your letter dated September 4, 1985, you enclosed two samples of shoe covers. The first sample marked "A" is said to be a new style having a rubber content of less than 10 percent of the total weight of the shoe cover. The second sample marked "B" is the shoe cover that was previously classified by Customs under item 700.59, Tariff Schedules of the United States (TSUS), because more than 10 percent of its total weight was rubber.

A Customs laboratory analysis has revealed that sample "A" contains 6.9 percent by weight of rubber while sample "B" was found to contain 17.2 percent by weight of rubber. The remainder of each sample consists of nonwoven textile fabric.

Based on the laboratory analysis it is our position that shoe covers represented by sample "A" are properly classifiable under the provision for disposable footwear, designed for one-time use in, item 700.90, TSUS, and dutiable at the rate of 8.8 percent ad valorem or entitled to duty-free treatment under the Generalized System of Preferences, if otherwise qualified.

With respect to sample "B" the law requires that footwear which is over 50 percent by weight of fibers and rubber or plastics with at least 10 percent by weight being rubber or plastics must be classified under items 700.51, TSUS, through 700.71, TSUS, even though they may be described elsewhere in the footwear subpart. Consequently, shoe covers represented by sample "B" are classifiable under the provision for footwear which is over 50 percent by weight of fibers and rubber or plastics with at least 10 percent by weight being rubber or plastics and having uppers of which not over 90 percent of the exterior surface area is rubber or plastics: footwear of the slip-on type, that is held to the foot without the use of laces or buckles or other fasteners, in item 700.59, TSUS, and dutiable at the rate of 37.5 percent ad valorem.

Sincerely,

Harvey B. Fox

Mr. Robert J. Mele
Import Manager
BDP International, Inc.
90 West Street
Suite 1105
New York, New York 10006

Dear Mr. Mele:

Your letter of July 20, 1985, requesting a ruling on a "snapframe" has been recently forwarded to Headquarters for reply. The sample which was included with your submission was received in broken condition.

The "snapframe" consists of a glass cover, a hardboard backing, and metal clips to hold it together. It is used to mount pictures or photographs. In your submission, you state that the component material in chief value is wood. The snapframe has no moldings or other type of border.

In reviewing the various definitions of a frame, we note that they all anticipate some type of border. See for example, the Second College Edition of Webster's New World Dictionary (1972 World Publishing Company) which defines "frame" as, "a border, often ornamental, surrounding a picture, etc." In accord is the definition set forth in Webster's Third New International Dictionary, which provides:

> ...an open case or structure made for admitting, enclosing, or supporting something (as one that encloses a window, door, or picture)...
>
> an enclosing usu. rectangular and esp. ornamental border.

The "snapframe" has no moldings or other type of border. Consequently, it is our opinion that the article may not be considered a "frame." Accordingly, it is appropriately classified under item 207.00, TSUS, which provides for articles not specially provided for, of wood.

Sincerely,

Arthur P. Schaffner

REFER TO

CLA-2 CO:R:CV:G

077010 DW

District Director of Customs
Savannah, Georgia 31401

07 NOV 1985

Dear Sir:

Re: Application for Further Review of Protest No. 1703-5-000066

This application for further review was filed against your decision in the liquidation on February 8, 1985, of entry No. 479055 dated July 24, 1984.

FACTS:

The merchandise involved in this protest consists of vertical blind vane material composed of woven man-made fiber fabric that is filled with polyvinyl acetate plastic. It was entered under the provision for narrow fabrics, of man-made fibers, other, in item 347.70, Tariff Schedules of the United States (TSUS), but was classified in liquidation under the provision for woven or knit fabrics (except pile or tufted fabrics), of textile materials, coated or filled with rubber or plastics material, or laminated with sheet rubber or plastics, of man-made fibers, other in item 355.82, TSUS.

ISSUE:

Whether the vertical blind vane material that has been impregnated with a plastic filling satisfies the definition for coated or filled fabrics in Headnote 2(a), Subpart 4C, Schedule 3, TSUS.

LAW AND ANALYSIS:

As suggested by counsel for the protestant in his submission, the test used to determine whether a fabric is "coated or filled" for tariff purposes requires that the coating or filling material visibly and significantly affect the surface or surfaces of the fabric to which it has been applied by other than a change in color.

THIS DOCUMENT ... RELEASED TO THE PUBLIC

E7

077010

A fabric that is visibly stiffer after the addition of a plastics material that is visible only upon microscopic inspection has been held by the court to satisfy the meaning of "coated or filled" for purposes of the headnote. H. Rosenthal Co. v. United States, 81 Cust. Ct. 77, C.D. 4769 (1978), aff'd. C.A.D. 1236 (1979).

Protestant acknowledges that "the coating imparts a certain amount of stiffness to the fabric." Yet, we are invited to believe that the coated and uncoated versions of the fabric are visibly indistinguishable. It is claimed that under Headquarters Ruling Letter 038986 dated May 9, 1975, in which Customs ruled that a small quantity of latex coating which appeared to impart stiffness to the fabric did not constitute a coating for tariff purposes, the subject merchandise is not coated or filled for tariff purposes.

That ruling was issued before the Rosenthal decision and represents the former position of Customs that the coating itself must be visible to the naked eye.

In light of the Rosenthal decision, Customs issued an interpretation of the decision in T.D. 81-219, where the following criteria were listed for determining whether the surface of a fabric is visibly affected by a coating or filling:

> (1) the coating or filling material can be separately distinguished from the fabric by the naked eye; (2) the coating or filling material imparts a shine, luster or glossy appearance, or a dull appearance that is noticeable by a casual examination; or (3) the coating or filling material has caused the fabric to have a pronounced (obvious) appearance of stiffness. In regard to the appearance of stiffness, the fabric should appear significantly more rigid than that fabric would be if not coated or filled.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E8

011010

At any rate, T.D. 81-219 revoked all rulings that were not in accordance with the foregoing criteria under the authority of section 177.9(d), Customs Regulations.

Representative samples of the treated and untreated fabrics submitted on October 22, 1985, are supportive of Customs classification of the vane material. In our opinion, the filling visibly affects the surface of the fabric, and in the words of the protestant "imparts a certain amount of stiffness to the fabric." In this regard, a sample from the subject entry was analyzed by the Customs laboratory which determined that the filling represented 39 percent of the weight of the fabric. Therefore, the vane material is "coated or filled" for tariff purposes.

Although our finding is dispositive of the protest, as a matter of information we note that protestant would have been unable to prevail with its claimed classification as a narrow fabric because the laboratory report indicated that the sample lacks fast edges.

HOLDING:

The merchandise was correctly classified in item 355.82, TSUS. You should deny the protest. A copy of this decision should be attached to your Form 19 Notice of Action to be returned to the protestant.

Sincerely,

For Harvey B. Fox
Director, Classification
and Value Division

Ms. Diana Incivilito
Warnaco Sourcing
350 5th Avenue
65th Floor
New York, New York 10118

Dear Ms. Incivilito:

Your letter dated July 30, 1985, addressed to our New York office regarding the tariff classification of ladies' blouses with ties from Hong Kong has been referred to this office for direct reply to you. Two sample garments, style Nos. L620 and L624, were provided along with your inquiry.

Both styles are ladies' man-tailored blouses manufactured from 100 percent woven cotton yarn dyed fabrics. These blouses are to be imported with unattached coordinated ties measuring approximately 3 inches wide and manufactured from 100 percent silk fabric.

Customs has previously ruled that similar sets are classifiable under the provision for blouses since the tie component of the set is subordinate to the blouse component. See Headquarters Ruling Letter (HRL) dated January 31, 1983, file No. 802002, HRL dated February 10, 1983, file No. 070742, HRL dated September 12, 1983, file No. 072321, and HRL dated December 8, 1983, file No. 072888. Subsequent to the issuance of these rulings, Congress added Headnote 3 to Schedule 3, Part 6, Tariff Schedules of the United States (TSUS), which covers wearing apparel. Headnote 3 provides that:

> (a) Except as provided in (b) of this headnote, each garment is to be separately classified under the appropriate tariff item, even if two or more garments are imported together and designed to be sold together at retail.
>
> (b) The provisions of paragraph (a) of this headnote shall not apply to —
>
> (i) suits,
> (ii) pajamas and other nightwear,
> (iii) playsuits, washsuits, and similar apparel,
> (iv) judo, karate, and other oriental martial arts uniforms,
> (v) swimwear, and
> (vi) infant's sets designed for children who are not over 2 years of age.

E10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

The question posed by your ruling request is whether the tie component is to be considered a "garment" for Headnote 3 purposes. The Fashion Dictionary, M. Picken (1973 ed.) defines the term "garment" as "any article of apparel, chiefly one made of fabric." That dictionary defines "apparel" as "clothing of all sorts; also to clothe or attire." "Clothing" is defined as "any wearing apparel." Finally, "accessories" are defined as "articles of apparel that complete the costume, such as shoes, gloves, hats, bags, jewelry, neckwear, belts, boutonnieres, scarfs."

In view of these definitions and the Congressional intent, as expressed in Headnote 3, it is our view that these blouses and ties should be classified separately. Given the fact that the lexicographic authority considers ties as articles of apparel and garments as articles of apparel, it is appropriate to consider ties as garments for purposes of Headnote 3. Consequently, the blouses and ties are most appropriately classified under separate tariff provisions.

In view of the foregoing, the blouses are classifiable under the provision for blouses in item 384.4605, TSUS, (Category 341) dutiable at the rate of 16.5 percent ad valorem. The ties are classifiable under the provision for woven silk other wearing apparel in item 384.7892, TSUS, dutiable at the rate of 10.3 percent ad valorem, with no textile category applicable. Consequently, only the blouses require visas. Your samples are being returned as requested.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Re: Decision on Application for Further Review of Protests Nos. 1801-3-000019 and 1801-3-000020, classification of Maxepa concentrated Marine Oil

Dear Sir:

Maxepa, a concentrated marine oil, described as a dietary supplement, is said to be made from the oil of the anchovy, and, therefore, classification under item 177.12, fish oils other than liver oils, anchovy, was requested. Based on laboratory reports, the port classified the product under the provision for artificial mixtures of two or more fish oils in item 178.30, TSUS. Initially the Customs laboratory report stated that the sample had the characteristics of fish oil, other. A supplemental report stated that the importer called and verified that the product was a mixture of fish oils. However, a statement from the manufacturer is to the effect that the oil shipped to the United States has only been from one species of fish, anchovy, with Vitamin E added as a natural antioxident intended to protect the oil from deterioration. A further statement from the producer is to the effect that the oil in question was produced from a single type fish, anchovy, and the whole anchovy fish is processed into meal and oil. While the liver is included, it is claimed that the amount of oil obtained is virtually nil. Vitamin E, a natural D tocopherol acetate, is added as a natural antioxidant. To the manufacturer's knowledge, no other type of fish is used.

The determination that this oil is an artificial mixture of fish oils is based on the Customs laboratory reports, which indicated in the first report, that the sample had characteristics of fish oil other and in a subsequent report stated that the sample was characteristic of a mixture of fish liver oils. The second report added that the importer verified that the product was a mixture of fish oils. The manufacturer stated that the product is derived from the anchovy and claimed that he never described the oil as a "fish liver oil".

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E12

077017

Information from technical sources is that the analysis of fish oils is extremely complex and can best be made only when the samples are undecomposed and comparisions made with authentic samples. The differences in composition of many marine fish oils are quantitative as to amounts of various similar components present. These various components differ in amounts present in the various oils and hence qualitative determinations as to the origin of a particular oil is based on ratios of each component present as compared with authentic standards. In this case when the sample was first submitted for analysis, it is indicated that there was no information on the sample to show that it was other than a "liver oil." Therefore, it is not clear that it was ever examined for the characteristics of anchovy oil. In the second lab report, reliance was placed on the opinion of the importer, which was denied by the manufacturer. Again no evidence that the oil was tested for anchovy. The Tariff Summary notes that fish oils are obtained from the whole bodies of fish caught primarily for oil and from the trimmings and viscera of fish caught for edible use.

An evaluation of all the evidence does not establish that the oil analyzed was not anchovy oil.

There are many fish oils available in commerce and as there was no indication given at the time of analysis that the oil was from the anchovy, no comparisions were made with an authentic sample of an oil of this type. Therefore, as the oil of the anchovy was never tested for, it can not be concluded that it was not present.

You are directed to allow the protest in full.

A copy of this decision should be attached to the Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P. Schaffner

Ms. Pamela Dooley
Beck Shoe Polisher
P.O. Box 586
St. Peters, Missouri 63376-0586

Dear Ms. Dooley:

Your letter dated August 19, 1985, addressed to our New York office concerning the tariff classification of a disposable PVC hotel slipper produced in Hong Kong, has been referred to us for a direct reply to you. A sample was submitted for examination.

The sample is a heat-seamed PVC scuff with a foamed cushioned cardboard insole.

Item 700.56, Tariff Schedules of the United States (TSUS), provides for other footwear which is over 50 percent by weight of rubber of plastics or over 50 percent by weight of fibers and rubber or plastics with at least 10 percent by weight being rubber or plastics and having uppers of which over 90 percent of the exterior surface area is rubber of plastics. The applicable duty rate is 6 percent ad valorem.

Item 700.56, TSUS, is not applicable to the slipper because cardboard accounts for over 50 percent of its total weight.

Item 700.90, TSUS, provides for disposable footwear designed for one-time use with duty at the rate of 8.8 percent ad valorem or entitled to duty-free treatment under the Generalized System of Preferences (GSP), if otherwise qualified.

The creation of item 700.90, TSUS, by Presidential Proclamation 4707, published in the Federal Register of December 13, 1979, was intended to capture disposable hospital shoe covers which are immediately discarded after one-time use.

The issue presented here with respect to classification under item 700.90, TSUS, is whether these slippers are, in fact, disposable footwear, designed for one-time use.

You have not submitted any documentation to support a claim for classification under item 700.90, TSUS. However, the sample is of inexpensive, flimsy material and construction. We have no reason to doubt that these slippers will be sold to hotels which will then distribute them to their guests. Although the slippers probably are capable of being worn

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

E14

851022

several times before disposal, we are satisfied by their flimsiness that they are not so designed, nor would such a use be intended by a hotel distributing these slippers to their guests. Any such use would be fugitive.

It is our position that footwear represented by the sample slipper is classifiable under the provision for disposable footwear, designed for one-time use in item 700.90, TSUS, and dutiable at the rate of 8.8 percent ad valorem or entitled to duty-free treatment under the GSP, if otherwise qualified.

Sincerely,

Arthur P. Schaffer

Chicago, Illinois 60602

Dear Mr. O'Donnell:

This is in reply to your letter dated September 30, 1985, forwarding a copy of an April 3, 1985, letter addressed to the Department of Agriculture requesting an exemption from Presidential Proclamation 5294 on behalf of your client, Quaker Oats Company.

The particular product for which you seek exemption is Frescavena. Frescavena is a dry beverage mix which is comprised primarily of oats and sugar with various flavors and other ingredients added. The sugar content is more than 50 percent but less than 65 percent. It is our understanding that the product is packaged for retail sale. Subsequent to your April 3, 1985, submission, Presidential Proclamation 5340 was promulgated on May 17, 1985.

Presidential Proclamation 5340 imposed a quota on articles described in items 958.16, 958.17, or 958.18 (TSUS), covering "[a]rticles containing over 10 percent by dry weight of sugars derived from sugar cane or sugar beets, whether or not mixed with other ingredients, except (a) articles not principally of crystalline structure or not in dry amorphous form that are prepared for marketing to the retail consumer in the identical form and package in which imported..."

In reviewing Presidential Proclamation 5340, it is evident that the product you are seeking to import outside the quota was specifically the type of product which was intended to be subject to quota; hence, the reference to "articles not principally of crystalline structure or not in dry amorphous form" in the retail package exemption.

Under these circumstances, we see no basis or authority for exempting the Frescavena from Presidential Proclamation 5340.

Sincerely,

Arthur Schaffer

Stephen Sale, Esq.
Law Offices
Fehrenbacker, Sale, Fudesco & Quinn
Suite 650
1819 H Street, N.W.
Washington, D.C. 20006

Dear Mr. Sale:

In a letter dated October 1, 1985, on behalf of Eastern Silk Trading Co., Ltd., you inquired as to the dutiable status of silk-upholstered room dividers and silk-upholstered headboards manufactured in Hong Kong.

The room dividers are described as having four panels, each of which has a wooden frame upholstered in 100 percent silk fabric. The frames are said to be of teak, rosewood and a black lacquer finish. The only other component of the room dividers will be the metal connectors. These connectors will allow the folding of the room dividers in order to permit moving without disassembly.

The room dividers will be upholstered with silk fabric that is woven in the Peoples Republic of China. The silk is cut, dyed and printed prior to its use in upholstering the room dividers. These dividers will be available in two sizes. The dimensions of each large room divider will be 72 inches by 86 inches. For the smaller room dividers, the dimensions will be 68 inches by 60 inches.

The headboards are described as consisting of wooden frames that are upholstered in 100 percent silk fabric. The frames will be of teak, rosewood and a black lacquer finish.

The headboards will upholstered with silk fabric that is woven in the People's Republic of China. The silk is obtained, cut, dyed and printed in Hong Kong prior to use in upholstering the headboards.

The headboards are said to be of two dimensions. The queen/full size dimensions will be 46 inches by 61 inches while the twin size will be 46 inches by 39 inches. These headboards will have a plush, or slightly overstuffed appearance. For this reason, the silk upholstery will be backed by foam rubber which is covered in a light fabric of 100 percent cotton.

The cost figures for the components submitted by you indicate that the room dividers and headboards are in chief value of wood.

F3

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC

It is your position that the room dividers are furniture for tariff purposes. However, the room dividers described previously are considered wooden screens for tariff purposes. It should be noted that Headnote 1(v), Schedule 7, Part 4, Subpart A, Tariff Schedules of the United States (TSUS), specifically states that "blinds, shutters, curtains, screens, and shades" cannot be classified as furniture. Consequently, the room dividers are classifiable under the provision for other wood blinds, shutters, screens, and shades, all the foregoing with or without their hardware in item 206.67, TSUS, and dutiable at the rate of 8 percent ad valorem.

The headboards are classifiable under the provision for furniture, and parts thereof, not specially provided for, of wood, other than chairs in item 727.35, TSUS, and dutiable at the rate of 3.1 percent ad valorem or entitled to duty-free treatment under the Generalized System of Preferences, if otherwise qualified.

Sincerely,

Harvey B. Fox

Dear Mr. Shamash:

Your letter dated October 1, 1985, requested a ruling on the country of origin of greige goods from Asia that are processed in a European country.

Unfortunately, we are unable to provide you with a ruling without actual samples of the merchandise in its condition as exported from Asia and as imported into the United States, along with detailed explanations of the processing done in each country, including (1) what is done at each stage of manufacture, and by whom, (2) complete descriptions of the machines involved, the skills required to operate those machines and to do any other processing, (3) the capital investment involved with each processing operation, and (4) data concerning the time and costs involved in each processing operation.

We believe, however, that the following information may be helpful. Under section 12.130(e)(1)(i), Customs Regulations, fabric will be usually considered a product of a country where it has undergone dyeing and printing coupled with two or more of the following finishing operations: bleaching, shrinking, fulling, napping, decating, permanent stiffening, weighting, permanent embossing, or moireing.

Sincerely,

Harvey B. Fox

077123

TO : District Director of Customs
San Francisco, California

FROM : Director, Classification and Value Division

SUBJECT: Classification of Orange Sacs and Apple Grains; IA 63/85

The subject internal advice was originated by the Beech-Nut Nutrition Corporation. The file was received in Headquarters in October 1985.

The merchandise in question are apple grains and orange sacs. Apple grains are described in the incoming submission as tiny shavings of fresh apples. Examination of the sample reveals a wet pulpy mass with a distinct apple aroma. The product is of uniform consistency without large pieces of apple. In our opinion based on the information in the file the product is typical of a fruit pulp. Fruit pulps (also called purees) are prepared from fresh, frozen, or canned fruits by various mechanical means, such as grinding or extruding, which pulverizes the fruit to a homogeneous mass. The imported product should be classified as apple pulp under item 152.40, Tariff Schedules of the United States (TSUS).

Page 71 of USITC Publication 841, October 1983, entitled "Deciduous Tree Fruit and Fruit Products" points out that orange sacs are obtained by peeling an orange, removing a section and then taking the membrane off the section. Orange sacs are thus the individual juice cells of the orange flesh which are then suspended in a relatively small amount of orange juice. The product is not a juice because it is not pressed from the flesh of the fruit. It is not a fruit pulp because it lacks the uniform consistency characteristic of a pulp. Therefore, it should be classified as oranges, prepared or preserved in item 147.31, TSUS.

You should advise the internal advice applicant of our decision on this matter.

DOR-7-03-R:CD:C
103946 MKT

District Director of Customs
El Paso, Texas 79985

Dear Sir:

Thank you for your letter of March 28, 1979, regarding one of our decisions on the use of Canadian railroad cars to load domestic cargo while on a trip from Canada to Mexico. When this event took place, possibly a decision could have been made that a penalty existed. However, it is clear from the facts that there was no engagement in local traffic. Nor do we think title 19, United States Code, section 1322, contemplates the assessment of a duty on instruments of international traffic engaged in foreign trade, which these were.

While we believe the petitioner is in technical violation of section 123.12(b), Customs Regulations, as presently written, the intent of the Regulations is to prevent only diversions to unpermitted point-to-point local traffic and not to stymie or stifle any variety of strictly international traffic. In view of the total circumstances of the case, including the question as to the interpretation of the existing regulations, we believe the interests of justice and the Customs Service are best served by remitting the penalty pursuant to the authority contained in section 1618 of title 19.

Sincerely,

/s/ Donald W. Lewis

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

F8

VES-13-18-R:CD:C
103999 JM

This ruling concerns the applicability of title 19, United States Code, section 1466, to equipment imported into the United States for installation on a United States flag vessel other than the importing vessel.

ISSUE:

Is equipment imported into the United States on a vessel other than the United States flag vessel for which the equipment will be used dutiable under the Tariff Schedules of the United States as other merchandise imported into the United States or as vessel equipment under title 19, United States Code, section 1466.

FACTS:

A Japanese corporation plans to establish a wholly owned subsidiary under the laws of New York. The subsidiary will solicit orders for vessel repair parts from United States buyers, order the parts from Japan, import the parts on vessels other than the vessel for which the parts are intended and enter the parts through Customs. It is anticipated that in the future the United States subsidiary will establish an "in bond" warehouse and fill orders out of its inventory.

LAW AND ANALYSIS:

Title 19, United States Code, section 1466, states in pertinent part "The equipments, or any part thereof, including boats, purchased for, or the repair parts or materials to be used, or the expenses of repairs made in a foreign country upon a vessel documented under the laws of the United States to engage in the foreign or coasting trade, or a vessel intended to be employed in such trade, shall, on the first arrival of such vessel in any port of the United States, be liable to entry and the payment of an ad valorem duty of 50 per centum on the cost thereof in such foreign country ...."

In ORR Ruling 924-70 dated October 14, 1970 abstracted as TD 70-214 (24) we held that equipment imported into the United States for installation on a vessel other than the importing vessel is not dutiable under title 19, United States Code, section 1466, but is dutiable under the Tariff Schedules of the United States as other merchandise imported into the United States.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

F9

HOLDING

Section 1466 is not applicable to equipment imported into the United States for installation on a vessel other than the importing vessel. The equipment is dutiable under the Tariff Schedules of the United States as other merchandise imported into the United States.

Signed

[redacted]

Dear [redacted]

Your letter of February 6, 1981, to [redacted] concerning the use of a Japanese-built "Oozer" dredge in the United States, has been forwarded to this office for reply.

Title 46, United States Code, section 292, provides, in pertinent part:

> A foreign-built dredge shall not, under penalty of forfeiture, engage in dredging in the United States [inland and territorial waters]...

Whether or not the dredge presents competition to the American dredging industry is not a condition of the prohibition.

We note that the operation of this dredge has been observed by the Army Corps of Engineers. The prohibition against the use of foreign-built dredges may be waived by Customs in specific cases where deemed necessary in the interest of national defense by the Secretary of Defense.

Sincerely,

(Signed) Alfred G. Scholle

Fishing Operations Proposed by [redacted]

With your memorandum of February 8, 1982, you transmitted a letter dated December 31, 1981, from [redacted] of [redacted] in which he asks a number of questions regarding a proposed fishing operation to be conducted with an American-built and documented vessel of 175 gross tons. Our response to [redacted] proposals are presented below.

1. (a) The transshipment of tuna and/or bi-catch from the vessel to a Japanese vessel outside the Fisheries Conservation Zone (FCZ): There is no law administered by Customs which would preclude this operation.

(b) As above, but within the FCZ and outside the territorial waters of the U.S.: Same answer as above but laws administered by the National Oceanic and Atmospheric Administration (NOAA) may have some bearing on this operation.

(c) Transshipment inside territorial waters or in port: The Nicholson Act, the second sentence of 46 U.S.C. 251(a), prohibits a foreign-flag vessel from landing in a port of the United States fish (or fish products processed therefrom) taken or received on the high seas. Customs has held that transshipment is a landing within the meaning of 46 U.S.C. 251(a). See T.D. 68-206(2). Accordingly, it would be permissible for the U.S.-flag fishing vessel at issue to transship its catch to the Japanese vessel, but the Japanese vessel could not land or transship the catch or fish products processed therefrom inside territorial waters without violating section 251(a). Operations of this nature may, however, be restricted by regulations of NOAA.

2. (a) The use of a commercial transport freezer vessel for the transshipment of tunas and/or bi-catch outside the FCZ: The answer is the the same as 1(a) above.

(b) As above, but within the FCZ and outside territorial waters: The answer is the same as 1(b) above.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

F12

(c) Transshipment inside territorial waters or in port: If the commercial transport freezer vessel is foreign-flag, then the answer is the same as 1(c) above. If the freezer vessel is U.S.-flag, the prohibition of section 251(a) will not apply but the prohibitions of the coastwise laws may apply to the vessel if it is not coastwise qualified. Even if the vessel is not coastwise qualified, it may receive the transshipment within territorial waters provided it does not transport it to another coastwise point and unlade. This prohibition may also be operative if the vessel proceeds to a foreign port and unlades the cargo if it is subsequently transported to the U.S.. This is because 46 U.S.C. 883, a coastwise statute, prohibits any part of a transportation of merchandise between two coastwise points in a foreign vessel. Whether the fish or fish products would be imported into the foreign country so as to break the continuity of the coastwise transportation would depend entirely upon the facts in the particular case.

3. Flying premium tunas by air cargo: This proposal is not entirely clear. If the bi-catch (or the tuna) are landed in the U.S. by the U.S.-flag fishing vessel there are no Customs restrictions we are aware of, and that includes the proposal to subsequently fly the fish to Japan. If the landing is accomplished by a foreign-flag vessel, then the restrictions outlined in 1(c) and 2(c) will apply. It is also asked "which plan will be considered export?" Any operation whereby the fish or fish products are transported from the Customs territory of the U.S. to a foreign country with the intention that the articles are to be commingled with the mass of goods in that country will be an exportation as far as Customs is concerned. Specific information on export permits, procedures, etc., which are not covered in the Customs Regulations should be obtained from NOAA, the Export Control Administration, or any agency which might have an interest in fishing operations.

Regarding Japanese fishing gear and equipment to be installed on the vessel in the United States, such articles are imported under the TSUS and vessel repair duties will not be applicable. See T.D. 70-214(24). However, the equipment cannot be entered under a TIB as there is not an intention to export the equipment. Nor is there any relief available under 19 U.S.C. 1309 because the vessel is not a foreign-flag fishing vessel. Accordingly, duty will have to be paid upon importation (or withdrawal from warehouse) of each item, the rate and amount of duty (if any) being determined by the applicable provisions in the TSUS. See ruling 213247, copy attached.

105518

F13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

[redacted] also outlined a plan whereby Japanese instructors will be transshipped to his vessel outside territorial waters, or will embark and disembark the vessel in a U.S. port. If the instructors are transshipped on the high seas, they may or may not accompany the vessel into port and disembark (temporarily). If the do they will have work visas as regular crewmen.

We perceive of no Customs laws or regulations which would serve to prohibit or restrict the proposals regarding the Japanese instructors. We note that [redacted] states he plans to contact the Immigration Service and the Coast Guard and we presume that those agencies will instruct him on their regulations.

It is proposed that the fishing vessel unload its bi-catch in the U.S. for marketing. We would refer [redacted] to sections 4.96, 10.78 and 10.79, C.R., for pertinent materials regarding this aspect of his proposed operation. If the tuna are landed in the U.S. for transportation to Japan, the T & E and in-bond materials contained in parts 6,18 and 113 of the Customs Regulations should be helpful to the inquirer.

61

DEPARTMENT OF THE TREASURY

U.S. CUSTOMS SERVICE

WASHINGTON

SEP 26 1984

REFER TO
VES-3-CO:R:CD:C
106983 PH

This ruling concerns the use of a vessel for treasure hunting in the coastal waters off of Florida.

ISSUE:

Is the engagement of a vessel in treasure hunting in the coastal waters off of Florida, when treasure is found and brought on board the vessel and transported to a port of the United States, coastwise transportation requiring the vessel to be documented for the coastwise trade?

FACTS:

The inquirer proposes to do some treasure hunting in the coastal waters off of Florida with his 45-foot wooden pleasure cruiser. He asks, if treasure is found and is brought aboard his vessel for transportation to a United States port, whether his vessel would be considered to be engaged in the coastwise trade and need to be documented with the United States Coast Guard.

LAW AND ANALYSIS:

Generally, the coastwise trade is the transportation of merchandise or passengers between points in the United States embraced within the coastwise laws. The coastwise laws (i.e., 46 U.S.C. 289, 883, 12106, and 12110) restrict the engagement in the coastwise trade to vessels built in, documented under the laws of, and owned by citizens of the United States. Related restrictive United States navigation laws include 46 U.S.C. 316(a) (towing), 46 U.S.C. 316(d) (salvaging), 46 U.S.C. 292 (dredging), and 46 U.S.C. 251(a) and 12108 (fishing).

For purposes of the coastwise laws, a point in United States territorial waters is considered a point embraced within the coastwise laws. The territorial waters of the United States consist of the territorial sea, defined as the belt, 3 nautical miles wide, adjacent to the coast of the United States and seaward of the territorial sea baseline. Customs has ruled that "merchandise," as used in the coastwise law regarding the transportation of merchandise (46 U.S.C. 883), includes anything of commercial value.

The inquirer, if he is successful and finds treasure, plans to transport the treasure from the point of discovery to the United States in his vessel. If the point of discovery is

G2

THIS DOCUMENT MAY BE RELEASED TO THE

in United States territorial waters (see above), his vessel would be transporting merchandise between points in the United States and would be engaged in the coastwise trade. To engage in the coastwise trade, it would need to be appropriately documented. If the point where the treasure is discovered and from which it is transported is not in United States territorial waters, the vessel would not be engaged in the coastwise trade. The vessel would not need to be documented in this event.

For the information of the inquirer, property taken from the sea within the jurisdiction of the United States off the coast of Florida must be brought to a port in the United States (46 U.S.C. 722, 723). Any vessel which takes property recovered off the coast of Florida to a foreign port is subject to forfeiture. Also for the information of the inquirer, the United States imposes no duty (under the Tariff Schedules of the United States) on merchandise recovered and brought into port from a vessel which has been sunk in United States waters for 2 years or more and has been abandoned by its owner (19 U.S.C. 1310). When property sunk less than 2 years is formally entered with Customs in the United States, it will be subject to duty under the Tariff Schedules of the United States as imported merchandise.

HOLDING:

The engagement of a vessel in treasure hunting in the coastal waters off of Florida, when treasure is found and brought on board the vessel and transported to a port of the United States, is coastwise trade if the point where the treasure is found and from which it is transported to a port of the United States is in United States territorial waters. If the point where the treasure is found and from which it is transported to a port of the United States is not in United States territorial waters, the vessel would not be engaging in the coastwise trade.

EFFECT ON OTHER RULINGS:

None.

REFER TO
VES-5-18-CO:R:CD:C
107876 PH

Mr. Roger Beaudean
Sales Manager
Leevac Marine Transportation
Post Office Box 2528
Morgan City, Louisiana 70381

Dear Mr. Beaudean:

With your letter of August 23, 1985, you sent a copy of your letter dated August 16, 1985, to the District Director of Customs in New Orleans concerning Customs entrance and clearance requirements for vessels engaged in lightering operations. You are concerned with the amendments to the Customs Regulations described in Treasury Decision 85-91, published in the Federal Register on May 24, 1985 (50 FR 21427).

In your August 23 letter you state that the amendments will, in essence, put your company out of business because the cost of your lightering service will "skyrocket" to the degree that oil companies will "light load" their tankers and not need lightering services. You state that other companies you are aware of which will be affected by this change are Sonat Marine, Moran Towing, and Bouchard.

In your August 16 letter to the District Director you state that your company has been engaged in the lightering and bunkering of foreign tankers via ocean-going tank barges since the early 1960's. You state that you presently lighter tankers and clear the cargo through Customs upon arrival at the destination port. You state that all of your vessels are American-flag and also engage in the coastwise trade.

You describe three examples in which you believe the amendments would adversely affect your company. The examples concern lightering and bunkering. We are quoting them in full below.

> 1. The DOMAR 18 (tank barge) discharges No. 6 fuel oil in Tampa, Florida, and departs light barge back to the upper United States Gulf Coast. The cargo was normal coastwise trade. The voyage takes three (3) days. After one (1) day at sea Exxon calls and wants to lighter one of their foreign tankers at Southwest Pass. We are now in the middle of the Gulf of Mexico.

G4

Does this change mean we have to pass up the tanker at Southwest Pass, come into port, clear Customs, and then go back out and lighter the tanker?

2. The DOMAR 6501 (tank barge) picks up bunkers for a Texaco tanker located at South Sabine Point. This location is 70 miles offshore. Our next job after discharge is the lightering of an Exxon tanker off of Galveston, Texas. Do we have to come back in port (70 miles), clear Customs, and then go out to the Exxon tanker?

3. The DOMAR 6501 (tank barge) picks up bunkers for a Texaco tanker off Corpus Christi, Texas. We make the delivery and our next cargo is to be loaded at Chevron, Pascagoula, Mississippi. Do we have to clear Customs to take the cargo out, then come back into port, clear Customs, and then go to Pascagoula, Mississippi? We can not go from Corpus Christi to Pascagoula in the required 48 hours.

In addition to the examples you describe, the District Director of Customs in New Orleans, who has forwarded to us a copy of your August 16 letter to him about this matter, describes a lightering example and asks if the vessel entrance and clearance requirements apply to it, under Treasury Decision 85-91. In that example:

The M/T EXXON TRADER arrives at the Mississippi River Southwest Pass (outside Customs territory) with foreign crude for discharge in Baton Rouge, Louisiana. Due to draft restrictions at the pass, the tanker must lighter approximately one-eighth of its cargo into the DOMAR 118 (tank barge). After lightering the tanker proceeds through the pass and (now in Customs territory) re-lighters its cargo from the DOMAR 118. The tanker then proceeds to Baton Rouge with all of its cargo on board. The point of re-lightering occurs approximately 80 miles south of the New Orleans port limits. The DOMAR 118 is a United States-flag vessel which engages in coastwise and foreign trade. Does the DOMAR 118 require foreign clearance from Customs prior to lightering the tanker? Is the DOMAR 118 required to make entrance when entering Customs territory? Since the M/T EXXON TRADER is not a sister vessel, may the re-lightering from DOMAR 118 be allowed? If re-loading is not allowed, is a separate entry (CF 3461 or CF 7501) required?

107876

G5

You request a clarification of the amendments affected by Treasury Decision 85-91. If your interpretation is correct, you ask for a change or exemption from the regulation.

Treasury Decision 85-91 amended sections 4.3, 4.9, 4.20, and 4.60, Customs Regulations (19 CFR 4.3, 4.9, 4.20, and 4.60), to require a vessel to obtain clearance if it is bound for another vessel on the high seas to either: (1) transship export merchandise which it has transported from the United States to that vessel; or (2) receive import merchandise from that vessel and transport the merchandise to the United States. A vessel is required to make vessel entry if it is returning from another vessel on the high seas after either: (1) transporting export merchandise out of the United States and transshipping the merchandise to that vessel; or (2) transporting import merchandise to the United States after receiving the merchandise from that vessel. Copies of the Treasury Decision and the Notice of Proposed Rulemaking (Federal Register of October 3, 1984 (49 FR 39072)) and the Advance Notice of Proposed Rulemaking (Federal Register of October 14, 1983 (48 FR 46808)) for the Treasury Decision are enclosed.

Treasury Decision 85-91, as stated therein, was issued to clarify the applicability of the entrance and clearance requirements of the navigation laws to vessels engaged in lightering of import and export cargo between the United States and vessels located on the high seas. There was no intention to expand the applicability of those requirements. Such action would require legislation.

With few exceptions, entrance and clearance requirements are only applicable to vessels when they are in the United States. The very rare exceptions must be by statute. An example of such a statutory exception, although not relevant to your inquiry, is the applicability of the entrance and clearance laws to mobile rigs during the period when they are secured to or submerged onto the seabed of the outer continental shelf beyond the territorial waters of the United States for drilling operations (see Treasury Decision 54281(1)). This is in accordance with section 4(a) of the Outer Continental Shelf Lands Act of 1953, as amended (43 U.S.C. 1333(a)). Normally, entrance requirements of the navigation laws are only applicable to vessels when arriving in the United States from a foreign port or place and clearance requirements of the navigation laws are only applicable to vessels when bound out of the United States for a foreign port or place. Treasury Decision 85-91 clarifies the status of a vessel on the high seas as "a foreign port or place" with regard to the applicability of the entrance and clearance requirements to lighters and other vessels arriving in the United States or bound out of the United States when engaged in the transportation of import and export cargo between the vessel on the high seas and the United States.

107876

In the first example you give, a United States-flag coastwise-qualified tank barge is in the "middle of the Gulf of Mexico" proceeding between United States ports after completing a coastwise movement. The vessel operator receives a request to divert the vessel to a foreign tanker in the Gulf of Mexico to lighter some of the tanker's cargo.

The coastwise-qualified tank barge is on a vessel movement not subject to entrance and clearance requirements (see section 4.81(a), Customs Regulations; 19 CFR 4.81(a)). While on the high seas it receives orders to proceed to a vessel on the high seas and receive import merchandise for transportation to the United States. Since the tank barge was not in the United States but on the high seas in a movement not subject to Customs entrance and clearance requirements when it received orders to proceed to the vessel on the high seas, it is not subject to the clearance requirement of section 4.60(e), Customs Regulations (19 CFR 4.60(e)), as amended by Treasury Decision 85-91.

Of course, on return to the United States with the import merchandise from the vessel on the high seas, the tank barge would be required to enter under sections 4.3(c) and 4.9(a), Customs Regulations (19 CFR 4.3(c) and 4.9(a)), as amended by Treasury Decision 85-91.

In the second example, a United States-flag coastwise-qualified tank barge transports bunkers to a tanker located 70 miles off shore and, after discharging the bunkers, proceeds to lighter a tanker on the high seas. Again, assuming that the tank barge was on the high seas when it received orders to proceed to the tanker on the high seas, the tank barge would not be required by the amended section 4.60, Customs Regulations, to obtain clearance from Customs before proceeding to the tanker on the high seas. Of course, it would be required to enter, by the amended sections 4.3 and 4.9, Customs Regulations, on returning to the United States with the lightered import cargo. The tank barge would not have been required to obtain clearance from Customs before proceeding to transport the bunkers to the first tanker, nor would it be required to enter when returning from the bunkering voyage.

In the third example, a United States-flag coastwise-qualified tank barge proceeds from one United States port to a vessel in the Gulf of Mexico to which it delivers bunkers and then proceeds to another United States port where it takes on cargo. In this case, the tank barge is not subject to clearance at the first port, nor is it required to enter at the first port or any other port after delivering the bunkers. The Treasury Decision 85-91 amendments do not make the entrance and clearance requirements applicable to a vessel

107876

G1

transporting bunkers, or stores, supplies, spare parts, or crew members, to a vessel on the high seas, as specifically stated in the Notice of Proposed Rulemaking for the amendments and the Analysis of Comments in the Final Rule for the amendments.

In the fourth example, a United States-flag coastwise-qualified tank barge receives import cargo from a tanker at a point outside Customs territory (and thus, outside territorial waters) so that the tanker can proceed through the Southwest Pass at the Mississippi River. After the tanker has proceeded through the Pass, the tank barge, now in Customs territory, transships the cargo back to the tanker. The tanker proceeds to a United States port to unlade the cargo.

The Treasury Decision 85-91 amendments were intended to apply the vessel entrance and clearance requirements to vessels engaged in the transshipping or lightering of export or import cargo to or from another vessel on the high seas. The concern was that "import and export cargo of the U.S. [could] be transported in vessels not subject to statutory entry and clearance requirements upon arrival at or departure from the U.S." (See, Treasury Decision 85-91, under "Background.")

In the fourth example, the tank barge only temporarily lighters the tanker and the tanker proceeds to a United States port where it unlades its cargo, including the cargo which was temporarily lightered. All of the import cargo will be unladed from a vessel "subject to statutory entry and clearance requirements upon arrival at or departure from the U.S." Therefore, Treasury Decision 85-91 does not apply to the tank barge in this situation and the barge is not required to obtain clearance from Customs before temporarily lightering the tanker or to make vessel entry when arriving empty at a United States port after completing this operation.

We appreciate your communicating to us your concerns about the possible effects of the Treasury Decision 85-91 amendments. We hope that you will continue to keep us informed of any effects of the amendments on operations such as those of your company.

Sincerely,

Edward B. Gable, Jr.
Director, Carriers, Drawback
and Bonds Division

The Honorable
Ted Stevens
United States Senate
Washington, D. C. 20510

Dear Senator Stevens:

This is in reference to your correspondence of July 24, 1972, on behalf of [redacted], who is engaged in archaeological explorations in Alaska.

[redacted] is associated with the University of Berne, Switzerland. On arrival in Alaska he imported such things as surveying equipment, cameras, etc., temporarily free of duty under bond, apparently as professional equipment or tools of trade under item 864.50, Tariff Schedules of the United States. [redacted] will return to Switzerland this September, but he intends to return to Alaska in 1973. He is inquiring about what arrangement can be made concerning his equipment without violating the aforementioned provision of our tariff schedules.

Equipment of the type in question may be entered temporarily free of duty under bond for its subsequent exportation under item 864.50, Tariff Schedules of the United States, provided it is imported by or for nonresidents sojourning temporarily in the United States and for the use of such nonresidents. The period of the bond is 1 year which may, upon application, be extended for additional periods, which when added to the initial 1-year period, may not exceed a period of 3 years.

Since the foregoing provision permits the entry of merchandise thereunder only for the use of nonresidents, the equipment entered by [redacted] could not be used during his absence and the absence of the other nonresidents in his party. However, it appears that [redacted] could store the equipment in Alaska during his absence without violating the provisions of item 864.50 of the tariff schedules, so long as the bond period does not expire.

For Publication T.D 74-95-K

Dear Mr. Boyett:

200545

T.D. 51723-D, as amended by T.D. 54533-C, authorizing the allowance of drawback under the provisions of title 19, United States Code, section 1313(a), on, among other things, methyl violet 5RX and methyl violet 2RX, manufactured by Dye Specialties, Inc., Jersey City, New Jersey, with the use of imported magenta or fuchsin and methyl violet manufactured by the company under drawback regulations, is hereby further amended to cover methyl violet liquid DS-2988, methyl violet liquid DS-2517, methyl violet DS-1440 powder, methyl violet base, methyl violet base DS-1599, methyl violet oleate 2:1, methyl violet AB acid DS-1769, and malachite green liquid DS-2444, purified or stabilized, manufactured by the company under section 1313(b) with the use of methyl violet and malachite green.

There are enclosed, approved, copies of the manufacturer's supplemental drawback statements subscribed to on August 22 and December 13, 1973, requesting the foregoing action and containing the manufacturer's proposals as to the procedures it will follow and the records it will keep. Such records shall include those prescribed in section 22.5(a)(1) through (6) of the Customs Regulations.

The quantity of imported dyestuffs, of the required kind and quality, which may be designated as the basis for the allowance of drawback hereunder, shall not exceed a quantity thereof equivalent to the quantity of such merchandise of the same kind and quality as that designated which was used in the manufacture of the exported articles, as shown by an abstract of the manufacturing records which shall be filed with the drawback entry.

Drawback may be allowed hereunder, upon compliance with the law and regulations, on the articles covered hereby which are manufactured on and after January 5, 1970, and exported on and after February 13, 1970. Exportation shall be made within 5 years after importation of the imported merchandise.

G12

MAR 5 1974

WAR-6-R:CD:D LO
201581

Dear Mr. Martin:

This is in reply to your letter dated February 4, 1974, requesting our comments and suggestions on a problem that , is experiencing in the operations of their duty-free shops along the Canadian border.

In their letter of August 29, 1973, to the Regional Commissioner of Customs, Boston, Massachusetts, Ammex stated that at certain border crossing points the services of a full-time Customs officer had not been required. Instead, export and warehouse operations had been conducted under the overall supervision of the port director of Customs with exportations being supervised at the point of exportation by Customs officers. It is the instructions from the Regional Commissioner in Boston that full-time warehouse officers be assigned on a reimbursable basis to supervise the export operations that Ammex is questioning.

The authority for the establishment of the Customs bonded warehouses in question is set forth in sections 555, 557, and 562, Tariff Act of 1930, as amended, under the provisions of which imported merchandise may be stored or manipulated in Customs bonded warehouses, and exported therefrom without payment of import duties or taxes.

In this regard, section 555 provides, in part, as follows:

> * * * Except as otherwise provided in this chapter, bonded warehouses shall be used solely for the storage of imported merchandise and shall be placed in charge of a proper officer of the customs, who, together with the proprietor thereof, shall have joint custody of all merchandise stored in the warehouse; and all labor on the merchandise so stored shall be performed by the owner or proprietor of the warehouse, under supervision of the officer of the customs in charge of the same, at the expense of the owner or

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

A3

CLEARANCE Form 100 (5-72)

> proprietor. The compensation of such officer of the customs and other customs employees appointed to supervise the receipt of merchandise into any such warehouse and deliveries therefrom shall be reimbursed to the Government by the proprietor of such warehouse. (Underscoring supplied)

Analysis of this provision shows that the responsibility placed upon the U.S. Customs Service by the Congress goes beyond supervision of the premises and of the merchandise. The statute makes Customs one of the joint custodians of all merchandise placed in the warehouse. We mention this fact because if we were dealing here only with a question of supervision, we are aware that under the authority of section 1646a of title 19, supervision can be reduced to occasional verification of the merchandise in the warehouse.

In the circumstances involved, we can see no way in which Customs can remove a warehouse officer from the premises in question and at the same time fulfill its responsibilities under section 1555. This conclusion is reached even without considering the very pertinent fact that the type of warehouse involved here, the so-called duty-free store, has been and continues to be the subject of close scrutiny and sharp attack by several State agencies. The U.S. Customs Service and the Department of the Treasury have time after time emphasized in replies to Congressional and other inquiries that merchandise warehoused at border Customs bonded warehouses remains under Customs control at all times until it is exported to Mexico or Canada. Even if the law permitted it, any relaxation of our control over merchandise in these warehouses would be ill-timed and would in fact constitute a breach of trust with those who have received our reassurance as to the completeness of Customs control.

It should also be mentioned that two bonds supported by surety companies are involved in these transactions, namely, the Warehouse Entry Bond, Customs Form 7555, and the Proprietor's Warehouse Bond, Customs Form 3581. Any failure by Customs to insist on a strict adherence to the requirements of section 1555 would present to the surety a basis for defending against attempts to recover for a breach of either bond. That the surety companies are well aware of the scope of Customs control over bonded warehouses was brought to the attention of the U.S. Customs Service in a letter of

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

A4

201581

October 20, 1965, from the Surety Association of America regarding various recommendations for relaxing controls over Customs bonded warehouses, in which the Association stated:

> We should point out that the present low rates applicable to bonds filed by these warehouse proprietors are predicated on the tight supervision and controls now exercised by the Customs Bureau. If this recommendation is adopted, those rates would probably have to be revised because of the increased hazards and exposure which elimination of customs control and supervision would create. It should also be borne in mind that if this change is adopted many proprietors of Customs Bonded Warehouses may not be able to qualify for bonds on such basis.

We would also like to emphasize that Condition 4 of the Proprietor's Warehouse Bond, Customs Form 3581, filed by Ammex in order to obtain approval to operate a Customs bonded warehouse, provides:

> (4) And if said principal shall pay to the district director monthly the compensation of the customs officers and employees on duty at or assigned to such warehouse, including overtime compensation of customs officers and employees assigned to duty at night or on Sunday or a holiday pursuant to a request made by the above-bounden principal on behalf of the owner or consignee of any merchandise or baggage; and, upon the demand of said district director, shall pay any and all such other amount or amounts as may be found to be legally due and payable to the United States

In summary, there is no authority to remove Customs warehouse officers from duty-free stores. The temporary removal of such officers from some stores was not approved by Customs Headquarters, and the recent action of restoring the required supervision now conforms operations at the stores with Customs policy as applied elsewhere in the United States.

We would like to bring to your attention that Customs and Treasury Department policy favors the limitation of the scope of operation of duty-free shops exclusively to airports and seaports. Further,

the Department has advocated the restriction of the sales from these facilities to travelers "departing from the United States on a vessel or aircraft." This is amply demonstrated in Department comments to S-2144 and H.R. 10532 (92nd Congress), and S-144 (93rd Congress).

[redacted]

Dear [redacted]

This is in reply to your letter dated December 2, 1974, concerning the designation of fungible merchandise under section 22.5(a)(2) of the Customs Regulations. You mention a situation in which a manufacturer commingles imported and domestic merchandise of a fungible nature in a tank, and then withdraws merchandise from the tank both for use by himself in manufacturing and for sales to others.

You refer to the following specific situation. A tank contains 5,000 gallons of domestic merchandise, and 5,000 gallons of imported merchandise is added to it. Next 5,000 gallons is withdrawn, presumably for sales. The remaining 5,000 gallons is withdrawn in 1,000 gallon increments, alternating between use and sale.

In such a situation we do not see how the manufacturer can meet the obligation of establishing that any part of the imported material was in fact used in manufacture by him. He could only show that he did use 3,000 gallons in manufacture, but since that quantity could have come from the domestic material in the tank, he would fall short of establishing the use of any imported material.

If the first 5,000 gallons which was withdrawn had been for use in manufacturing, there would be a total of 8,000 gallons withdrawn for use. In such a situation 3,000 gallons of the imported merchandise would be considered to have been used in manufacturing and could be designated for drawback purposes.

Sincerely yours,

206080

Dear

This is in reply to your letter of March 9, 1976, wherein you asked for our opinion regarding certain questions arising from the fact situation detailed in the next paragraph.

You have enclosed bills of lading from which indicate that the articles (gear frame assemblies) are being consigned to the for shipment to is listed as the shipper. Submitted invoices indicate that the articles are shipped to and are being sold to is listed as the shipper.

You ask three specific questions as follows:

1. If we get an authorization letter from showing that the drawback rights have been retained as required in section 22.21 (a), can we claim drawback on these exports?

2. We would like to use the date on the Bill of Lading as the date of export even though the items will be shipped from the Pool Car installation within three to five days. If we cannot use this Bill of Lading date, what date should be used?

3. I assume that we would have to put on the drawback claim "Exported by since our Bill of Lading will show as the company shipping the material. Would you please clarify this fact if should not be considered the exporter.

A9

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

In answer to your first question, by "we" this office assumes you refer to your client, for which your firm will collect drawback. as the manufacturer or producer, may retain the right to claim the drawback upon production of satisfactory evidence that such right has been retained, as set out in section 22.21(a), Customs Regulations. If a letter or other paper to that effect is obtained from the exporter, then your firm may continue to collect drawback for as its agent.

In answer to your second question, the date on the bill of lading may not be used as the date of export unless that date is in fact the correct date of export. The date which should be used as the date of export is the date on which the articles were actually exported.

In regard to your final question, since is not the exporter, but the shipper to the exporter cannot be shown on the bills of lading or the drawback claims as the exporter. However may claim drawback upon proof of assignment to it of the drawback rights of the exporting company. The claim should note that is the exporter with right to claim drawback being retained by Proof of this right should be filed at each port where drawback will be claimed.

Sincerely yours,

Regional Director, Inspection and Control Division, Region III

Director, Carriers, Drawback and Bonds Division R:CD

Request for Internal Advice, Bulk Distilled Spirits, Class 6

This is in response to your memorandum of March 17, 1977, on the above referenced subject.

In your correspondence you indicated that you have a request from a warehouse proprietor who wished to transfer a quantity of over-proof bulk spirits from Class 2 storage to Class 6 where it will be reduced in proof and bottled. You further state the proprietor then wished to withdraw the bottled spirits for transfer to duty-free shops at the border or airports in the hope of sales to persons departing the United States. The proprietor further desires the option and flexibility to transfer the merchandise to other duty-free shops in the event sales are not successful.

You opined that this activity does not constitute the direct shipment and exportation or transportation and immediate exportation as required in connection with Class 6 merchandise under section 19.15 of the Customs Regulations.

You have propounded five questions based on the foregoing situation for our consideration. First, you ask if the proprietor's request can be approved. Next you want to know if it makes any difference if title (ownership) to the merchandise is transferred. Your third question is whether the proprietor could transfer the Class 6 goods to ship's chandlers who deal exclusively in sales to vessels or aircraft as "supplies". In this case you indicate withdrawals would be effected under section 309 of the Tariff Act of 1930. Fourthly, you ask if the answer to the third question is in the affirmative would the warehouse proprietor at the port of origin be responsible for assuring compliance

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

A11

with section 19.15(g)(1) of the Customs Regulations relating to modification of the Warehouse Entry Bond; CF 7555, recital clause and the insertion of the new condition on the bond at the destination. Lastly, you want to know if merchandise unsold by ship's chandlers could be transferred back to the Class 6 warehouse.

The answer to your first question relating to whether the proprietor's request may be approved must be answered in two parts. Initially, we must consider the question of whether the transfer to the duty-free shop is permissible and next whether a subsequent transfer to other duty-free shops is permissible.

Under the authority of section 311, Tariff Act of 1930 and section 19.15(g)(1) of the Customs Regulations, articles manufactured may be withdrawn from the manufacturing warehouse for transportation and delivery into any bonded warehouse at an exterior port for the sole purpose of immediate export therefrom. As you know "duty-free stores" are Customs bonded warehouses established under the authority of sections 555, 557, and 562, Tariff Act of 1930. Therefore, under statutory and regulatory authority manufactured articles from a Class 6 warehouse may be transferred to duty-free stores if it is for the sole purpose of immediate export therefrom. Headquarters in construing the immediate exportation requirement has not placed any time limits within which such merchandise must be exported but has looked to the intention of the parties at the time of the transfer. Accordingly, if merchandise is transferred to the duty-free shop with the intention of selling the merchandise to persons departing the United States, Headquarters has authorized such a transfer irrespective of when the actual exportation does in fact occur.

The question of whether merchandise may be transferred from one bonded warehouse to another was considered by Headquarters in CIE 947/65. Therein it was indicated that merchandise manufactured in a Class 6 bonded manufacturing warehouse and withdrawn therefrom for rewarehousing at an exterior port may not be subsequently withdrawn from the storage warehouse at that port for any purpose other than exportation in accordance with section 311 or 309(a), Tariff Act of 1930, as amended.

In your second question you ask whether it makes any difference if title (ownership) to the merchandise is transferred. Our answer to your first question is not in any manner affected by who owns the merchandise.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

A12

207584

The next question for our consideration is whether the proprietor could transfer the Class 6 merchandise to ships chandlers instead of duty-free shops. As you indicated, such withdrawals would be made pursuant to section 309 of the Tariff Act which provides for withdrawal of supplies for certain vessels and aircraft. The transfer of Class 6 merchandise to ship's chandlers would be no different from a transfer to a duty-free shop. As with duty-free shops merchandise transferred to a ship's chandler could not thereafter be transferred for any purpose other than exportation.

Next you inquire whether the warehouse proprietor at the port of origin would be responsible for complying with the requirements of section 19.15(g)(1) relating to modification of the recital clause and the insertion of the new condition on the bond at destination. Under the provisions of section 19.15(g)(1) a rewarehouse entry shall be made at the exterior port in accordance with section 144.34(b) supported by a bond on Customs Form 7555. Section 144.34(b) indicates that merchandise may be transferred to a warehouse by withdrawing it for transportation and entering it for rewarehouse in accordance with section 144.41 upon arrival at destination. That provision states that such merchandise may be entered for rewarehouse by the consignee named in the withdrawal. Accordingly, the consignee or such other individual who makes entry, which may or may not be the warehouse proprietor at the port of origin, would be responsible for complying with the requirements of section 19.15(g)(1).

In answer to your final question regarding whether merchandise may be transferred back to the Class 6 warehouse if sales were not consummated by ship's chandlers, Headquarters has consistently held that when merchandise has been transferred into any bonded warehouse at an exterior port for the purpose of immediate export therefrom it may not thereafter be transferred back to the Class 6 warehouse.

Gentlemen:

You ask in the above-referenced letter whether drawback would be payable upon the exportation of Aircraft manufactured by your client, pursuant to 19 U.S.C. 1313(g), or, alternatively, 19 U.S.C. 1313(a).

You state that had previously contracted with (hereinafter referred to as for the manufacture and sale of three Aircraft for domestic service. Upon completion of the aircraft, delivery was refused by and another purchaser was sought. You state that an agreement thereafter was entered into between and the (hereinafter referred to as Inasmuch as requirements for the aircrafts' configuration, technical specification and performance were entirely different than those specified by the domestic buyer, the aircraft were extensively altered at a cost of approximately $2 million and 3,000 man hours per aircraft. You state that one of the three aircraft, serial number 1120, upon delivery to in the United States is scheduled to leave on a revenue flight in the very near future.

You ask whether section 313(g) of the Tariff Act of 1930, as amended (19 U.S.C. 1313(g)), applies under the facts presented. Alternatively, you ask in the event that Headquarters concludes that section 1313(g) does not apply, whether the entry of the subject aircraft into the commerce of Germany as an article of merchandise upon the conclusion of its initial revenue flight from the United States will so qualify the aircraft as being considered exported within the meaning of section 313(a) of the Tariff Act of 1930, as amended (19 U.S.C. 1313(a)).

In this regard, 19 U.S.C. 1313(g) provides as follows:

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

A14

207669

> The provisions of this section shall apply to materials imported and used in the construction and equipment of vessels built for foreign account and ownership, or for the government of any foreign country, notwithstanding that such vessels may not within the strict meaning of the term be articles exported.

We have carefully studied the document submitted with your request setting out in great detail the extent of the work performed on the aircraft for the German buyer, We find the work performed on the aircraft to be extensive but cannot conclude that the aircraft were "built for foreign account and ownership" within the meaning of the above quoted statute. Instead, we find that the aircraft were built and completed for the domestic buyer and subsequently altered to the specifications of We find it particularly relevant that the aircraft were complete and airworthy at the time delivery was refused by

Inasmuch as the record discloses that the aircraft were manufactured in the United States by with the use of certain imported merchandise, drawback would be payable upon exportation of the aircraft pursuant to 19 U.S.C. 1313(a), provided all pertinent regulations and the law are complied with. In this regard, section 1313(a) provides in relevant part as follows:

> Upon the exportation of articles manufactured or produced in the United States with the use of imported merchandise, the full amount of the duties paid upon the merchandise so used shall be refunded as drawback, less 1 per centum . . .

Headquarters, U. S. Customs Service, has consistently held that departure of aircraft in international traffic, that is, carrying paying passengers and cargo, will not satisfy the requirement of section 1313(a) that the aircraft be exported in order to qualify for payment of drawback. As you know, the Courts have defined an exportation for purposes of the Customs Law as a severance of goods from the mass of things belonging to this country with the intention of uniting them to the mass of things belonging to some foreign country. In our opinion, that an intention may exist to enter the aircraft into the commerce of a foreign country subsequent to its departing flight in international traffic would not so qualify it as exported for purposes of 19 U.S.C. 1313(a).

Re: Protest No. 0712-0-000113, your file PRO-2-0:CV:00 GAM, x37-5

Dear Sir:

213476

The protestant contends that temporary housing units are entitled to entry under item 864.50, Tariff Schedules of the United States (TSUS). That provision lists the types of articles that may be temporarily imported and then states "all the foregoing imported by or for nonresidents sojourning temporarily in the United States and for the use of such nonresidents." It is clear that entitlement to the provision depends on the importer meeting three independent requirements: (1) the articles must fall within the listed types, (2) the entry must be made by or for a nonresident, and (3) the article is for the entering nonresident's use. Failure to establish all three points is fatal to establishing entitlement to the provision.

The protestant states that the articles were for the use of the [redacted] Only one Customs entry was presented for review (80-357382-8 dated November 19, 1979). Consequently, our views are limited to the facts presented in that entry. The importer is shown to be a nonresident corporation on the entry. The original provision, paragraph 9 of section 308, Tariff Act of 1930, as amended, allowed temporary importation of "Professional equipment, tools of trade, and camping equipment imported for their own use by nonresidents sojourning temporarily in the United States,"... Act of June 26, 1938, sec. 4 Pub. L. 75-721, 52 Stat. 1079 (emphasis added). After adoption of the Tariff Schedules in 1962 (19 U.S.C. 1202), the provision was designated as item 864.50, TSUS, without change. That provision was amended to its present form by Act of October 24, 1968, Pub. L. 90-635, 82 Stat. 1351. That statute added Headnote 1 for Part 5c, Schedule 8, TSUS, which required that entry under item 864.50, TSUS, must be made by the nonresident importing the articles or by an organization represented by the nonresident. It is clear that the word "nonresident" in the statute refers to an individual rather than a corporation. See also S. Rpt. 1618, 90th. Cong. (Oct. 8, 1968).

There is no evidence to show that the importation was made by the corporate importer for use of a nonresident individual. Instead, the evidence indicates that the merchandise was imported for the use of the [redacted] presumably neither a nonresident nor an individual.

B3

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

Accordingly, the available evidence shows no entitlement to entry under item 864.50, TSUS, as contended by the protestant. Therefore, the protest is to be denied in full.

Sincerely,

George C. Steuart

Dear Mr.

Re: Your letter of August 13, 1982, concerning permits for "duty-free stores"

Your letter encloses a copy of an article from a publication called "International Tax-Free Trader." The article states that the United States Department of the Treasury issues "permits" to open "duty-free stores" in any city in the United States with an international airport.

What are referred to as "duty-free stores" are Customs bonded warehouses which are established under the provisions 19 U.S.C. 1555, 1557, and 1562. Under these provisions, imported merchandise may be stored or manipulated in bonded warehouses and exported without payment of import taxes or duties.

No "permit" is issued to operate a bonded warehouse. The owner or lessee of a warehouse makes written application to the district director of Customs at the place where the warehouse is located to establish a bonded warehouse.

The procedures relating to the establishment and operation of Customs bonded warehouses are found in Part 19 of the Customs Regulations (19 CFR Part 19). These regulations were extensively amended, effective December 1, 1982, and current requirements to establish a bonded warehouse were published in the Federal Register on November 1, 1982 (47 FR 49355). The amended regulations may also be found in Treasury Decision 82-204, published in the "Customs Bulletin" on November 10, 1982.

In addition to the statutory and regulatory requirements which must be observed by all bonded warehouse operators, warehouses operated as "duty-free stores" must also comply with certain operational requirements, designed primarily to insure exportation of the merchandise withdrawn. As these requirements

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

BS

vary somewhat depending upon the type of operation involved, we suggest that you contact the office of the District Director of Customs in Honolulu (808-546-3115) for specific information. That office will also be able to advise you of current requirements to establish a bonded warehouse.

Sincerely,

George C. Steuart

NOV 22 1982

WAR-1-CO:R:CD:D
215257 L

Dear Sir:

Re: Your letter of October 26, 1982, reference WAR-1-O:IC:OO 3M

You ask for the procedure and documentation necessary to accomplish a multi-district warehouse operation change of ownership.

It is not clear from the correspondence how the change of ownership will take place. Neither do we know whether the currently existing warehouse proprietor's bonds show the parent, or the subsidiary, as principal. We assume is the principal on the bonds and the operator of the warehouses.

If the change in ownership is the result of the sale of the stock of the corporation to a new owner or owners, but the corporation will survive and continue to operate the bonded warehouses, no action is necessary so far as the bonds are concerned since the corporation continues to exist as the same legal entity.

As you are aware, the Customs Regulations relating to the establishment of Customs bonded warehouses have been amended. A copy of the final rule, published in the Federal Register on November 1, 1982 (47 F.R. 49355), is enclosed. While not related to the change of ownership in this case, new warehouse bonds will be required for all bonded warehouses on December 1, 1982.

If is to be dissolved as a result of the sale or if the assets of are being sold to a new owner, whether a corporation, partnership, or individual, that is a different legal entity, it will be necessary, of course, for the present owner to discontinue the warehouses and for the new owner to apply to the appropriate district directors to establish new bonded warehouses. New regulations concerning application to establish a bonded warehouse (section 19.2, Customs Regulations), will be found on page 49368 of the enclosed Federal Register. Note, however, that section 19.2 is not effective until December 1, 1982, although fees required by section 19.5 became effective on November 1, 1982.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

87

Note further that while present section 19.2(a) permits all storage warehouses operated by one proprietor in one district to be included in one bond, this will not be allowed after November 30, 1982, except in the case of Class 7 warehouses (see Part 113 - Comment, 47 F.R. 49365).

Sincerely,

George C. Steuart

ISSUE:

Pursuant to section 22.13, Customs Regulations, who is the exporter, the air freight forwarder which consolidates small shipments for export, or the individual companies whose shipments are parts of the consolidated exported shipments?

FACTS:

An air freight consolidater of smaller shipments issues air waybills to the individual companies whose shipments it consolidates for exportation. The exporting carrier issues a waybill listing the consolidater as the shipper. The consolidater's waybill issued to each individual company notes the latter as the shipper and the consolidater as the shipper's agent. A Customs field office has asked which is the exporter for purposes of section 22.13, Customs Regulations, the consolidater or the individual companies.

LAW AND ANALYSIS:

The operative language of section 22.13 of the regulations refers not to "exporter" but to "shipped by the person," and "person in whose name the merchandise was shipped," as follows:

> The certified or uncertified notice of exportation shall show that the merchandise was shipped by the person making the drawback entry, or shall bear an endorsement of the person in whose name the merchandise was shipped, showing that the person making entry is authorized to make it and receive the drawback. Emphasis added.

The language is as set out to distinguish between the exporting carrier of the goods, who has no interest or ownership of the goods, and the person or entity having an interest in or ownership of the goods who causes them to be shipped or exported. The Customs Court and Court of Customs and Patent Appeals have always held that "shipper" is construed not to include one having no more interest in or knowledge of the merchandise than merely that involved in the physical function of placing together, packing, and starting the same in transit. See Louis Rosenfield v. United States, 18 CCPA 146, T.D. 44361, (1930).

B9

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

The sample waybill submitted with the file, wherein the consolidater is noted as the shipper's agent and the individual company is noted as the shipper, is correctly prepared to show the true state of facts. The individual companies having interest in the merchandise and causing that merchandise to be exported are the "persons" referred to in section 22.13, C.R. The consolidater is an agent of these companies.

HOLDING:

In this case, the individual companies are the "exporters" or "shippers" contemplated by section 22.13, Customs Regulations.

DRA-1-CO:R:CD:D
216139 K

216139

Assistant District Director
Classification and Value Division
Baltimore, Maryland 21202

Dear Sir:

Re: Drawback Entry 83-100446 and your memorandums dated April 7 and July 29, 1983

Notices of Exportations, Customs Forms numbered 7511, filed with the above-referenced drawback entry named a domestic manufacturer as the exporter for some shipments while other shipments named a foreign corporation as the exporter without endorsements on the notices to waive drawback rights in favor of the domestic manufacturer. At the request of your office, the domestic manufacturer obtained a document signed by a member of the board of directors of the foreign corporation in an attempt to obtain a power of attorney to waive drawback rights in favor of the domestic manufacturer. We agree with your view that the documents submitted are not in compliance with the requirements of section 141.37 of the Customs Regulations to authorize a power of attorney by a nonresident corporation. Thereafter, the domestic manufacturer indicated that the foreign corporation filed for bankruptcy in Switzerland during 1982 and the domestic manufacturer is unable to obtain further documentation. You are concerned with Customs Service Decision (C.S.D.) 83-13 relating to bankruptcy in the event drawback is paid to the domestic manufacturer and requested advice.

Section 22.21(b) of the Customs Regulations in conjunction with section 22.45 (new regulations, sections 191.73(b) and 191.6, effective December 12, 1983), require that when the manufacturer or the exporter who is entitled to drawback wants to assign the payment to a third person (someone other than the manufacturer or exporter) the assignment must be in writing and in the case of a corporation, an officer of the corporation or one with a power of attorney in compliance with sections 141.31 through 141.46 of the regulations must sign the document authorizing payment to another person (other than to the manufacturer or exporter). The facts presented concern whether payment should be made to the manufacturer or the exporter, not to another person. Therefore, the assignment need not be in writing. For this reason, we have avoided an unnecessary discussion of the complex facts concerning the power of attorney.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B11

Section 22.21(a) (191.73(a)) of the regulations is controlling in this case. The regulation provides that the person named as the exporter on the notice of exportation is entitled to drawback unless the manufacturer on the sale or assignment of the articles reserved to himself the right of drawback upon satisfactory evidence that such reservation was made with the knowledge and consent of the exporter. We are of the opinion that there is evidence in the record (we do not have a copy of your file and the entry documentation) to find that the domestic manufacturer reserved the right to drawback for the following reasons:

1. The domestic manufacturer, incorporated under the laws of the State of Delaware, did not provide the foreign corporation with a certificate of delivery and manufacture necessary for the foreign corporation to complete a drawback entry.

2. The domestic manufacturer had possession of the notices of exportations required as evidence to prove that articles were exported for drawback. The foreign corporation could not complete a drawback entry without the notices.

3. The ineffective power of attorney signed by a member of the board of directors of the foreign corporation is some evidence of an attempt to assign the right to drawback to the domestic manufacturer.

4. The domestic manufacturer's proposed drawback contract was subscribed to on June 17, 1980. In response to an oral request for information, the drawback applicant submitted a letter dated July 3, 1980, containing a statement that the applicant "would receive full benefit of drawback not our customers." The drawback proposal with the letter of July 3, was approved by your office on July 17, 1980.

C.S.D. 83-10 concerned the rights, if any, of a broker to file drawback claims and receive monies for a bankrupt claimant. It did not concern the rights of drawback between a manufacturer of articles and an exporter of articles. A proper finding that the manufacturer is entitled to drawback in the facts presented negates any applicability of C.S.D. 83-10.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B12

The attorney representing the domestic manufacturer indicated on November 1, 1983, that he would further research the records such as contracts between the parties for evidence to satisfy section 22.21(a) of the regulations. It is our understanding that an audit will be performed to verify the drawback claim. The regulatory auditor may acquire further evidence to show that drawback was reserved to the domestic manufacturer with the knowledge and consent of the exporter of record.

Finally, it is our understanding that the articles covered by the drawback entry were exported in January of 1981. As a practical matter, the entry will not be liquidated with payment to the domestic manufacturer until after January of 1984. Note that section 22.13 of the regulations (191.62) requires that a drawback entry and a certificate of manufacture shall be filed within 3 years after the date the articles are exported. Upon expiration of the time limitation, the foreign corporation would be precluded from the benefit of drawback.

A copy of this letter may be furnished to the claimant and/or his representative.

Sincerely,

George C. Steuart

AND DATE

DEPARTMENT OF THE TREASURY U.S. CUSTOMS SERVICE CORRESPONDENCE APPROVAL AND CLEARANCE

UNITED STATES GOVERNMENT

Memorandum

DEPARTMENT OF THE TREASURY
UNITED STATES CUSTOMS SERVICE

DATE: 30 AUG 1984

FILE: CON-9-CO:R:CD:D
217259 L

TO : Director, Carriers, Drawback and Bonds Division

FROM : Chief, Drawback and Bonds Branch

SUBJECT : Treatment of Cargo Handling Apparatus; Proposed Response of Carrier Rulings Branch to District Director, Portland, Oregon

217259

You ask what procedures apply to the transportation of foreign stevedoring equipment from Blaine to Portland to be used in unloading vessels in Portland, whether a V.S.T. & E (vessel supply transportation and exportation entry) or V.S.I.E. (vessel supply immediate exportation entry) is allowed, and whether a T.I.B or other procedure could be used.

The proposed response and background material indicate that the stevedoring equipment in issue is not vessel equipment and we assume that is the case.

Section 309(a), Tariff Act of 1930, as amended, provides for the withdrawal from continuous customs custody elsewhere than in a bonded warehouse or foreign trade zone of certain equipment for vessels free of duty and tax. The Customs Regulations, in sections 10.59 et seq. and 18.20 et seq. generally cover such situations and, for qualifying equipment, a V.S.I.E. or V.S.T. & E. entry would be appropriate when the equipment is to be exported directly or indirectly. As this equipment is not qualified vessel equipment a V.S.I.E. or V.S.T. & E. cannot be used.

The stevedoring equipment here is cargo and must be entered at Blaine either for consumption or immediate transportation (I.T.) to Portland. Upon arrival at Portland, the port of destination, some form of entry (see section 18.12, Customs Regulations) must be made.

Temporary importation under bond under item 864.50, TSUS (professional equipment) might be available if the equipment is entered by a nonresident operator or supervisor and if the equipment is used only by or under the supervision of the nonresident.

B14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

We are aware of no other provision of law under which this equipment could be brought into the United States and used as described without entry and payment of duty.

DEPARTMENT OF THE TREASURY

U.S. CUSTOMS SERVICE

WASHINGTON

JUL 19 1985

REFER TO
DRA-1-CO:R:CD:D
217850 RB

Issue: While in a foreign-trade zone exempt from the payment of duty, does privileged foreign or nonprivileged foreign merchandise thereby constitute duty-free merchandise within the meaning of the substitution manufacturing drawback law, 19 U.S.C. 1313(b), so that an article manufactured therefrom, and then exported, may be the subject of a claim for drawback under section 1313(b)?

Facts: Prior to activation of its foreign-trade subzone, A, a motor vehicle manufacturer, imported transmissions, duty-paid, and used them in the manufacture of motor vehicles which were thereafter sold for domestic consumption. Following activation of its subzone, A admitted transmissions thereto in privileged foreign and nonprivileged foreign statuses, and then used them in the manufacture of motor vehicles which were exported. Accordingly, no duty was paid upon these latter transmissions. A claimed drawback under 19 U.S.C. 1313(b) on the exported vehicles manufactured with the use of the privileged foreign and nonprivileged foreign transmissions, and designated for drawback the duty-paid transmissions used prior to activation of the subzone.

Furthermore, A similarly claimed drawback under 19 U.S.C. 1313(b) on additional exported vehicles, a significant portion of which had been manufactured with the use of privileged foreign and nonprivileged foreign parts, and, in so doing, A designated for drawback shipments of "identical" parts which had, from time to time, been previously imported, duty-paid, and admitted to the subzone in privileged domestic status, and there used in the manufacture of other vehicles which were entered for domestic consumption.

It is presumed herein that the remaining statutory and regulatory requirements applicable to section 1313(b), as to same kind and quality, time limits, etc., were properly satisfied.

Law and Analysis: The provisions of 19 U.S.C. 1313(b) provide in pertinent part for the allowance of drawback on exported articles manufactured with the use of duty-paid, duty-free, or domestic merchandise.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

C2

Foreign merchandise in a zone pursuant to the Foreign-Trade Zones Act of 1934 (FTZA), as amended, 19 U.S.C. 81a-u, is, except as otherwise provided therein, exempt from the Customs laws of the United States affecting imported merchandise (19 U.S.C. 81c). This, of course, means, inter alia, that, while in a zone pursuant to the FTZA, such merchandise is exempt from the payment of duty.

> "[A foreign-trade zone]...differs from adjacent territory in being exempt from the Customs laws as affecting goods destined for reexport. It means simply that, as regards Customs duties, there is freedom unless and until imported goods enter the domestic market" (emphasis added) (FOREIGN TRADE ZONES, REPORT OF A SUBCOMMITTEE of the COMMITTEE ON WAYS AND MEANS on H.R. 3657 and H.R. 9322 (later enacted as the FTZA) (House Committee Print), 73d Cong., 2d Sess., at 1).

Foreign merchandise in a zone under such circumstances is thus conditionally free, and is not duty-free merchandise within the purport of section 1313(b). Compare in this connection ORR Ruling 74-0216, which held that merchandise imported temporarily free of duty under bond (TIB) in accordance with the provisions of Subpart 5C, Schedule 8, Tariff Schedules of the United States, was likewise conditionally free, and not duty-free merchandise within the meaning of section 1313(b).

Holding: While in a foreign-trade zone exempt from the payment of duty, privileged foreign or nonprivileged foreign merchandise does not thereby constitute duty-free merchandise within the meaning of the substitution manufacturing drawback law, 19 U.S.C. 1313(b), and, hence, an article manufactured therefrom, and then exported, may not be the subject of a claim for drawback under section 1313(b).

[redacted]

Dear [redacted]

In response to your letter dated June 25, 1985, there is enclosed a copy of our letter to the District Director of Customs, Anchorage, Alaska, concerning the entry of drilling equipment under item 864.50, Tariff Schedules of the United States.

We would like to point out, however, that if the barge were to become frozen into the ice and [redacted] were to return to The Netherlands over the winter, there would be a breach of the entry bond.

Sincerely,

George C. Steuart

218069 MM

District Director of Customs
620 East 10th Avenue
Anchorage, Alaska 99501

Dear Sir:

This is in response to a letter dated June 25, 1985 (copy enclosed) from [redacted] concerning entry of digging equipment under item 864.50, Tariff Schedules of the United States. [redacted] indicates that your office is doubtful entry could be made under this item and suggested that he contact this office for guidance.

The information submitted states that foreign-manufactured digging equipment would be entered at Anchorage, Alaska and assembled temporarily on board a U.S.-built barge to perform an underwater digging operation on the Outer Continental Shelf off the North Slope of Alaska. The operation is to take place during the relatively brief ice-free summer season. Upon completion the equipment will be removed, disassembled and exported. It is further stated that a [redacted] a nonresident will have continuous responsibility for and control over the equipment while it is in the United States.

Based on the facts presented, it would appear the equipment could be allowed entry under item 864.50, TSUS, provided there is compliance with the applicable statute and regulations.

Sincerely,

George C. Steuart
Chief
Drawback and Bonds Branch

ISSUES:

Is crude degummed soybean oil (CDSBO) fungible for purposes of the same condition substitution drawback law 19 U.S.C. 1313(j)(3) under the facts set out below?

Under the following fact situations, is possession of the CDSBO sufficient pursuant to C.S.D. 85-34 to support drawback under the same law?

FACTS:

A corporation is apparently a commodities dealer and an importer and exporter of CDSBO, which is stated to be internationally traded and that no matter where produced, is "basically" (the corporation's term) the same. The corporation, through counsel, further states that there are no recognized differences in grade or type, and that a shipment of CDSBO from any country is considered within the industry to be a good delivery, unless, according to the corporation, "a particular country of origin is specified in the contract." Even then, there is "generally" no difference in grade, merely a "preference" of a product from a particular country, as is the case with United States CDSBO because financing for the purchase of the product is dependent on the country of origin.

As to the question of possession, the following fact situations are proposed:

1. The corporation purchases CDSBO f.o.b. a vessel at a South American or European port. The CDSBO is then transported in that vessel to the United States, and the corporation imports it, pays duty on it, and stores it in a tank owned or leased by it. The corporation then sells the commodity to another entity in the U.S. for refining, and does not furnish a Certificate of Delivery (CF 7543) or otherwise transfer any drawback rights attendant to the imported CDSBO.

The corporation then purchases the same amount of U.S. CDSBO located somewhere in this country, and has it transported to the same port where importation of the aforementioned CDSBO occurred, placing the domestic CDSBO in tanks owned or leased by it. The domestic CDSBO is then sold c.i.f. or f.a.s. (free alongside vessel) at a foreign port. The corporation then timely (i.e., within 3 years of the date of importation of the foreign CDSBO) exports the domestic commodity.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

C6

2. Same as (1), except the corporation purchases the foreign origin CDSBO at the port of importation but does not act as importer of record.

3. Same as (1), except the corporation purchases the foreign CDSBO which has already been imported and placed in a Customs bonded tank. The corporation then makes entry for the CDSBO and pays all duties.

4. Same as (1), except the corporation sells the CDSBO while on the high seas before entry, and although acting as importer of record, does not place the CDSBO in its tanks, but instructs the shipping company to transport the CDSBO directly to the purchaser in the U.S.

5. Same as (1), except the corporation purchases the CDSBO on c.& f. or c.i.f. U.S. port terms, acts as importer or record, pays the duties, but transfers the merchandise immediately to a purchaser at the port of entry. This is a combination of variants (2) and (4), but the corporation does not state at what time the sale was made. We believe based on our discussion below that the time of sale in this variant (5) is irrelevant.

6. Same as (1), except exportation occurs at a port other than that of importation.

7. Same as (1), except the exported shipment is sold f.o.b. vessel at the U.S. port.

8. Same as (1), except the corporation purchases the CDSBO to be exported in tanks or tank cars at the port of exportation, then sells it c.& f. foreign port, and has the commodity loaded directly onto a vessel bound for that foreign port.

9. Same as (1) with the (5) variant, then proceeds with the (8) variant.

10. Same as (9), except exportation occurs at a port other than the port of exportation.

The corporation, as represented by counsel, believes each of the above situations will support a valid claim for drawback under 19 U.S.C. 1313(j)(3).

001818

LAW AND ANALYSIS:

1. The law, enacted as 19 U.S.C. 1313(j)(3) and which is in the process of being corrected to 19 U.S.C. 1313(j)(2), allows for the substitution of domestic or other imported merchandise provided at the time of exportation (or destruction) the substituted merchandse is fungible (i.e., commercially identical, (see 19 CFR 91.2(k)(1)) with the imported and is in the same condition as was the imported at the time of its importation.

Counsel states there are no recognized differences in grade or type of soybean oil. This type oil and other types of vegetable oil are bought and sold under the rules of the National Cottonseed Products Association. Rule 102, Section 1, of the NCPA rules deals with the standard of quality of crude soybean oil. The types of crude soybean oil are set out in section 1(A)(1-7) of that rule. Crude soybean oil must meet standards of color, free fatty acid limits, moisture and volatile contents and other standards. Crude degummed soybean oil can contain no more than 0.03 percent phosphorous as determined by A.O.C.S. tentative method Ga 1-53. The best method to prove fungibility of agricultural commodites is to obtain chemical analyses of the designated and substituted materials.

We will assume that all CDSBO in question is just that, per the standards of Rule 102, for purposes of this ruling.

The commercial world consists of buyers, sellers, comminglers, government agencies, and others. If these groups treat articles or merchandise as fungible or commercially identical, the articles or merchandise are fungible. Whether these groups treat the articles or merchandise as fungible is a question of fact, not law. Generally, fungible merchandise is identified by records, rather than physical properties. When two or more units of apparently identical properties are treated differently by the commercial world for any reason, then they are not fungible.

Words and phrases such as "generally no difference", "preference for product," (over another), "basically the same," etc. are anathema to the concept of fungibility. Counsel in this case states there is "generally no difference of grade, merely a preference for product from a particular country ..." This is an admission that the CDSBO in the instant case is probably not fungible.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

001818

C8

The commercial world treats articles as different and not fungible for several reasons. The articles may be physically different, an obvious case, or they may have different origins, history, or association values. An example of the latter cases would be an original Roman coin and its reproduced twin. These would not be fungible because of the respective histories and associations attached to the genuine article and the reproduction. So, too, if the commercial world for snobbish, sentimental, or financial reasons values an article made in one country more than the identical article made in another, the two articles are not fungible. Parenthetically, we add here that more than once in the many telephonic conversations between staff lawyers and soybean trading sector representatives, unsolicited comments were made by the latter that United States CDSBO is more highly sought than, for example, Brazilian.

2. Despite the apparent nonfungibility of the various CDSBO's in this case, we will rule on the possession aspects of the various situations set out by counsel because we were asked to do so.

"Possession" for purposes of the same condition drawback law means just that. It means complete control over the articles or merchandise on premises or locations where the possessor can put the articles or merchandise to any use chosen. It does not mean that by trading commercial paper, e.g., purchase orders or bills of lading, between brokers or others in a commodity while that commodity wends its way across America by train or truck, possession is somehow created. Transactions made in order to create a climate for drawback, or stated another way, ersatz transactions made to resemble bona fide transactions, will not support drawback. See C.S.D.'s 81-76 and 81-218. To hold that for purposes of same condition drawback arbitragers and futures dealers in commodities have "possession" of these commodities because of the purchase of commercial paper and temporary storage in leased bins or tanks, would not further the intent of the Congress or the fundamental purpose of the drawback law.

This is not to say any or all the proposed situations set forth by counsel are not bona fides. It is to say that transactions and sales of commodities will be and should be carefully scrutinized by Customs, because many bona fide sales transactions in commodities do not create possession. The question is: Does the legal person possess paper or the commodity itself?

The port of exportation need not be the port of importation for any type of drawback; therefore, this aspect of the situations will not be further discussed. The corporation in none of the cases has possession under C.S.D. 85-34 of both the imported and

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

C9

domestic oil. That ruling requires that the designated and substituted merchandise must have been in the possession of a single entity during a period beginning on the date of importation and ending on the date of exportation, such period not to exceed three years. Certainly, the purchase of CDSBO located in tanks or tank cars at a port of exportation just prior to exportation of the oil is not possession of that oil. Just as certainly, sale of oil purchased on the high seas and shipped immediately upon arrival to another purchaser does not constitute possession, despite the fact that the high seas purchaser makes entry for and pays duty on the merchandise. In short, temporary ownership, even such ownership with concurrent storage in tanks leased or owned by the owner, does not create possession if the "owner" is dealing in commercial paper, rather than the commodity itself. Middleman dealers in commodities are not possessors despite being owners.

218100

HOLDINGS:

1. Based on the facts, the crude degummed soybean oil is not fungible in this case.

2. The corporation in none of the situations set out by counsel has possession of both the imported and substituted soybean oil to the extent necessary to support a claim for drawback under 19 U.S.C. 1313(j)(3).

Issue: Whether "lawful duties" paid pursuant to 19 U.S.C. 1592(d) legally constitute "duties" and are thus subject to drawback under 19 U.S.C. 1313?

Law and Analysis: Monies paid to the United States which legally constitute "duties" are properly the subject of drawback under 19 U.S.C. 1313 (see section 191.3, Customs Regulations, 19 CFR 191.3).

In this regard, as set forth in 19 U.S.C. 1592(d), "if the United States has been deprived of lawful duties as a result of a violation of subsection (a) of this section, the appropriate customs officer shall require that such lawful duties be restored, whether or not a monetary penalty is assessed." Section 1592(d) is implemented by section 162.79b, Customs Regulations (19 CFR 162.79b), which states that such lawful duties are to be restored within 30 days of a written notice demanding their deposit or payment, and that application may be made in this connection to the Commissioner of Customs for review.

By way of brief background, subsection (d) was added to section 1592 by the Customs Procedural Reform Act of 1978, Pub. L. No. 95-410, section 110(a), 92 Stat. 888, 896, in order to remedy the problems relating to the finality of liquidations. As a result, the United States, under section 1592(d), is able to require the restoration of duties even though a particular entry and liquidation have become final within the meaning of 19 U.S.C. 1514(a).

Accordingly, in United States v. Ross, 574 F. Supp. 1067, 1069 (U.S.C.I.T. 1983), the Court of International Trade, in holding that the United States did not have to follow the elaborate penalty procedures of section 1592 when pursuing "a duty claim" under subsection (d), stated that "[s]ubsections (b) and (c) of §1592 are cast in such terms as 'monetary penalty' or 'penalty claim.' Subsection (d) alone deals with 'lawful duties' and makes no reference to the preceding matters."

Additionally, in C.S.D. 81-223, Customs concluded that a surety on a Customs entry bond was liable for the payment of "duty" determined to be due under section 1592(d), inasmuch as a surety was "jointly liable with a bond principal for payment of any duty due when demanded."

C11

MAY BE RELEASED TO THE PUBLIC _____

Hence, it is clearly recognized and understood both judicially and administratively that "lawful duties" paid under section 1592(d) simply represent "duties" from a legal standpoint, this view being fundamentally supported by the plain meaning as well as by the evident legislative intent of subsection (d).

Holding: "Lawful duties" paid pursuant to section 1592(d) legally constitute "duties" and are thus subject to drawback under 19 U.S.C. 1313.

ISSUES:

Is drawback allowed under the substitution same condition drawback law, 19 U.S.C. 1313(j)(3), upon exportation of imported fungible substituted merchandise, assuming compliance with all requirements of the law and guidelines as set out in C.S.D. 85-34?

FACTS:

A Customs broker has requested a ruling on the presented issue.

LAW AND ANALYSIS:

Section 202 of Public Law 98-573 sets out the provisions of the same condition substitution drawback law, 19 U.S.C. 1313(j)(3). Legislation has been introduced to designate correctly the provision as 19 U.S.C. 1313(j)(2).

The statute specifically provides:

> (j)(3) If there is, with respect to imported merchandise on which was paid any duty, tax, or fee imposed under Federal law because of its importation, any other merchandise (whether imported or domestic) that--
>
> > (A) is fungible with the imported merchandise . . . (Emphasis added).

HOLDING:

The law specifically allows substitution of other imported fungible merchandise for imported merchandise. This ruling is limited solely to the issue as stated.

Director, Classification and Value Division
Chicago, Illinois 60603

Dear Sir:

Re: Chicago Protest and Request for Further Review 3501-4-000006 of March 29, 1984 - 19 U.S.C. 1313(c) - Specifications - Latent Defects - Polysulphone Support and Spacer Plates

This is in reference to the referenced protest, request for further review, and other referenced subjects.

ISSUE:

1. When must alleged failures to meet specifications for merchandise sought to be exported with drawback under 19 U.S.C. 1313(c) as rejected merchandise be brought to Customs attention in order to obtain an extension of the 90-day return of merchandise provision in the statute and former section 22.33(a) and present section 191.142(a)(4) of the Customs Regulations?

2. Are allegations of failure to meet Governmental standards sufficient to prove merchandise ordered does or did not meet those standards?

FACTS:

Polysulphone spacer plates and supports used in the processing or production of whey by reverse osmosis were imported by protestant between some time in April 1981, and November 1982, under cover of approximately 100 entries. These were supplied to and installed in various dairies by protestant. On August 20, 1983, protestant's broker notified the District Director at Minneapolis of its intent to return the plates because they were defective, and that due to circumstances beyond its control, protestant was prevented from returning the merchandise to Customs custody within 90 days of its release, as required by section 1313(c) and former section 22.33(a) of the regulations. The District Director or his designee agreed to an extension of time for return of the goods under the same regulations, evidently believing the defects discovered by the protestant were latent.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

C14

Customs accepted eighteen drawback entries on October 13, 1983, and drawback was denied on December 21, 1983. Protestant claims in the timely protest filed March 20, 1984, that the spacer supports and plates did not meet minimum life requirements as agreed to by the manufacturer and that they did not meet United States Department of Agriculture (U.S.D.A.) requirements, as conveyed to the manufacturer and agreed to by the manufacturer/supplier. The manufacturer has agreed to replace the supports and spacers "at cost," approximately 70 percent of the normal price to its customers.

Drawback was denied because there was no showing of any failure to meet warranties or guarantees to support a rejected merchandise claim, and further there was no evidence showing failure to conform to U.S.D.A. standards or that protestant had communicated these standards to the seller as part of the agreement to purchase.

LAW AND ANALYSIS:

Former section 22.32(b) of the Customs Regulations (present section 191.142(b)(2)) requires the claimant for drawback for rejected merchandise to submit, if no written order was placed, a certificate of the actual owner setting forth the specifications of the order and the method by which the specifications were communicated to the seller.

The polysulphone spacers replaced noryl support and spacer plates which had previously resulted in product leakage in 1977. In the dairy industry, leakage and the sanitary problem caused by the trapping of whey in the space plates did not occur and were not discovered overnight. Regarding noryl plates, used prior to the polysulphone plates, the U.S.D.A. had written protestant in December 1977, referring to minor problems, as well as the major problems of trapped whey and leakage. U.S.D.A's Poultry and Dairy Quality Division informed protestant that further inspection would be delayed until the initial of protestant's customers' plants was equipped with the new (polysulphone) plates. On February 8, 1978, the manufacturer/supplier, in a letter to protestant, informed it that "... it is important to check the (assembling) pressure (30.000kp) before the starting up." Regarding the leakage, the manufacturer would examine the possibility of insertion of pipe fittings all the way through the module flange as proposed by protestant, but that the problem was ... "(T)hat our present stock of flanges with male parts pressed-in will be enough for 2 years'consumption, and an alteration of these will therefore be very expensive." (Emphasis added) Drawings were supplied by the manufacturer with the letter which it claimed show that when the flange is pressed down at 5,000 kp pressure, the leakage/ sanitary danger would not arise.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

D1

518812

U.S.D.A. then informed the protestant that the "press-fit" arrangement shown by the drawings "appears to be satisfactory until the present inventory is used up." Letter of April 2, 1978, from U.S.D.A. Diary Inspection Branch to protestant. On July 25, 1980, the Poultry and Dairy Quality Division, U.S.D.A., regional supervisor wrote one of protestant's dairies that "in view of light materials observed on the plates and other unsatisfactory conditions observed ... we are not able to approve the whey operation at this time." The file in this case also contains notes/memoranda made by the U.S.D.A. field representative saying "(the noryl) plates are breaking like mad by the hundreds ..." (but) "DDS (the manufacturer) has new plates made of polysulphone now --- We're norel (sic), Will replace all US norel (sic) plates. Still have double outside seal ring but research underway to eliminate it." The representative was referring to the new polysulphone plates as still having the double outside ring which resulted in leakage but that research was underway to eliminate leakage. Notes of a June 6, 1981, phone conversation indicate protestant was "busy replacing noryl plates with new double ring polysulphone type. They're cleaning great, <u>except between the rings</u>. <u>New single ring PS plate is coming along next</u>. Old ring 2 plates will go to animal feed ... (Unknown) isn't having trouble with breaking plates." Emphasis added.

The foregoing notes taken by a U.S.D.A. official from statements made telephonically by protestant's representative indicate the plates in question here were accepted or at least acceptable even though they did not clean well, and did not eliminate leakage entirely, and that protestant apparently was willing to use them until "research" resulted in leakproof equipment, i.e., the single-ring plates which are apparently being sold at cost by the manufacturer to replace the rejected plates. Another representative of protestant informed U.S.D.A. in March 1982, that DDS still had the double ring plates but that protestant would replace them "free" later.

Former section 22.33(a), Customs Regulations requires that rejected merchandise be returned to Customs custody within 90 days of its release, and no extension of that period will be given unless the district director is satisfied the importer has been or will be prevented by circumstances beyond his control from returning the merchandise within the prescribed periods. See section 191.142(a)(1) of the present Customs Regulations.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

218215

D2

Customs has allowed importers to return rejected merchandise after the 90-day period when it is convinced the failure to meet a specification was not discovered or was incapable of being discovered because of latent defects which surfaced after the running of the 90-day period. Implicit in allowing extensions for such hidden defects, such as in C.S.D. 81-176, is that latent defects are brought to Customs attention at the time they become patent defects. It is true that in this case Customs allowed an extension of time for filing the entries and returning the plates to our custody. But this allowance was based on the assumption that the sanitary and leakage problems were of recent vintage. The file indicates that as early as six weeks after the initial entry of the double ring polysulphone plates, on June 12, 1981, they did not clean properly and that on April 4, 1981, protestant was aware that the double ring polysulphone plates would not eliminate the leakage inherent in the noryl plates but that research was under way. In short, insofar as specificatior ire concerned, protestant received the plates which it ordered, d was awaiting until improved replacement plates (singl ring) were available from the manufacturer. When they finally were available, over 26 months after initial importation, protestant filed rejected merchandise drawback entries in August 1983, claiming latent defects precluded earlier return. As to life expectancy, there is no evidence in the file to indicate premature breakage of the double ring plates. Protestant apparently ordered a stock item and "hoped for the best" pending technological improvement. In any case, we have previously held that failure to meet warranty guarantees as to length of service does not in and of itself constitute a failure to conform to specifications. When the credit allowed in such cases is for all or substantially all of the purchase price, the merchandise may be considered as not conforming. T.D. 66-169-1, cited in C.S.D. 83-104. Here, the replacement plates are being supplied at cost, approximately 70 percent of the usual price. This does not meet our standards set in T.D. 66-69-1 as to the possibility of warranty guarantees supporting a claim of failure to meet specifications.

Counsel for protestant cites many court cases referring to type of proof, and acceptance of such proof, necessary to show a communication of certain necessary specifications between the buyer/importer and the foreign seller/manufacturer, e.g., Pistachio Corporation v. United States, 23 Cust. Ct. 103, C.D. 1193 (1949) app. dismissed 37 CCPA 127 (1950); Lansing Company v. United States, 77 Cust. Ct. 92, C.D. 4675 (1976). In these cases, however, the claimant submitted proof of some defect in merchandise sufficient, in the courts' opinions, for the claimant to carry the burden of proof. In the instant case,

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

D3

218215

counsel alleges that the plates broke within 8 or 9 months, and sometimes as soon as two or three weeks. There is no reference in the file to breakage of the polysulphone plates, other than the allegation by counsel. All references to breakage are to the earlier noryl plates. Further, counsel alleges because dairy products manufactured, processed, or packaged in a nonapproved plant could not be inspected by the U.S.D.A., citing 7 CFR 58.122(a) (1983), that these plates did not meet U.S.D.A. standards, a specification required by the protestant. The file does include some references by the U.S.D.A. to unacceptable sanitary conditions, leakage, and the like, attendant to the noryl plates, but there is no indication from the Department of Agriculture that these conditions would place any of protestant's customers' plants under the sanctions of the noted U.S.D.A. regulation if the polysulphone plates were used. On the contrary, the U.S.D.A. officials involved apparently only gave protestant notice of the shortcomings on the noryl plates, and suggestions how to correct them, noting that the officials would reinspect the operation at a later date. In fact, the drawings referred to above regarding assembly were pronounced "satisfactory" by U.S.D.A. until the present inventory is used up. There are no indications that U.S.D.A. stated that no product of these dairies would be inspected or that any orders were issued to stop production of whey or other dairy products for human consumption while polysulphone plates were used. In short, other than counsel's allegation of failure to meet U.S.D.A. specifications, we have no other indication of this failure. It certainly is not mentioned in protestant's broker's letter of August 30, 1983, to the District Director, where he was told that the reason for delay in returning defective units was due to time necessary for replacing the defective plates and rebuilding their modules.

The courts have allowed drawback in these cases based on unwritten specifications, (Lansing, supra), and oral specification. Mattia Localelli v. U.S., T.D. 46390, 63 Treas. Dec. 829 (1930). However, also in these cases and crucial to the courts' findings, it was shown that such specifications had been breached. Other than counsel's allegation, in the case before us we have no showing of such a breach, and mere allegations by counsel are not evidence. Bar Bea Truck Leasing Co., Inc. v. U.S., 5 CIT _____, Slip Op. 83-22 (1983).

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

D4

2/8215

The provision for refunds on rejected merchandise was inititated to help American importers who receive goods that were so far from specifications as to be useless. See C.S.D. 84-110, citing the legislative history found in H. Rept. 7, 71st Cong., 161 (1929); H. Doc. 15, 71st Cong., 333 (1929); and S. Rept. 27, 71st Cong., 62 (1929), and C.S.D. 83-104 supra, citing legislative history of Public Law 71-369, 71st Cong., (H.R. 2667), Vol. 9, Part 2, part 9749, in particular.

Granting arguendo the plates did not meet U.S.D.A. or other specifications, protestant continued to import them and use them as they were ordered, until the new, improved models were available. At that time, alleged defects were called to Customs attention with an attendant claim for drawback. The Congress did not contemplate a refund of drawback in these circumstances.

HOLDING:

1. Drawback claimants under 19 U.S.C. 1313(c) must bring latent defects to Customs attention immediately upon discovery to be eligible for an extension of the 90-day period for return of rejected merchandise to Customs custody.

2. Mere allegations of failure to meet Governmental Standards are not sufficient to meet the burden of drawback claimants under 19 U.S.C. 1313(c).

You are directed to deny the protest in full.

The Regional Commissioner of Customs
Chicago, Illinois 60605

Dear Sir:

You are hereby authorized to allow drawback on stainless steel tanks manufactured under the provisions of section 1313(b), title 19, United States Code, and Part 22 of the Customs Regulations, by The Cornelius Company, Anoka, Minnesota, with the use of cold rolled stainless steel sheet. There is enclosed, approved, a copy of the manufacturer's drawback statement subscribed to on February 6, 1968, requesting the foregoing action and containing the manufacturer's proposals as to procedures it will follow and records it will keep. Such records shall include those prescribed in section 22.5(a)(1) through (6) of the Customs Regulations.

The quantity of imported cold rolled stainless steel sheet, or of such merchandise manufactured under drawback regulations, of the required kind and quality which may be designated as the basis for the allowance of drawback hereunder, shall not exceed a quantity of such merchandise of the same kind and quality as that designated which appears in the exported articles, as shown by the schedule which is attached to and forms a part of the drawback statement of February 6, 1968.

In order to avoid an overallowance of drawback, in cases where, because of its metallic composition, the imported designated material is dutiable in a greater amount than the merchandise used to manufacture the exported articles would have been if it had been imported, appropriate adjustment shall be made in liquidation in conformity with the principles set forth in CIS 709/42 of October 13, 1942. Where the imported designated material, because of its metallic content, is dutiable in a lesser amount than the merchandise used to manufacture the exported articles would have been if it had been imported, no adjustment shall be made.

FOR PUBLICATION 731.1 278944

MAR 12 1948

T.D 51865-B

The Collector of Customs

New York 4, N. Y.

Sir:

You are hereby authorized to allow drawback upon compliance with the provisions of section 313(a), title III, Tariff Act of 1930, and the drawback regulations (Part 22, Customs Regulations of 1943), on gasoline, blended gasoline, fuel oil, and blended fuel oil manufactured by The Texas Company, New York, N. Y., at its Port Arthur, Tex., factory with the use of imported naphtha distillate, also known as naphtha.

The manufacturer has filed a sworn statement subscribed to on October 14, 1947, in accordance with the provisions of section 22.4(h), Customs Regulations of 1943, describing the methods which it will follow and the records which it will keep for the purpose of establishing that the articles described therein have been manufactured with the use of properly identified imported merchandise in accordance with the provisions of section 313(a) of the tariff act and the regulations (sec. 22.4). The manufacturer shall follow the methods described and shall keep the records outlined in this sworn statement, a copy of which is enclosed for your information.

At the end of each period, which shall not exceed 1 month during which the above-mentioned petroleum products are manufactured for exportation with benefit of drawback, there shall be filed a sworn abstract of the manufacturing records showing as to such products the quantity, identity, and value of the imported merchandise put into process during the period, the quantity, description, and relative values of the various finished and intermediate products obtained, the stock in process (in terms of the imported merchandise) put into process at the beginning of the period and the quantity on hand at the end of the period, and the quantity and value of the waste incurred.

The drawback allowance shall not exceed the duty paid, less 1 per centum thereof, on the quantity of imported merchandise used in the manufacture of the said products, less the quantity of imported merchandise which the value of the waste will replace, the drawback to be distributed to the several products obtained in accordance with their relative values at the time of exportation as shown by a sworn abstract of the manufacturing records provided for above.

278944

D8

MAR 15 1948

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

When a drawback product is blended with a domestic product or a duty-free product to make a blended product, the drawback allowance on such blended product shall not exceed the drawback accruing to the quantity of the drawback product used in the manufacture of the exported article, as shown by a sworn abstract of the manufacturing records provided for above.

The gasoline burned in the plant of the manufacturer, converted to its fuel oil equivalent, shall be considered a valuable waste.

The entire period covered by the abstract shall be deemed the time of separation of the petroleum products covered thereby.

Drawback may be allowed hereunder, upon compliance with the law and regulations, on the articles covered hereby which are manufactured on and after July 10, 1947, and exported on and after August 1, 1947. In cases where the imported merchandise was imported on or after June 18, 1930, exportation shall be made within 3 years after importation of the imported merchandise.

Very truly yours,

(Signed) W. E. HIGMAN

FEB 27 1962

DB 731.1 L

TD55580-FF

FOR PUBLICATION

Honorable Sam D. W. Low
Collector of Customs
Galveston, Texas

Dear Mr. Low:

T. D. 46508-G, as extended by T. D. 50569-J and amended by T. D. 52659-E, 53986-G, 54773-F, 54946-I, and 54975-G, authorizing the allowance of drawback under the provisions of section 313(a) Tariff Act of 1930, on various petroleum products manufactured by Texaco, Inc., New York, New York, at its several refineries with the use of, inter alia, tax-paid crude petroleum, is hereby further amended to cover petroleum products manufactured under section 313(b) of the tariff act, as amended, at the corporation's factories located at Port Arthur, Amarillo, and El Paso, Texas; Casper, Wyoming; Westville and Bayonne, New Jersey; Lawrenceville, and Lockport, Illinois; Sunburst, Montana; Tulsa, Oklahoma; Norfolk, Virginia; Providence, Rhode Island; Wilmington, California; Clearport, Delaware; and Anacortes, Washington, with the use of crude petroleum, naphtha distillates, miscellaneous distillates, and residual oils.

The manufacturer has filed a supplemental statement subscribed to on July 18, 1961, in accordance with the provisions of section 22.4(c) of the Customs Regulations, setting forth that the methods which it will follow and the records which it will keep for the purpose of establishing that the articles exported have been manufactured in accordance with the provisions of section 313(b), of the tariff act and the regulations (sec. 22.5) will be the same as those described in the statements upon which the above-mentioned Treasury Decisions were predicated, and as described in the aforementioned supplemental statement, a copy of which is enclosed for your information.

The said records shall show:

(1) The quantity, identity, kind, and quality of the imported crude petroleum, naphtha distillates, miscellaneous distillates, and residual oils which will be designated as the basis for the allowance of drawback on the exported articles;

278946

D10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ——

(2) That such designated merchandise has been used in manufacture within 3 years from the date on which it was received by the above-named company;

(3) That the exported products upon which drawback is claimed were manufactured either with the use of (a) the designated merchandise, (b) other merchandise of the same kind and quality as the designated merchandise, or (c) any combination of the foregoing;

(4) That the exported articles were manufactured within 3 years from the date on which the designated merchandise was received by the above-mentioned company;

(5) That duty-free or domestic merchandise of the same kind and quality as that designated was used in manufacture within a period not to exceed 3 years from the receipt of the said designated merchandise; and

(6) The quantity of crude petroleum, naphtha distillates, miscellaneous distillates, and residual oils of the same kind and quality as that designated which was used in the manufacture of the exported articles, such quantity to be distributed to the several products obtained in accordance with their relative values at the time of separation.

The 3-year period set forth herein, authorized by the Customs Simplification Act of 1953, replaces the 1-year period heretofore in effect. The 3-year period is not applicable if the 1-year period expired before September 7, 1953, the date the above Act became effective.

The quantity of imported crude petroleum, naphtha distillates, miscellaneous distillates, and residual oils, of the required kind and quality, which may be designated as the basis for the allowance of drawback hereunder, shall not exceed a quantity thereof equivalent to the quantity of crude petroleum, naphtha distillates, miscellaneous distillates, and residual oils, respectively, of the same kind and quality as that designated, which was used in the manufacture of the exported articles and is attributable thereto as determined in accordance with the provisions of paragraph No. (6), above, as shown by an abstract of the manufacturing records.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D11

278946

The manufacturer shall file with you for each of the months of October, November, and December, 1958, and for each year thereafter an abstract of its manufacturing records showing in the form and to the extent set forth in the exhibits incorporated in and made a part of the supplemental statement of July 18, 1961, the information required to enable your office to liquidate drawback entries in accordance with the provisions set forth above. Your attention is invited to the fact that the procedure contemplated under the above-mentioned exhibits may be modified to the extent permitted in T. D. 55563(1). With respect to the said exhibits, sheet B of Exhibit B-Summary shows the date of importation of the designated merchandise, but not the date of receipt of such merchandise. Since the date of receipt of the designated merchandise is an essential factor in establishing compliance with the provisions of subparagraphs 2, 4, and 5 of section 22.5(a) of the Customs Regulations, information in that regard shall be required on sheet B of Exhibit B-Summary.

The manufacturer shall also file with you for the months of July, August, and September, 1958, the documents described on page 17 of the enclosed supplemental statement covering operations at its Port Arthur, Texas, refinery during such months.

The manufacturer's supplemental statement of July 18, 1961, contains the following agreement:

> It is understood and agreed that in no case will imported crude petroleum be designated as the basis for the allowance of drawback on exported articles where such articles could not be obtained in the quantity exported from such crude petroleum.

In other words, the quantity of articles which may be exported against a given quantity of imported crude may not exceed the quantity of such articles which could be produced from the quantity of imported crude designated, with due regard to related by-products.

In view of the fact that the manufacturer's substitution proposal includes naphtha distillates, miscellaneous distillates, and residual oils in addition to crude petroleum, it is necessary that the foregoing agreement be extended to cover such additional materials. Before any drawback entries filed under this authorization and covering the substitution of naphtha distillates, miscellaneous distillates, or residual oils are liquidated, the manufacturer shall be required to submit to you a statement in writing containing the necessary extension to the said agreement.

Unreasonable

D12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

279846

Drawback may be allowed hereunder upon compliance with the law and regulations, on articles covered hereby which are manufactured at the corporation's Port Arthur, Texas refinery on and after July 1, 1958, and exported on and after October 1, 1958, and on articles which are manufactured at the other refineries covered by this authorization and exported on and after October 1, 1958. Exportation shall be made within 5 years after importation of the imported merchandise.

The manufacturer has requested in a letter of September 20, 1961, copy enclosed, an extension of the time for filing drawback entries hereunder. In that regard, the drawback application which initiated action resulting in this amendment was filed November 21, 1958. Preparation of the supplemental statement of July 18, 1961, was held in abeyance pending a decision by the Bureau with respect to the criteria for determining which imported and domestic crude petroleums are of the same kind and quality, which decision was made in February, 1961.

In the circumstances the 3-year period provided in section 22.13(a) of the Customs Regulations for completing drawback claims filed hereunder is hereby extended through October 31, 1962, with regard to claims covering articles exported prior to January 1, 1960.

In view of the fact that beginning with 1959, the manufacturer will file claims on an annual basis, it also presents the question in the letter of September 20, 1961, whether the 3-year period in section 22.13(a) of the Customs Regulations would be based upon the last calendar month of the yearly filing period. In other words, would the 3-year period for the claim covering 1959, end on December 31, 1962?

Compliance with section 22.13(a) of the Customs Regulations requires that the drawback entry be filed within 3 years after exportation of the earliest shipment covered by the entry. For example, if the earliest shipment covered by the manufacturer's drawback entry for 1961, was exported on January 20, 1961, the said entry is required to be filed on or before January 19, 1964.

Sincerely yours,

(Signed) W. E. Wigman
Deputy Commissioner

DB 516.24 LO

295030

Mr. Ben A. Burk
Regional Commissioner of Customs
San Francisco, California 94102

Precedent

Dear Mr. Burk:

This is in reply to Regional Counsel Gilmore's letter of October 4, 1971, requesting guidelines as to degree and type of supervision required for duty free status of an earth moving machine imported under item 864.50, TSUS.

It is stated in the report of Special Agent Dennis Derr, dated September 20, 1971, that the machine in question was imported from Canada on June 30, 1971, by [redacted], a nonresident, for [redacted]. It is further stated that the rig was driven to Baultoff, Alaska, where it was operated twenty-four hours per day and seven days per week until the job was completed on July 18, 1971. Each drilling day was divided into two twelve hour shifts with three men, a driller, a driller's helper, and a sampler, working on each shift. [redacted], the nonresident supervisor, remained near the rig until the job was completed, even though he was not one of the three men who operated the machine. Inasmuch as it was physically impossible for [redacted] to remain with the rig on a 24 hour day basis seven days a week, the question presented is whether the operation of the rig when [redacted] was away constituted a violation of the bond. Because there have not been any recently published guidelines, you are requesting a Bureau ruling.

295030

The Bureau is of the opinion that the above-mentioned facts do not warrant a finding that the bond has been violated. The Bureau has said previously that the nonresident for whose use merchandise is entered under item 864.50, TSUS, need not personally use the merchandise, but that it must in any event be used under his supervision. To meet that requirement, we do not believe it to be necessary that the nonresident be physically present to personally witness the use of the imported merchandise at all times. Rather, it would suffice if the nonresident exercise full personal control

APR 11 1962
DB 712.2 o
Precedent

Dear Mr.

In your letter of November 20, 1961, in which you indicate that you represent a group of associates who are desirous of opening a series of so-called "duty-free" stores on the United States side of the United States-Canada border, you ask the following questions (numbered for convenience in answering):

1. Are there any specific United States regulations concerning such an enterprise, or the location of such an enterprise, or is it rather a question of obtaining a permit to operate a customs bonded warehouse. If the latter is the case, what are the requirements with respect thereto?

If our understanding of your proposed operations is correct, you intend to sell to persons departing from the United States into Canada merchandise from customs bonded storage or customs bonded manufacturing warehouses upon which duties have not been paid. As such merchandise is to be exported into Canada upon its sale to purchasers departing from the United States, duties would not be collected thereon.

Generally speaking, merchandise may be withdrawn from customs bonded storage warehouses, and from customs bonded manufacturing warehouses, for exportation without the payment of duties, under the authority in sections 557 and 311, Tariff Act of 1930, as amended, provided there is compliance with the provisions of these sections of the law, and with the pertinent regulations. However, as it will be necessary for you to both store and manipulate the bonded merchandise on your premises prior to sale and exportation, the establishment

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E2

of a class 2-8 customs bonded warehouse will be required for that purpose. Application to establish such a bonded warehouse shall be made to the collector of customs in whose district the warehouse is to be located in accordance with section 19.2 of the Customs Regulations. A copy of sections 19.1 to 19.12 of the regulations, which sections pertain to the establishment and operation of customs bonded warehouses, is attached hereto.

2. What, if any, are the citizenship requirements for proprietors of customs bonded warehouses?

We are aware of no such requirements.

3. What are the licensing requirements in connection with such establishments, and what is the licensing period?

See the enclosed copy of sections 19.1 to 1912 of the Customs Regulations. Additional information in this matter should be obtained from the collector of customs with whom your application is filled.

4. Are there any special reporting requirements?

Although an adequate reporting procedure must be approved by the local collector of customs, a bonded warehouse operation of the type contemplated will probably require the services of a full-time customs warehouse officer during all working hours (the salary of such officer to be reimbursed to the Government) in order that there may be continous customs supervision thereof.

5. May the merchandise sold at the border store be delivered directly to the purchaser, or must such sales be concluded by mail, i.e., order-taking for subsequent mail order delivery?

It is not necessary that purchases be delivered by mail. However, the bonded merchandise must remain under customs supervision until it is actually exported. This requirement may be satisfied by delivery of the merchandise by bonded carman to the customs border station, where a transfer to the departing purchaser may be made under the supervision of the customs officer there.

E3

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

The balance of your questions have to do with "tourist duty free" importations by returning residents of the United States or by nonresident visitors.

There is enclosed a copy of paragraph 1798 of the Tariff Act of 1930, as amended, with a cover sheet explaining the effect of the latest legislation in this field which has temporarily reduced the maximum amount of tourist exemptions available, with minor exceptions, to $100.

Merchandise need not accompany a returning resident but may be shipped to him by mail or other means after his return to the United States. The returning resident should declare such goods "to follow" on his baggage declaration. He will be given a Customs Form 3351, Release For Unaccompanied Tourist Shipment, to present to the postman or to file with customs if the goods arrive by freight, and will receive the merchandise duty free if his total importations are within the limits of his tourist exemptions. The traveler cannot receive any exemption in advance of his trip because the exemption does not accrue until the resident returns to the United States.

However, exemptions from duty under the provisions of paragraph 1798, as amended, are granted only as an incident of foreign travel. United States residents who are traveling abroad and who order goods from a foreign trade zone or customs bonded warehouse located in the United States may not apply their tourist exemptions to such purchases upon their return to the United States.

A resident of the United States may order merchandise from one foreign country while traveling in another foreign country under the provisions of paragraph 1798, as amended. He may not conclude a purchase of merchandise from a foreign country while he is in the United States and then travel abroad to take possession of the article or arrange to have it sent to him after his return to the United States.

Similarly, a nonresident may bring into the United States nonrestricted merchandise from any source, but he may not order goods from a foreign country while in the United States and enter them free of duty.

Alcoholic beverages shipped from abroad are not entitled to free entry under the $10 exemption for unsolicited gifts.

Mr. Michael Stramiello, Jr.
Regional Commissioner of Customs
New York, New York 10004

Dear Mr. Stramiello:

You are hereby authorized to allow drawback upon compliance with the provisions of section 1313(b), title 19, United States Code, and Part 22 of the Customs Regulations, on fuel gas, unsaturated aliphatic hydrocarbons, aromatics, and ethylene manufactured by Union Carbide Corporation, New York, New York, at its factory located at Torrance, California, with the use of refinery gas, and on polyethylene, and ethylene oxide manufactured by the said company under the provisions of section 1313(b) with the use of ethylene, at such factory.

There are enclosed, approved, copies of the manufacturer's drawback statements subscribed to on June 5, 1969, and April 29, 1970, requesting the foregoing action and containing the manufacturer's proposals as to the procedures it will follow and the records it will keep. Such records shall include those prescribed in section 22.5(a)(1) through (6) of the Customs Regulations. The records shall show the quantity of refinery gas, of the same kind and quality as that designated, which was used in the manufacture of articles hereunder, such quantity to be distributed to the fuel gas, unsaturated aliphatic hydrocarbons, aromatics, and ethylene obtained in accordance with their relative values at the time of separation.

The quantity of refinery gas, manufactured under drawback regulations, of the required kind and quality, which may be designated as the basis for the allowance of drawback hereunder, shall not exceed a quantity thereof equivalent to the quantity of such merchandise of the same kind and quality as that designated, which was used in the manufacture of fuel gas, unsaturated aliphatic hydrocarbons, aromatics, and ethylene and is attributable thereto as determined in accordance with the provisions of the preceding paragraph, as shown by an abstract of the manufacturing records which shall be filed with the drawback entry.

298370

298370

EC

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

The quantity of ethylene manufactured under drawback regulations, of the required kind and quality, which may be designated as the basis for the allowance of drawback hereunder, shall not exceed a quantity thereof equivalent to the quantity of such merchandise of the same kind and quality as that designated which was used, respectively, in the manufacture of polyethylene, and ethylene oxide, as shown by an abstract of the manufacturing records which shall be filed with the drawback entry.

The application for this action was received by the regional commissioner of customs, New York, New York, on February 17, 1969. The present action could have been issued as an amendment to the existing drawback rate of Union Carbide Corporation, T.D. 55655-I, as amended, rather than as a new drawback rate. As the effective dates of amendments to rates of drawback may, under the authority of section 22.4(c) of the Customs Regulations, be made effective prior to the receipt of the application for the amendment, and as this rate of drawback could have been issued as an amendment, if the Bureau found that course preferable, the Bureau is of the opinion that the effective date of this rate may antedate the receipt of the application on February 17, 1969.

Drawback may be allowed hereunder, upon compliance with the law and regulations, on the articles covered hereby which are manufactured on and after January 1, 1967, and exported on and after January 7, 1967. Exportation shall be made within 5 years after importation of the imported merchandise.

Sincerely yours,

BAG 5-05 R:E:E
305819 W

Mr. George White
Department of State
EB/OT/STA - Room 3331
Washington, D. C. 20520

Dear Mr. White:

This is in reference to a telegram sent March 28, 1978, from the American Embassy in Belgrade, Yugoslavia, concerning reciprocity in Customs treatment of foreign companies. The telegram asks if there is a provision in the Customs laws of the United States permitting foreign companies to import temporarily office equipment, including automobiles for official business use, without payment of Customs duty. Alternatively, the telegram inquires as to the possibility for a person who would, for Customs purposes, be considered a nonresident of the United States, to import duty-free household goods and/or office equipment, including either a personal or company automobile.

305819

While item 864.50 of the Tariff Schedules of the United States (TSUS) (copy enclosed) permits duty-free entry under bond of professional equipment and tools of trade, which would include certain items of office equipment, an automobile is not considered to fall under either of those categories. Nor would an automobile, either for personal or company use, be considered as part of a nonresident's household effects, which would be entitled to duty-free entry (if actually used abroad for not less than one year and not intended for any other person or for sale). However, section 148.45 of the Customs Regulations (19 CFR 148.45) (copy enclosed)

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E8

entitles a nonresident to duty-free entry of an automobile under item 812.30, TSUS (copy enclosed) if it is imported in connection with the nonresident's arrival in the United States and is to be used in this country only for the transportation of the nonresident, his family and guests. Sections 12.73(b)(5)(v) and 12.80(b)(2)(v) of the Customs Regulations (copies enclosed) provide that an automobile which is not in compliance with federal safety and air pollution control standards is to be imported by a nonresident for a period not exceeding one year and is not to be sold in the United States during that time. Sections 12.73 and 12.80 provide for importation under bond of a nonconforming automobile which the importer declares will be brought into compliance with federal standards.

Request for Internal Advice No. 182/80

This is in response to the referenced Internal Advice request concerning whether or not certain charges incurred by the importer form part of the dutiable value of the imported merchandise. Specifically, two payments to the exporter are at issue: (1) An amount representing a payment for the termination of the contract for the imported merchandise, and (2) A payment representing a penalty for late shipment of United States components to the exporter.

It is the opinion of your office that the subject payments are dutiable assists, and as such, are includable in the dutiable value of the imported articles. In support of your position, you cite Headquarters ruling R:CV:V TLL 541436, dated May 18, 1977, in which this office determined that amounts paid to an exporter pursuant to a standard termination clause of the original purchase contract formed part of the constructed value of the imported merchandise.

It is the opinion of the Chief, Duty Assessment Branch I/II in New York, that the subject payments are not assists, nor should they be considered part of the exporter's usual general expenses and profit for constructed value purposes. We agree.

In the instant situation, the payments in question do not relate to the assembly or manufacture of the imported articles, therefore, they would not be considered assists for appraisement purposes. Our May 18, 1977, ruling did not label the termination payments involved in that case as assists, but rather, indicated that the payments appeared to be part of the usual general expenses and profit of the exporter.

It is our opinion that the above-cited ruling relied upon by your office is not applicable in the instant situation. In that decision, Headquarters determined that the appraising office did not err in including the termination payments in the constructed value of the imported articles. In that case, the termination payment clause was executed as part of the original purchase agreement prior to importation, and no evidence had been submitted by the importer to indicate that the termination payment was an amount other than

E10

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

542303

"an amount for general expenses and profit equal to that usually reflected etc...." In the case before us, the record indicates that the cancellation payment and a late shipment penalty payment were the subject of supplementary agreements, executed after the original purchase contract. We note that it is not uncommon for parties to a contract to renegotiate agreements and arrange for the payment of damages where one of the parties wishes to amend or terminate previous agreements. Failure to renegotiate could subject the breaching part to suit, as well as impair or destroy the business relationship between the contracting parties.

In view of the above, we conclude that the payments in question do not form part of the "usual general expenses and profit" under section 402(d), and therefore, would not be included in the dutiable value of the imported merchandise.

SUBJECT: Valuation of Defective Parts Imported by Digital Corporation

This is in reference to your memorandum of March 7, 1984, which forwarded a request for a ruling, dated February 7, 1984, from (importer), concerning the proper basis of appraisement for certain merchandise returned to the United States for repair.

According to counsel's letter, the importer is engaged in the production and sale of computers and related equipment. The company's Field Service Organization (FSO) is responsible for the installation and maintenance of computers sold to customers throughout the world. When parts of computers owned by customers outside the United States become defective, the FSO, acting as part of the importer's foreign subsidiaries, arranges to have these parts sent either to a foreign service center or to the United States for repair. Defective parts are returned to the United States under three programs. These include two return and replacement (r & r) programs, which account for approximately 75 percent of all defective parts returned to the United States, and a return for credit (r & c) program, which accounts for the balance of the parts returned to this country.

Under the r & r programs, the returned parts are exchanged for repaired parts or, occasionally, new parts of the same kind and quality. Counsel for the importer maintains that no financial transactions occur upon return of the defective parts to the United States under the r & r programs. However, counsel states that, on occasion, intercompany transfer prices, referred to as Maynard Transfer Prices (MTP), are stated on the commercial invoices accompanying the returned parts in order to satisfy certain foreign export requirements. Counsel has submitted an opinion prepared by the importer's certified public accountants which provides, in part:

> No financial transactions occur upon return of the defective parts to the United States. Rather, the U.S. service center receives the material on a consignment basis. ... Although the U.S. service center maintains a perpetual inventory of defective parts awaiting repair or replacement, this is done for operating control purposes only and the material appearing on the perpetual inventory is assigned no financial value, ie. it is treated as an inventory consignment.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E12

Under the r & c program, the foreign subsidiary from which a defective part is received is given a credit equal to the MTP for that part. This price is shown on the commercial invoice and the credit is used by the subsidiary to acquire other parts needed to maintain a proper inventory.

Counsel contends that transaction value under section 402(b) of the Tariff Act of 1930, as amended by the Trade Agreements Act of 1979 (TAA), cannot be used as the basis of appraisement for the parts returned pursuant to the r & r programs for the reason that there are no financial transactions betwee the parties in regard to these parts and, therefore, the parts are not "sold" as required by section 402(b). Moreover, counsel maintains that as transaction value of identical or similar merchandise, section 402(c) of the TAA, also cannot be determined, deductive value, section 402(d), should properly be used to appraise the merchandise.

With respect to parts returned under the r & c program, counsel states that "the basis upon which the credit values were selected was arbitrary and done for administrative and internal accounting conveniences." Thus, counsel claims that the relationship between the importer and its foreign subsidiaries clearly influenced the establishment of the MTP. Under these circumstances, counsel contends that the value statute mandates that a comparison be made between the MTP and one of the test values set forth in section 402(b)(2)(B) of the TAA to determine the "acceptability" of the MTP for purposes of establishing transaction value. In this regard, the importer has calculated deductive values for parts which are identical or similar to parts imported under the r & c program. These values, which are significantly lower than the MTP values for comparable parts, establish, in counsel's opinion, that the MTP values do not represent "acceptable" transaction values. Counsel maintains that defective parts returned under the r & c program should be appraised under the deductive value method.

It is the opinion of your office that transaction value, as represented by the MTP, is the appropriate basis of appraisement for all merchandise imported pursuant to the r & r programs and the r & c program. Concerning the r & r programs, you note that the word "consignment" is defined as a shipment of goods sent to an agent for sale. You state that a review of the importer's submissions clearly indicates that the defective parts returned to the United States for repair are "not returned in order for the importer company to act as an agent for a sale." In regard to the r & c program, you characterize the importer's argument that the relationship between the buyer and seller influenced the price for the merchandise as "beyond the grasp of reason." You contend that the fact that the importer establishes the invoice price does not preclude acceptance of that price as representing transaction value.

Section 402(b) of the TAA defines transaction value, in pertinent part, as "the price actually paid or payable for the merchandise when sold for exportation to the United States" (emphasis added). We are satisfied from a review of

E13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

543288

the importer's submissions that no payment is made by the importer to its foreign subsidiaries for the parts which are imported pursuant to the r & r programs. Thus, we concur with the importer that transaction value cannot be determined with respect to these parts and that, assuming transaction value of identical or similar merchandise also cannot be determined, the merchandise should be appraised on the basis of deductive value.

However, it is clear that there is a "price actually paid or payable" for the parts which are returned pursuant to the r & c program. The importer argues in this regard that because it establishes the MTP for these parts, which essentially is the price for a comparable newly-manufactured part, it is evident that the relationship between the parties influenced the price. The importer states that common sense dictates that a defective part should not command the same value as a newly-manufactured part.

Section 402(b)(2)(B) of the TAA provides that the transaction value in a related party transaction will be deemed acceptable if an examination of the circumstances of the sale of the imported merchandise indicates that the relationship between the buyer and seller did not influence the price; or if the transaction value of the imported merchandise closely approximates any one of the four test values set forth in that subsection. The Statement of Administrative Action relating to Customs valuation makes clear that these two methods of determining "acceptability" are alternatives, that is, if the criteria o. either one is met, the transaction value will be accepted.

In TAA #61, dated March 25, 1983 (542792), copy attached, we were presented with essentially the same issue as that presented here. The importer (protestant) in that case unilaterally established, without negotiation, the price which it paid its foreign subsidiary for certain imported merchandise. The importer contended that the relationship influenced the price and that, therefore, transaction value was eliminated as the basis of appraisement. We held that:

> ... there is no basis on which we can determine that the relationship has not influenced the price, or that the price satisfies a test value. Under these circumstances, and where it appears that the parent does, in fact, set the prices, we must reject transaction value.

It appears that the decision in that case was based in part on the portion of the Statement of Administrative Action relating to Customs valuation which describes in some detail the circumstances of the sale that should be examined in determining whether the relationship influenced the price paid. The Statement provides in this regard that:

> ... if the price has been settled in a manner consistent with the normal pricing practices of the industry in question, or with the way the seller settles prices for sales to buyers who

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E14

95 4 3 2 8 8

543288

are not related to him, this will demonstrate that the price had not been influenced by the relationship.

There is no question that, in a transaction between unrelated parties, the seller would not permit the buyer to unilaterally, without negotiation, establish the sales price for the affected merchandise.

On the basis of the information available to us in this case, we are unable to determine that the relationship between the importer and its foreign subsidiaries has not influenced the price paid, or that the price satisfies an established test value. Thus, consistent with our holding in TAA #61, we conclude that if the importer, in fact, sets the MTP values which it pays its subsidiaries for parts returned pursuant to the r & c program, transaction value must be rejected as the basis of appraisement for these parts. Assuming, again, that transaction value of identical or similar merchandise also cannot be determined, deductive value would be the proper basis of valuation for this merchandise.

Please provide the importer with a copy of this decision.

District Director of Customs
Detroit, Michigan 48226-2568

Dear Sir:

Re: Application for Further Review of Protest No. 3801-4-000090, Dated January 13, 1984

This protest was filed against your appraisement of fuel pumps and other automotive parts sold by to a related importer, The importer's customhouse broker contends that the merchandise should be appraised under transaction value at invoice prices, Canadian funds, less an allowance for American components under item 807.00, TSUS. The importer also contends that there was an established intercompany Canadian exchange rate of United States $.85 against the Canadian dollar, and that the proper rate of exchange should be the published rate in accordance with 19 CFR 159.34 and 159.35. Since you advise that you allow a partial exemption from duty under item 807 where applicable, and use the published rates of exchange, these matters do not appear to be in issue in this protest. You also note that the broker did not submit any value information to support his position.

Since the sale in question is between related parties, the price actually paid or payable must be "acceptable" under the law to represent transaction value. Under section 402(b)(2)(B), the price is acceptable if an examination of the circumstances of sale indicates that the relationship did not influence the price, or the price closely approximates one of the statutory test values.

In your examination of the circumstances of sale, you advise that the Canadian company sells for export to unrelated United States buyers at arm's length and they purchase approximately 69 percent of the merchandise. Sales to the related company are at standard cost plus 10 percent, and the related company purchases approximately 10 percent of the merchandise. In comparing the cost breakdown for sale of the same item to the importer and to an unrelated O.E.M., there is no difference in the cost of labor and materials, but the factory overhead costs for related party transactions are only 32 percent of the amount used to calculate fixed factory overhead costs to manufacture the same article for the unrelated purchaser.

In your experience, factory overhead costs are the same for the manufacture of the same article, regardless of the class of purchaser, and a higher volume normally results in lower fixed overhead costs per piece produced.

F2

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

The parties allocate all general and administrative expenses associated with the sale of the merchandise to products produced for sale to unrelated purchasers. You recognize that while some such expenses such as commissions, warranties, advertising, etc. which are incurred in sales to unrelated parties may not be incurred in sales to a related company, other general and administrative expenses do normally accrue in both categories of sales.

In considering the circumstances of sale set forth above, we conclude, in agreement with you, that the relationship between the parties did influence the price paid or payable and that the price did not meet any of the statutory test values. Accordingly, the invoice price cannot represent transaction value, and appraisement should be on the basis of transaction value of identical or similar merchandise, section 402(c)(1)(A) and (B), if applicable.

Please deny the protest in full and send the importer's broker a copy of this decision with your notice of action on the protest. Your file is returned herewith.

Sincerely,

(Signed) Harvey B. Fox

DEPARTMENT OF THE TREASURY U.S. CUSTOMS SERVICE CORRESPONDENCE APPROVAL AND CLEARANCE Form 18611

MAY 13 1985

CLA-2 CO:R:CV:V
543440 CW

543440

Leonard L. Rosenberg, Esq.
Sandler & Travis, P.A.
Rivergate Plaza
444 Brickell Avenue
Miami, Florida 33131

Dear Mr. Rosenberg:

This is in response to your letter of October 19, 1984, in which you request a ruling, on behalf of your client, Bonnie International Corporation, that certain monies paid by your client to a related company constitute bona fide buying commissions under section 402 of the Tariff Act of 1930, as amended by the Trade Agreements Act of 1979 (TAA). We understand that your ruling request pertains to prospective transactions.

You state that your client, a United States company engaged in the importation and sale of handbags and similar articles, is entering into a buying agency agreement with Bonlyn Taiwan Co. Ltd., a Taiwan company. Your client and the Taiwan company are considered related parties under the TAA as they are both subsidiaries of a third company. You state that the written agreement between your client and the Taiwan company provides that the latter will perform the following services on behalf of your client:

1. Advise the importer on prices and sources of merchandise available for export to the United States,

2. Solicit offers to sell merchandise and procure samples of the merchandise for the importer's consideration,

3. Place orders and purchase merchandise at the request of the importer,

4. Monitor and advise the importer of the status of all orders until delivery has been made,

5. Inspect merchandise for compliance with the importer's quality control standards, and

6. Handle all export requirements in regard to transportation and documentation for the merchandise.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

F4

You state that payment for the merchandise to be imported and payment of the commission are accomplished in the following manner: when an order is placed with a factory and the amount of the sale is known, your client will open a letter of credit payable to the Taiwan company in that amount. The Taiwan company will pay the factory by a local letter of credit that is for the same amount that the Taiwan company received from your client. Although the invoices from the factory will be addressed to the Taiwan company, the merchandise will be marked for shipment directly to your client. Moreover, the invoice from the Taiwan company to your client will be for the same amount as the invoice from the factory to the Taiwan company. Your client will pay monthly amounts to the Taiwan company for the services which it performs and no portion of these amounts will be remitted to the foreign manufacturers.

Based upon your description of the services which the Taiwan company will perform on behalf of your client and of the manner in which payment for the imported merchandise to the foreign manufacturers will be accomplished, it is our opinion that amounts paid by your client to the Taiwan company for the services rendered by the latter constitute bona fide buying commissions. As you know, buying commissions are not included as part of transaction value under section 402(b) of the TAA.

Sincerely,

(Signed) Harvey B. Fox

SUBJECT: Internal Advice No. 107/84; Valuation of Automobile Engines Purchased by Chrysler Corp. from Peugeot

This refers to your letter of September 14, 1984, received in this office on November 11, 1984, which forwarded the above-referenced internal advice request initiated by Chrysler Corporation (the importer). The issue presented for consideration concerns whether amounts paid by the importer to the manufacturer, Peugeot S.A. of France, a related company, for failure to purchase a contracted minimum quantity of engines are dutiable as part of transaction value, section 402(b) of the Tariff Act of 1930, as amended by the Trade Agreements Act of 1979 (TAA).

The record reflects that the importer and the manufacturer entered into a contract for the purchase of diesel engines and a contract for the purchase of gasoline engines with respect to model years 1983 through 1985. Both contracts provide that a minimum quantity of engines shall be purchased by the importer for each year of the contract. If the minimum number of engines is not purchased during a particular year, the contracts state that the importer shall pay the manufacturer additional compensation equal to a certain amount for each engine below the contracted minimum quantity that is not purchased. The contracts further provide that if purchases exceed a certain quantity during the life of the agreements, the importer shall receive a "special volume discount," payable within 60 days after that quantity is purchased.

During the 1983 model year, the importer purchased no diesel engines and fewer than the specified minimum quantity of gasoline engines. As a result, the importer was required by the contracts to pay the manufacturer certain additional compensation the precise amount of which was subsequently determined pursuant to a settlement agreement between the parties dated February 21, 1984.

F6

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

Counsel for the importer refers to the additional compensation as "liquidated damages" and maintains that these amounts are not part of the price actually paid or payable for the imported merchandise under several alternative theories. First, counsel contends that because the additional amounts were paid in connection with engines that were never sold or imported, these amounts are not dutiable as they do not relate to the engines that were imported. Counsel also maintains in this regard that the specific pricing formula set forth in the contracts for engines which were imported was separate from the liquidated damages contractural provision which related only to engines that were not purchased. Secondly, counsel states that even assuming that the additional payments affect the price of the imported merchandise, the payments must be disregarded since they represent changes to the price which are arrived at subsequent to the time of importation. Counsel points out in this connection that the Statement of Administrative Action relating to the TAA provides as follows:

> Changes in a price actually paid or payable which are arrived at subsequent to the time of importation shall not be taken into account in determining a transaction value.

Your office agrees with the importer's position that the additional compensation is not part of transaction value. In the opinion of your office, the additional payments are "not attributable to any particular importation" but, rather, they accrue "on the non-importation of merchandise." Moreover, according to your office, the subject compensation appears to be "simply a contractural obligation that is separate and distinct from the import transaction."

The Chief, Commercial Operations Branch I, New York Seaport, points out in a memorandum of October 31, 1984, that because the record before us does not address the issue of the acceptability, under section 402(b)(2)(B) of the TAA, of the transfer prices between the related parties, transaction value has not been established. Concerning the compensation paid to the manufacturer due to the failure of the importer to purchase the contracted minimum quantity of gasoline engines, the Chief of the Commercial Operations Branch I concludes that these amounts are part of the dutiable value of the imported merchandise under section 402(f) of the TAA. This conclusion is based upon the following analysis:

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

543445

> The base selling price of the engines is subject to adjustments. All these adjustments are based upon delivery dates and numbers purchased. It is our opinion that these are not transfer prices or estimates envisioned by TAA #25; nor can these adjustments be termed 'retroactive.' It is our opinion that the price paid or payable is arrived at in terms of the full value of the three-year contract and is not divisible in terms of invoice unit values.

We note initially that your office has not raised or otherwise addressed the issue of the acceptability of the transfer prices between the related parties in this case. As there is insufficient information in the record for us to make a determination regarding this issue, we will assume, for purposes of this decision, that your office is satisfied that the agreements between the parties reflected arms-length negotiations and, therefore, that the transfer prices are acceptable within the meaning of section 402(b)(2)(B) of the TAA.

As you are aware, the words "price actually paid or payable" in the definition of transaction value are themselves defined in section 402(b)(4)(A) of the TAA as:

> ... the total payment (whether direct or indirect ...) made, or to be made, for imported merchandise by the buyer to, or for the benefit of, the seller.

We believe it is significant that the gasoline purchase agreement refers to a "base selling price," which is the unit price reflected on the invoices that accompanied the engine shipments to the United States. As explained earlier, the agreement provides that if the importer fails to purchase the specified minimum quantity of engines in any given model year, the importer shall pay the manufacturer, in addition to the "base selling price," "a compensation amounting to" a certain amount for each engine below the specified minimum quantity that is not purchased during that model year. In our opinion, the term "base selling price" clearly implies that it is not a firm price but is subject to certain adjustments such as the additional compensation required in the event the minimum quantity of gasoline engines is not purchased. Thus, the agreement essentially provides that the

543445

F8

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

final unit purchase price for the engines that are purchased during a model year will not be known until the the number of engines actually purchased during that year is known. This conclusion recognizes that in many business transactions the quantity of merchandise purchased is a significant factor in the determination of the unit price for that merchandise.

Consequently, while the additional compensation required as a result of the importer's failure to purchase the contracted minimum quantity of engines was computed on the basis of a specific amount for each engine below the minimum quantity that was not purchased, we believe that, for the reasons explained above, there is a direct relationship between this additional compensation and the gasoline engines that were purchased (and imported). Therefore, we conclude that the additional compensation required in connection with the purchase of gasoline engines during the 1983 model year is properly part of the price actually paid or payable for the imported gasoline engines.

We also disagree with the alternative argument advanced by counsel for the importer that the additional compensation must be disregarded since it represents a change in the price which was arrived at after the merchandise was imported. We have consistently held in this regard (see TAA #47 and rulings dated September 13, 1984 (543358), and March 30, 1984 (543252)), that where the buyer and seller agree, prior to exportation of the merchandise, to a fixed formula pursuant to which adjustments, either upward or downward, are to be made to the invoice price, those adjustments will be taken into consideration in determining the price actually paid or payable. The "base selling price" and the adjustments thereto set forth in the gasoline purchase agreement clearly were agreed to prior to exportation of the engines to the United States.

However, it is also clear that the settlement agreement was entered into subsequent to the importation of the gasoline engines during the 1983 model year. As we have no reason to believe that the parties did not view the pricing formula set forth in the purchase agreement as representing a fixed formula at the time the agreement was executed, we believe that a price determined in accordance with that formula constitutes the "price actually paid or payable for the merchandise when sold for exportation to the United States." (Emphasis added; see TAA #48). Thus, the amount of

543445

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

F9

the additional compensation to be included in transaction value should be calculated on the basis of the provisions of the gasoline engine purchase agreement rather than on the basis of the provisions of the settlement agreement. This amount should be apportioned equally over the number of engines actually imported during the 1983 model year.

In regard to the amounts that were paid by the importer to the manufacturer in connection with the failure of the importer to purchase any diesel engines during the 1983 model year, we agree with counsel for the importer that these amounts are not dutiable inasmuch as the diesel engines were subject to a separate purchase agreement and none were, in fact, imported.

Harvey B. Fox

SUBJECT: Internal Advice No. 113/84; Valuation of Automobile Engines Purchased by Chrysler Corp. from Mitsubishi

This is in reference to your memorandum of October 3, 1984, received in this office on November 28, 1985, which forwarded the above-referenced internal advice request initiated by Chrysler Corp. (the importer). The issue under consideration concerns whether amounts paid by the importer to the seller, Mitsubishi Motors Corporation of Japan, a related company, as a result of the importer's failure to purchase a contracted minimum quantity of engines are dutiable as part of transaction value, section 402(b) of the Tariff Act of 1930, as amended by the Trade Agreements Act of 1979 (TAA).

The facts are that in 1975 the importer and manufacturer entered into an engine purchase agreement which provided that the importer would purchase a specified minimum quantity of engines for each model year from 1981 through 1985. If the importer failed to purchase the minimum quantity during any one of those model years, the agreement required the importer to pay the seller liquidated damages equal to 22 percent of the engine price in effect on March 1 of the applicable model year "multiplied by the number by which (the importer's) purchases of engines is less than" the minimum quantity for that year. According to the agreement, the 22 percent figure consists of a 4 percent non-reimbursable amount and an 18 percent amount which would be repaid by the seller in subsequent years to the extent that the importer purchased more than the minimum number of engines in those later years.

Because the importer did not purchase the minimum number of engines during the 1981 model year, it was required to pay the seller in excess of $9 million in liquidated damages. In the opinion of your office, the unit price reflected in the invoices which accompanied the engine shipments to the United

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

States was based on a quantity discount given in anticipation of purchases of a specified minimum quantity. Consequently, when the importer failed to qualify for this discount price, additional payments became due as provided for in the purchase agreement. Generally speaking, your office believes that these additional payments are dutiable as part of transaction value. However, you indicate that if the 18 percent reimbursable amount is subsequently repaid by the seller, that amount should not be dutiable.

Counsel for the importer contends that the liquidated damage payments are not part of the price actually paid or payable for the imported merchandise for the reason that these payments relate to engines that were not purchased rather than to engines that were purchased and imported. Counsel further maintains that a review of the agreement itself indicates that the parties did not intend for the liquidated damages to be part of the price paid or payable for the engines. Counsel states in this regard that Part 3 of the agreement, entitled "Prices and Payment," sets forth the actual pricing for the engines while Part 2, a totally separate provision from the pricing portion of the agreement, provides for the payment of damages in the event minimum quantities are not purchased. Finally, counsel states that even assuming the additional payments do affect the price of the imported engines, "the holding of TAA #48 make it clear that subsequent adjustments to prices originally thought to be firm do not alter the transaction value estimated on the actual unit sale prices."

The Chief, Commercial Operations Branch I, New York Seaport, believes that both the reimbursable and non-reimbursable liquidated damage payments are part of dutiable value since the various provisions in the agreement providing for the payment of compensation from the importer to the seller assure the seller's "recovery of the cost of producing the engines plus a profit commensurate with the production run." However, the Chief, Commercial Operations Branch I, indicates that "the price paid or payable is arrived at in terms of the full value of the (multiple-year) contract and is not divisible in terms of invoice unit values."

As you know, the words "price actually paid or payable" in the definition of transaction value are themselves defined in section 402(b)(4)(A) of the TAA as:

> ... the total payment (whether direct or indirect ...) made, or to be made, for imported

543456

F12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

merchandise by the buyer to, or for the benefit of, the seller.

We believe that the following provision of the engine purchase agreement is pertinent to a determination of whether the additional compensation paid as a result of the failure of the importer to purchase the minimum quantity of engines during the 1981 model year is part of the purchase price of the imported engines:

> In the event that (the importer) fails to purchase the minimum number of Engines set forth above, because of the major investment in plant and equipment which (the seller) must make in order to produce the Engines required by this Agreement, the improbability of finding alternative purchasers for the Engines specially manufactured, ... and in light of the uncertainty in determining the profits which (the seller) would have made and the costs and incidental damages which (the seller) would have avoided but for such failure, the parties have considered and agreed that, as an essential condition to (the seller's) willingness to sell Engines at the prices provided for herein, the following payments, representing fair and reasonable compensation for (the seller's) anticipated losses, will be made by (the importer) to (the seller) as liquidated damages and not as penalties with respect to the number of units by which (the importer's) purchases of Engines with respect to any model year are less than the minimum quantities specified above ....

As you point out in your October 3, 1984, memorandum, it is clear from the underscored portion of the above-quoted provision that the invoice unit price for the imported merchandise was established based on the premise that the minimum quantity of engines would be purchased. Of course, if this premise proved to be incorrect, the agreement required the importer to pay the seller certain amounts as liquidated damages in addition to the invoice unit values. Thus, the agreement essentially created a pricing formula pursuant to which a base price (the invoice unit price) for the imported merchandise was established which was subject to an upward adjustment at the end of the model year to the extent that the importer's actual purchases during the year were less than the specified minimum quantity. This construction recognizes that in many business transactions the quantity of merchandise purchased is a significant factor

543456

F13

RELEASED TO THE

in the determination of the unit price for that merchandise.

Consequently, while the additional compensation paid as a result of the importer's failure to purchase the contracted minimum quantity of engines was computed on the basis of a specific amount for each engine below the minimum quantity of engines that was not purchased, we believe, for the reasons explained above, that there is a direct relationship between this additional compensation and the engines that were purchased and imported during the 1981 model year.

We also disagree with the alternative argument advanced by counsel for the importer that the additional compensation must be disregarded since it represents a change in the price which was arrived at after the merchandise was imported. We have consistently held in this regard (see TAA #47 and rulings dated September 13, 1984 (543358), and March 30, 1984 (543252)), that where the buyer and seller agree, prior to exportation of the merchandise, to a fixed formula pursuant to which adjustments, either upward or downward, are to be made to the invoice price, those adjustments will be taken into consideration in determining the price actually paid or payable. The invoice unit price and the adjustments thereto set forth in the purchase agreement in this case clearly were agreed to prior to exportation of the engines to the United States.

We understand that in regard to certain model years subsequent to 1981, the importer purchased in excess of the minimum quantity requirements and, as a result, the seller has repaid most, if not all, of the reimbursable liquidated damages paid by the importer in connection with purchases during the 1981 model year. Generally speaking, in situations in which the price paid or payable is determined by application of a formula which is agreed to by the parties prior to exportation of the merchandise, we believe that, in view of the one-year statutory liquidation period, the final purchase price for the merchandise should be ascertainable within one year of the date of entry. In other words, the one-year statutory liquidation period should not be extended in regard to a particular entry soley to enable an adjustment to be made to the invoice price pursuant to an agreed-upon pricing formula. While the repayments of the reimbursable liquidated damages in this case apparently were made more than one year after the dates of entry of the subject imported engines, it is our opinion that these repayments should be taken into consideration in appraising the engines

543456

F14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

imported during the 1981 model year since liquidation of the affected entries has been suspended pending resolution of this internal advice request.

Based on the foregoing, we conclude that the additional compensation paid by the importer to the seller as a result of the former's failure to purchase the contracted minimum quantity of engines during the 1981 model year is properly part of the price actually paid or payable for the engines purchased and imported into the United States during that model year. This additional compensation, which includes both the 4 percent non-reimbursable amount as well as that portion of the 18 percent reimbursable amount which has not been repaid to the importer as of the date of this decision, should be apportioned equally over the number of engines actually imported during the 1981 model year.

APR 1 1985

Mr. Subash Agarwal
Director - Customs Department 733X
Sears, Roebuck & Company
Sears Tower
Chicago, Illinois 60684

Dear Mr. Agarwal:

This refers to your letter of December 18, 1984, requesting a ruling on the dutiability of certain royalty and commission payments on shoes imported from Korea under the following circumstances.

Sears has contracted for the purchase of children's jogging shoes with the "Go-Bots" name, manufactured by Kukje Corporation, Korea, at an F.O.B. Korea price of $5.10 per pair. Sears agreed to pay Chadwick Industries (located in the U.S.) a royalty of 10 percent (51¢ per pair) for the use of the "Go-Bots" trade name, and a commission of 10 percent directly. This commission represents Chadwick's fee to Sears for development and styling of the shoe, and also includes Chadwick's profit. Chadwick is a licensee of the trademark owner, also a U.S. Company. Chadwick, Sears, and Kukje are not related.

Chadwick does import the same shoe from different manufacturers, mostly from sources other than Kukje, and offers them for sale in the United States, either as a principal or in an arrangement similar to that with Sears. However, in the Sears transactions, Chadwick has none of the risks associated with that of a principal. It merely charges a fee for development of the shoe, which includes a profit, and another fee for use of the "Go-Bots" name. Sears assumes all the risks of a buyer.

Through its offices in Korea, Sears conducts the liaison work with the manufacturer to arrange for the transfer of funds and for shipment of the merchandise.

Kukje is a long-standing supplier of shoes to Sears. In fact, Sears insisted to Chadwick that Kukje be the manufacturer of these shoes due to their long-standing business relationship and Sears' satisfaction with Kukje's quality levels, notwithstanding the fact that Kukje's prices were higher than prices Chadwick could have obtained from other manufacturers. Sears was aware of that fact.

Chadwick negotiated the F.O.B. price in conjunction with Sears, with the understanding that certain royalties and commissions would be paid to Chadwick. Chadwick does not share any portion of the commission or royalty fees with Kukje.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

G2

543467

You contend that neither the royalty nor the commission is dutiable. The royalty is non-dutiable because it is payable to an unrelated third party for the right to sell "Go-Bots" shoes and is not a condition of the sale of such shoes by the manufacturer to Sears.

The commission is non-dutiable because Chadwick is not related to the manufacturer, is neither controlled by nor works on behalf of the manufacturer, and does not share any of its commissions with the manufacturer. The commission is not a selling commission and therefore should not be considered as an addition to the price paid or payable to the manufacturer.

Furthermore, Chadwick should not be considered as a "seller" in this transaction because it does not assume any of the risks normally borne by a seller in a buyer/seller relationship.

You also contend that this commission is not a buying commission because Chadwick provides no agent services to Sears other than what they did on Sears' behalf to arrive at a final negotiated price. You describe the commission as being consideration for developing the idea of a "Go-Bots" shoe into a marketable product, and you analogize the fees to development, design and/or marketing fees, expenses which Sears would have had to undertake to develop, promote, and sell the product in the United States. Such "selling expenses" are considered to be non-dutiable.

Under the foregoing circumstances, we agree that the royalties and commissions are not part of transaction value, for the reasons you present.

Sincerely,

(Signed) Harvey B. Fox

DEPARTMENT OF THE TREASURY - U.S. CUSTOMS SERVICE CORRESPONDENCE APPROVAL AND CLEARANCE

APR 15 1985

CLA-2 CO:R:CV:V
543498 MK

District Director of Customs
Seattle, Washington 98174

Dear Sir:

Re: Application for Further Review of Protest No. 3002-4-000002, dated January 16, 1984

This protest was filed against your appraisement of a shipment of canned mushrooms sent from the Peoples Republic of China (PRC) to Universal Products (Impex), Ltd. (UPL) of Hong Kong, which sold the merchandise to the importer, Nature's Farm Products, Inc.

You appraised the merchandise under transaction value, represented by the invoice price from UPL to the importer, less ocean freight from Hong Kong to the United States. The invoice price included ocean freight from the PRC to Hong Kong and related handling charges.

The importer's customhouse broker contends that the merchandise should have been appraised at invoice value less freight, insurance, and related charges from the PRC to Hong Kong, as well as the freight from Hong Kong to the United States.

Section 402(b)(4)(A) excludes from the price actually paid or payable any costs, charges, or expenses incurred for transportation, insurance, and related services, incident to the international shipment of the merchandise from the country of exportation to the United States.

The issue is whether the country of exportation was the PRC or Hong Kong.

In TAA #57 we ruled that when there are two or more transactions which might give rise to a transaction value, the one which most directly causes the merchandise to be exported to the United States is the one to be used in determining transaction value. Clearly, here the transaction which most directly caused the merchandise to be exported to the United States was the sale from UPL to the importer. In fact, that is the only sale which is documented in the file. There is no information at all concerning the transaction that caused the merchandise to be exported from the PRC to Hong Kong, and no evidence that at the time of that exportation the merchandise was destined for the United States.

543498

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

G4

The invoice price from UPL to the importer included itemized charges for ocean freight, insurance and related costs from the PRC to Hong Kong. We conclude that the invoice price, deducting therefrom only the ocean freight from Hong Kong to the United States, represents transaction value.

Please deny the protest in full and send the protestant a copy of this decision with your notice of action on the protest.

Sincerely,

(Signed) Harvey B. Fox

FROM : Director, Classification and Value Division

SUBJECT: Request for Internal Advice With Regard to Transactions Between a Parent Corporation in Canada and its Subsidiary in the United States

This is in reference to your memorandum requesting advice on the proper valuation of certain roofing material imported to the United States from Canada. The merchandise is manufactured in Italy by Polyglass S.P.A., and exported to Ciro Roofing Products of Canada Limited in Vancouver, B.C., Canada, (hereinafter parent corporation; seller). The merchandise is then allegedly sold to Ciro Roofing Products U.S.A., Inc., a subsidiary of Ciro-Canada, located in Bothell, Washington, with its principal office in Reno, Nevada, (hereinafter referred to as subsidiary, buyer). The consignee is Georgia-Pacific Corporation with offices in Woodinville, Washington, and various other locations throughout the United States.

The parent corporation states that its subsidiary receives purchase orders from the consignee. Merchandise is supplied to the consignee from the subsidiary's Chicago plant where a portion of the merchandise is manufactured. When this stock is not available, it is alleged that the merchandise is supplied by the parent corporation. If the merchandise is available, it is allegedly sold by the parent corporation to the subsidiary at cost plus a 7 percent markup to cover expenses. The consignee then pays the subsidiary. Payment by the subsidiary is subsequently remitted to the parent corporation. Accounting for both the Canadian and the U.S. office is done in Canada, although separate books and bank accounts are maintained. It is further alleged that sales from the parent to the subsidiary are F.O.B. Vancouver, in U.S. funds. The subsequent sale between the subsidiary and the consignee is F.O.B. Seattle, Washington, and includes Customs duties, brokerage, and a markup for general expenses and profit.

It is alleged that the proper method of valuation in this case is transaction value under section 402(b) of the Tariff Act of 1930, as amended by the Trade Agreements Act of 1979 (TAA), as represented by the sale price between the parent corporation and the subsidiary. The parent corporation indicates that this is proper, even though the parties are related, and relies upon section 402(b)(2)(B) which states:

G6

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

> The transaction value between a related buyer and seller is acceptable... if an examination of the circumstances of the sale of the imported merchandise indicates that the relationship between such buyer and seller did not influence the price actually paid or payable; or if the transaction value of the imported merchandise closely approximates —
>
> (i) the transaction value of identical merchandise, or of similar merchandise, in sales to unrelated buyers in the United States; ....

It is further alleged that the value of the merchandise in question is actually higher than that of identical merchandise. Thus, the proper method of valuation is allegedly transaction value, i.e., the price actually paid or payable for the imported merchandise between the parent corporation and the subsidiary.

The issue in this case is whether the transactions between the parent corporation and its subsidiary, constitute bona fide sales. We agree with your conclusion that the transactions do not constitute bona fide sales as alleged.

The transaction value of imported merchandise is defined in section 402(b) as "the price actually paid or payable for the merchandise when sold for exportation to the United States," plus amounts for the items enumerated in section 402(b)(1). Therefore, the "price actually paid or payable" must be derived from an actual sale. The word "sale" generally is defined as a transfer of ownership in property from one party to another for a price or other consideration. See J. L. Wood v. United States, 62 CCPA 25, C.A.D. 1129 (1974), and J. H. Cottman & Co. v. United States, 20 CCPA 344, T.D. 46114 (1932).

The evidence in the instant case indicates that the subsidiary does not act as an independent entity. For example, telephone calls placed to the phone number of the subsidiary are automatically rerouted to the parent corporation, and answered by staff of the parent corporation. There is evidence available which indicates that on more than one occasion, the parent invoiced its subsidiary and the ultimate purchaser at the same time for the same order, with payment to be made directly from the ultimate purchaser to the parent. In this situation, it is clear that there was no transfer of ownership in property between the parent and the subsidiary, but rather, the transfer of ownership occurred between the parent corporation and the ultimate U.S. purchaser. In the situation where the ultimate purchaser does in fact pay the subsidiary for the merchandise, there is no evidence which indicates that the subsidiary retains any profit prior to remitting the funds to the parent corporation.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

G1

54354

In light of the facts and circumstances viewed in their entirety, we agree with your position that the proper method of appraisement is transaction value, as represented by the price actually paid or payable for the imported merchandise by the ultimate U.S. purchaser.

27 AUG 1985 CLA-2 CO:R:CV:V
543551 CW

John B. Pellegrini, Esq.
Ross & Hardies
220 East 42nd Street
New York, New York 10017

Dear Mr. Pellegrini:

This is in response to your letter of May 22, 1985, in which you request a ruling on behalf of Enro Shirt Company concerning the dutiability under transaction value, section 402(b) of the Tariff Act of 1930, as amended by the Trade Agreements Act of 1979 (TAA), of certain purchasing expenses.

You state that your client presently purchases various articles of wearing apparel from factories located principally in the Far East. Under current procedures, the factories use fabric purchased from suppliers designated by your client at prices determined by negotiations between your client and the fabric suppliers. The invoice price between each factory and your client for imported merchandise consists of a negotiated price encompassing the cut, make and trim (CMT) operation as well as the purchase price of the fabric plus a markup. The CMT charges include the cost of materials and components (other than fabric) which are purchased directly by the factories.

Your client proposes to restructure these arrangements so that the price negotiated between your client and the factories is limited to the cut, make and trim operation. The factories would be reimbursed at cost for the purchase of the fabric and the purchase orders from your client to the factories would separately reflect the CMT charges and the reimbursement for fabric. Your client further proposes to enter into a separate service agreement with each factory pursuant to which your client would compensate the factories for services rendered in connection with the purchase of fabric. These services would include checking production, scheduling delivery, and inspection. The compensation to the factories for performing these services would be a percentage of the purchase price of the fabric. You also indicate that the amounts due under the service agreement would be paid on a periodic basis rather than against particular shipments of imported merchandise.

G9

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

In your opinion, if the proposed procedure is implemented, the price paid or payable for the imported articles would consist of the sum of the CMT charges and the reimbursement cost of the fabric. The amounts which would be paid to the factories pursuant to the service agreements for services rendered in connection with the purchase of fabric would not, in your opinion, form part of the price paid or payable for the merchandise. You state that the proposed transaction described in your request is similar in all material respects to the arrangement described in TAA #52 dated September 21, 1982 (542831). We concluded in that ruling that:

> ... the payments which would be made pursuant to the service agreement would not be directly related to the imported merchandise. Payments would be made periodically and not tied to the sale for exportation of any specific merchandise. Accordingly, we find that the payments in question would not be part of the "price actually paid or payable," and, therefore, would not be part of the transaction value of the merchandise.

We agree with you that our holding in TAA #52 is controlling with respect to the proposed transactions described in your letter. Therefore, assuming that the arrangement described in your letter is implemented, we believe that payments from your client to the factories pursuant to the service agreements would not form part of the transaction value of the imported merchandise.

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If this letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

(Signed) J. T. Roth

CLA-2 CO:R:CV:V
543556 CW

S. Richard Shostak, Esq.
Stein Shostak Shostak & O'Hara
3580 Wilshire Boulevard, Suite 1240
Los Angeles, California 90010

Dear Mr. Shostak:

This refers to your letter of June 7, 1985, with enclosures, on behalf of Ford Motor Company. You request a ruling on the dutiable status of certain capital equipment used in producing automobile parts in Canada for Ford, and the applicability, if any, of our ruling in C.S.D. 83-3.

In the instant situation, Ford paid the manufacturer to have a third party manufacture tools for Ford, which at all times retained title to and ownership of the tools. The Canadian manufacturer then used the tools free of charge to manufacture the parts for Ford. Documents you enclosed substantiate these facts.

C.S.D. 83-3 involved certain valves which an importer contemplated having manufactured abroad. The manufacturer would build special tools for this purpose and the importer would reimburse the manufacturer for the cost of manufacturing the tools.

In our ruling, we referred to the statutory definition of the term "assist" contained in section 402(h)(1)(A) which provides in part that:

> (1)(A) The term 'assist' means any of the following if supplied directly or indirectly, and free of charge or at reduced cost, by the buyer of imported merchandise for use in connection with the production or the sale for export to the United States of the merchandise:
>
> * * *
>
> (ii) Tools, dies, molds, and similar items used in the production of the imported merchandise.

We then concluded that the tools in question would not come within the statutory definition of "assists" because they would not be supplied by the buyer. Instead, the importer's proposed reimbursement of the manufacturer would be dutiable as part of the price actually paid or payable for the imported merchandise.

Customs officers at Champlain determined that C.S.D. 83-3 was controlling in this case, whereas you contend that there are substantial differences between the facts in that decision and those you present.

G11

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

You point out that in the prior case the manufacturer made the tools, but the record was wholly silent regarding their ownership. You contend that the ruling in C.S.D. 83-3 is correct if, but only if, the ownership of the tools remained with the manufacturer. If the importer owned the tools, they were assists, the cost of which could be amortized.

You further contend that the tools in issue come squarely within the statutory definition of the term "assists." They are purchased separately by the importer and are manufactured by a third party, are owned by the importer of the product being manufactured therewith and are not part of the price paid to the manufacturer for the imported merchandise. The tools belong to the importer-purchaser, were given free of charge to the manufacturer to manufacture the goods being purchased, and are subject to return to the purchaser upon request.

In C.S.D. 83-3, it was implied, though not specifically stated, that the manufacturer would own the tools. We agree with you that the facts in that ruling are distinguishable from those you present, wherein the importer paid a third party to manufacture the tools and retained title to them. Under these circumstances, the tools come within the statutory definition of assists and their costs can be amortized under generally accepted accounting principles.

We are sending a copy of this decision at the District Director at Champlain for his information and future guidance.

Sincerely,

(Signed) J. T. Roth

Mr. Ralph S. Kilp
John V. Carr & Son, Inc.
P.O. Box 479-A
Detroit, Michigan 48232-0479

Dear Mr. Kilp:

This is in response to your letter of July 10, 1985, in which you request a ruling concerning the dutiability of certain engineering work produced in the United States. You state that your company represents a number of Canadian firms which manufacture tools for export to the United States. In producing the tools, these firms frequently purchase the required design and engineering work from outside vendors, both in Canada and the United States.

While you believe that the cost of the purchased engineering obtained in Canada is undoubtedly part of the dutiable value of the tools, you ask whether the cost of the purchased engineering work obtained in the United States is also dutiable.

We are assuming, for purposes of your request, that transaction value, the primary basis of appraisement under the valuation statute, section 402 of the Tariff Act of 1930, as amended by the Trade Agreements Act of 1979 (TAA), is applicable to the imported tools. We are also assuming that the tool manufacturers do not obtain the engineering work at reduced cost.

Transaction value essentially is defined in section 402(b) of the TAA as the price actually paid or payable for the imported merchandise when sold for exportation to the United States. Thus, the cost of design and engineering work purchased by a Canadian seller from vendors in the United States or Canada is dutiable only to the extent that that cost is included in the price actually paid or payable for the imported tools by the importer to the Canadian seller. If, for some reason, the cost of the design and engineering

Mr. Richard Moreland
Director, Countervail Compliance
Import Administration
International Trade Administration
Department of Commerce
Washington, D.C. 20230

Dear Mr. Moreland:

By letter of June 10, 1985 (copy enclosed), R. Brian Burke, Esq., representing the M. I. Group of Manhattan Industries, Inc., requested a ruling from this office concerning the manner in which the Customs Service determines the "ad valorem value" of wearing apparel subject to a countervailing duty order for purposes of ascertaining the amount of estimated countervailing duties which must be deposited pursuant to Section 706(a)(3) of the Tariff Act of 1930, as amended (U.S.C. 1671e(a)(3)). It is our opinion, for the reasons set forth below, that the issue raised by Mr. Burke should properly be addressed by your office.

Mr. Burke specifically refers to a a final affirmative countervailing duty determination and order, published as a notice in the Federal Register on March 12, 1985 (50 FR 9826), relating to certain textile mill products and apparel from Sri Lanka. The notice provides that the "... estimated net bounty or grant for duty deposit purposes is ... 3.06 percent ad valorem for apparel" and directs the Customs Service "... to require a cash desposit in the amount indicated above for each entry of the subject merchandise from Sri Lanka ... and to assess countervailing duties in accordance with sections 706(a)(1) and 751 of the Act."

According to Mr. Burke, his client (hereinafter referred to as "importer") plans to purchase certain wearing apparel from a Hong Kong company which will place an order for the apparel with a related manufacturer in Sri Lanka. The merchandise produced by the manufacturer will be shipped directly to the importer in the United States and will be accompanied by an invoice prepared by the manufacturer which will reflect the F.O.B. Sri Lanka price. A second invoice relating to this transaction will be prepared by the Hong

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

A3

Kong company and will reflect the costs it incurred in processing the order plus its usual profit on the transaction. The importer will pay both invoices.

Counsel contends that when his client's wearing apparel is imported from Sri Lanka, the amount of the cash deposit to be required by the Customs Service as representing estimated countervailing duties should be calculated based only on the Sri Lanka manufacturer's invoice price, and that the Hong Kong company's invoice should not be included in this calculation. Mr. Burke bases this contention on the fact that, pursuant to section 303(a)(1) of the Act (19 U.S.C. 1303) and section 702(a)(1) of the Act, the countervailing duty to be imposed in connection with the importation of merchandise subject to a final affirmative determination and order shall equal the net amount of the "bounty or grant" that was paid or bestowed. Counsel points out in this regard that as the Government of Sri Lanka confers its bounty or grant upon the Sri Lankan manufacturer, and your office calculates the estimated amount of the net bounty or grant, in percentage terms, based upon the F.O.B. Sri Lanka prices, the amount of the cash deposti should also be based upon the F.O.B. Sri Lanka prices.

As noted earlier, the referenced Federal Register notice provides that the "... estimated net bounty or grant for duty deposit purposes is ... 3.06 percent ad valorem for apparel." We understand that written instructions issued to the Customs Service pursuant to this order utilize this same language. In the absence of language indicating a contrary intention, this agency interprets the words "3.06 percent ad valorem" to mean that this percentage should be applied against the appraised value of the imported merchandise, as determined in accordance with the valuation statute, section 402 of the Tariff Act of 1930, as amended by the Trade Agreements Act of 1979 (19 U.S.C. 1401a).

On the basis of Mr. Burke's description of the prospective transactions involving his client, it is our opinion that the appraised value of the subject wearing apparel would include the amounts reflected on both the manufacturer's invoice and the Hong Kong company's invoice. Consequently, in calculating the amount of the cash deposit to be required, pursuant to the referenced Federal Register notice, for wearing apparel imported by Mr. Burke's client, this agency will apply the 3.06 percent against the full

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

543559

appraised value of the merchandise.

The Customs Service, of course, is without authority to require a cash deposit of estimated countervailing duties in any amount other than that which is specified in the final affirmative countervailing duty order. Therefore, to the extent that you may agree with Mr. Burke that requiring a cash deposit for his client's importations based upon the full appraised value of the merchandise would be inconsistent with sections 303(a)(1) and 702(a)(1) of the Act, we suggest that your office may wish to consider an amendment to or a clarification of the instructions to this agency concerning the amount of the cash deposit to be required for such importations.

We have notified Mr. Burke that his letter has been forwarded to your office for consideration of the issue raised therein. If you have any questions concerning this matter, please contact Craig Walker of this office at 566-2938.

Sincerely,

(Signed) Harvey B. Fox

CLA-2 CO:R:CV:V
543581 CW

Mr. Randall F. Andrews
Industrial and Agricultural Chemicals Inc.
Route 2, Box 521-C
Red Springs, North Carolina 28377

Dear Mr. Andrews:

This is in reference to your letter of May 13, 1985, to the Area Director of Customs, New York Seaport, concerning the dutiable status of copper ammonium acetate from Canada. You advised that your company is obtaining this product free of charge. In his response to you of June 24, 1985, the Area Director stated that your letter was being referred to Headquarters for consideration of the issue of the dutiable value of the subject merchandise.

As you are probably aware, the primary basis of valuation for imported merchandise is transaction value, which is defined in section 402(b) of the Tariff Act of 1930, as amended by the Trade Agreements Act of 1979 (TAA), as "the price actually paid or payable for the merchandise when sold for exportation to the United States, plus amounts" for certain specified items to the extent they are not already included in that price. Although you are obtaining the copper ammonium acetate free of charge, it is clear that the product has some value when it arrives in the United States. Consequently, since there is no "price actually paid or payable" for the merchandise, transaction value cannot be determined and is eliminated as the basis of appraising the merchandise.

Under these circumstances, the valuation statute provides that the appraised value shall be determined by proceeding sequentially through the alternative bases of appraisement to the first such basis that can be determined. These alternative bases, listed in order of precedence for use, are: transaction value of identical or similar merchandise, section 402(c) of the TAA, deductive value, section 402(d), and computed value, section 402(e).

Sincerely,

(Signed) J. T. Rozh

1/85

CORRESPONDENCE APPROVAL AND CLEARANCE

CLA-2 CO:R:CV:V
10 SEP 1985 543600 CW

Mr. Mort Weissman
Senior Vice President
Heloros Watches Inc.
330 West 34th Street
New York, New York 10001

Dear Mr. Weissman:

This is in response to your letter of July 16, 1985, in which you inquire concerning the dutiability of freight charges involved in the shipment of watch bracelets from Hong Kong to your subsidiary company, located in the United States Virgin Islands.

As we understand the facts involved in these transactions, watch bracelets purchased from a Hong Kong supplier by your subsidiary in the Virgin Islands are shipped from Hong Kong to your subsidiary's plant in the Virgin Islands where they are assembled with movements, dials and cases. You indicate that upon importation of the assembled articles into the United States, your company pays duty on the cost of the bracelets only, which includes the freight charges involved in shipping the bracelets from Hong Kong to the Virgin Islands. You maintain that the inclusion of these freight charges in dutiable value is "unfair" considering that when you import bracelets directly to the United States from Hong Kong, ocean freight charges are not included in dutiable value.

The primary basis of appraisement for imported merchandise under the valuation statute, section 402 of the Tariff Act of 1930, as amended by the Trade Agreements Act of 1979 (TAA), is transaction value (section 402(b) of the TAA) which essentially is defined as the price actually paid or payable for the imported merchandise when sold for exportation to the United States. Section 402(b)(4)(A) of the TAA provides for the exclusion from "the price actually paid or payable," and, therefore, from transaction value, of expenses incurred in connection with the international shipment of the merchandise from the country of exportation to the United States.

Under the circumstances of this case, it is clear that the "country of exportation" of the imported assembled articles is the U.S. Virgin Islands and not Hong Kong. Thus, while section 402(b)(4)(A) permits the exclusion from the

A8

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

price actually paid for the imported assembled articles of those charges involved in shipping the assembled articles from the Virgin Islands to the United States, no such exclusion is permitted for the charges involved in shippng the bracelets from Hong Kong to the Virgin Islands. Of course, in those instances in which bracelets are shipped directly from Hong Kong to the United States, the country of exportation of the imported articles (i.e. bracelets) is Hong Kong and, therefore, the charges involved in shipping the bracelets from Hong Kong to the United States is deducible from the price actually paid or payable for the merchandise.

If you have any questions concerning the above explanation, please contact Craig Walker of this office at (202) 566-2938.

Sincerely,

(Signed) J. T. Roth

District Director of Customs
Chicago, Illinois 60607

Re: Decision on Application for Further Review of Protest No. 3307-5-000004

Dear Sir:

This protest was filed against your decision in the liquidation on January 4, 1985, of Entry No. 103084 dated November 5, 1984, covering a shipment of computer software.

Regarding the classification issue, companion hardware or software which is imported with its accompanying computer is classified as an entirety in the various data processing machine provisions, when it has been shown to form a complete article of commerce with the computer and will so be used.

The facts here indicate that this IDA-XP protocol analyzer is designed for complete, real-time emulation and analysis of high-level protocols (communications). Test pak software is separately packaged and is available as an option which provides additional protocols to analyze. As such, the purchasers may choose their own specific protocol which needs to be emulated and then analyzed. Such a process indicates that these test paks are not essential for the operation of the protocol analyzer itself.

Accordingly, we find that the protocol analyzer can function for its intended use without the optional test pak software. Thus, it is our determination that this software is classifiable separately under the provision for media recorded on magnetic tape or any medium other than wire in item 724.40, Tariff Schedules of the United States (TSUS). As such, this item is entitled to duty-free entry in item 960.65, TSUS. You are thus directed to accept this protest with regard to the classification issue.

The increase in value by 14 percent is also being protested by the importer. The protesting party contends that the goods in question are sold by Idacom Electronics, Inc. in Canada (seller; parent coporation) to their U.S. office in New Brunswick, New Jersey (buyer; subsidiary). It is alleged that the U.S. office increases the price by 14 percent in order to cover the cost of operation and profit, and that this increase is not returned to the Canadian office.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC.

A10

The first issue to be resolved is whether or not bona fide sales actually take place between these two related parties. We find no evidence indicating that the transactions do not represent bona fide sales. In J. L. Wood v. United States, 62 CCPA 1139 (1974), the court held that the term "sale" should be given its ordinary meaning, that being, "transfers of property from one party to another for consideration." Applying this definition to the instant case, we find that the transactions at issue constitute bona fide sales. The subsidiary appears to be a separate, legal entity. The parent corporation invoices the subsidiary for the merchandise, and payment is subsequently made back to the parent. The fact that the shipment of imported merchandise may be shipped from the foreign manufacturer to the ultimate consignee is a common business practice. Therefore, this is not viewed as evidence that there are no bona fide sales between the two related parties.

Secondly, the proper method of appraisement of the merchandise must be determined. In regard to transaction value, because the two parties are related, the following provision of section 402(b) of the Trade Agreements Act governs:

> The transaction value between a related buyer and seller is acceptable... if an examination of the circumstances of the sale of the imported merchandise indicates that the relationship between such buyer and seller did not influence the price actually paid or payable; or if the transaction value of the imported merchandise closely approximates --
>
> "(i) the transaction value of identical merchandise, or of similar merchandise, in sales to unrelated buyers in the United States;
>
> "(ii) the deductive value or computed value for identical merchandise or similar merchandise;...

The evidence in the instant case indicates that the relationship between the buyer and seller did in fact influence the price paid or payable for the merchandise. The price for the merchandise sold by the parent corporation to the subsidiary is 14 percent lower than the price paid by other purchasers. We have no information regarding transaction value of indentical or similar merchandise in sales to unrelated buyers or of the other "test values" enumerated above. Therefore, the price is not acceptable within the meaning of section 402(b)(2)(B) of the TAA.

A11

543615

Since in this case transaction value pursuant to section 402(b) cannot be determined, value should be determined by proceeding sequentially through the succeeding provisions enumerated in section 402(a)(1) of the TAA, until a method of appraisement can be satisfactorily determined.

Sincerely,

(Signed) Harvey B. Fox

OCT 01 1985

CLA-2 CO:R:CV:V
543616 BG

Frank J. Desiderio, Esq.
Grunfeld, Desiderio, Lebowitz
& Silverman
Two World Trade Center, Suite 2238
New York, New York 10048-0654

Dear Mr. Desiderio:

This is in response to your letter of August 16, 1985, on behalf of Jones Apparel Group Inc., (importer), in which you request a binding ruling that buying commissions and quota charges will not be included in the transaction value of imported merchandise under section 402(b) of the Tariff Act of 1930, as amended by the Trade Agreements Act of 1979 (TAA).

You state that the importer plans to utilize the services of Murjani Industries, Ltd. (buying agent) with respect to the importation of certain merchandise. You indicate that the buying agent will perform routine buying agency functions, and that the importer will pay the buying agent a commission for these services. You rely on Headquarters ruling 542603 dated October 30, 1981, which held that buying commissions paid by Murjani International, Ltd. (Importer) to Murjani Industries, Ltd., (the same buying agent herein) were nondutiable as long as no portion of these fees were remitted to the manufacturer/seller. In the instant case, you state that the buying agent will provide the same services as those described in the prior ruling.

You describe the arrangement between the importer and the buying agent as one whereby the buying agent will be under the express direction and control of the importer. All manufacturers will be advised that orders placed by this particular buying agent are done so on behalf of the importer. You further indicate that a portion of the merchandise to be imported will originate from factories which are totally unrelated to the buying agent's family interests. However, merchandise will also originate from factories in which one family member of the buying agent does in fact have an interest.

The buying agent will also charge the importer for the use of its export quota. Should the importer's quota requirements exceed those available to the buying agent, then the buying agent has the authority to obtain quota on a temporary basis. However, the quota will be obtained from sources other than the factories which will produce the imported merchandise. You state that the arrangement is the same as that covered by Headquarters ruling 54.603.

Transaction value is defined in section 402(b) as "the price actually paid or payable for the merchandise when sold for exportation to the

TO THE

A13

United States," plus amounts for the items enumerated in section 402(b)(1). Buying commissions are not specifically included as one of the additions to the price paid or payable. The price paid or payable is more specifically defined in section 402(b)(4)(A) as:

> The total payment (whether direct or indirect...) made, or to be made, for imported merchandise by the buyer to, or for the benefit of, the seller. (Emphasis added)

In determining whether a bona fide buying agency relationship exists between an importer and an alleged "buying agent", the primary consideration is the right of the principal to control the agent's conduct with respect to matters entrusted to the agent. B & W Wholesale Co., Inc. v. United States, 58 CCPA 92, C.A.D. 1010 (1971), Dorf International, Inc. et al. v. United States, 61 Cust. Ct. 604, A.R.D. 245 (1968). The alleged buying agent may not act as an independent seller, nor as representative of the manufacturer or seller. On the basis of the information you have provided regarding the prospective transactions in question, we are satisfied that the importer will exercise the requisite degree of control over the buying agent. However, you have indicated that the buying agent will be purchasing merchandise from certain factories in which one of the buying agent's family members has an interest. Although this is not per se an absolute bar to the finding of a bona fide agency relationship, the importer has the burden of conclusively demonstrating that it exercises absolute control over the buying agent with respect to these types of transactions. It is also essential that no portion of the commissions paid to the agent inure to the benefit of those factories in which the family member has an interest. With these considerations in mind, we conclude that the commissions to be paid to the buying agent constitute bona fide buying commissions which, therefore, will not be dutiable under transaction value provided the buying agent performs the types of services described in your letter, the importer exercises sole control over the agent's activities, and no part of the commissions inure to the benefit of the factories.

With respect to the quota payments which the importer makes to the buying agent, we conclude that these are nondutiable under transaction value. This holding applies as long as these payments are not remitted in any way, directly or indirectly, by the buying agent to the seller/manufacturer. The facts which you have presented indicate that the quota

RELEASED TO THE

A14

543616

will be obtained from sources other than the factories producing the merchandise. Therefore, these payments, as well as expenses the agent incurs in purchasing quota from unrelated sources, are nondutiable under transaction value.

Sincerely,

(Signed) Harvey B. Fox

CLA-2 CO:R:C:V:V
543627 CH

24 OCT 1985

Ms. Diana Incivelito
Marmaxo Sourcing
350 5th Avenue, 50th Floor
New York, New York 10118

Dear Ms. Incivelito:

This is in response to your letter of September 25, 1985, in which you request a ruling concerning the valuation of finished garments which Speedo America, a division of Marmaxo Sourcing, will be purchasing from an unrelated contractor in Taiwan.

As we understand the facts surrounding this prospective transaction, Speedo (hereinafter referred to "purchaser") has arranged for the purchase of fabric from a fabric supplier whose administrative offices are located in California but whose mill is located in Japan. The fabric supplier is not related to either the purchaser or the Taiwan contractor. Payment for the fabric will be made by the purchaser to the fabric supplier's California office although the fabric will be shipped directly from the mill in Japan to the contractor in Taiwan. The contractor will reimburse the purchaser for the cost of the fabric by opening a letter of credit to the purchaser for this amount. When the finished garments are imported into the United States, the invoice price from the Taiwan contractor to the purchaser will include the cost of the fabric.

You inquire as to the dutiability of the cost of the fabric under these circumstances and ask if our conclusion would be the same if contractors in other countries are used.

From the information provided, it appears that the finished garments will be appraised on the basis of transaction value, which is defined in section 402(b) of the Tariff Act of 1930, as amended by the Trade Agreements Act of 1979 (TAA), as "the price actually paid or payable for the merchandise when sold for exportation to the United States, plus amounts" for five specified items to the extent that those items are not already included in that price. One of the items to be added to the "price actually paid or payable" is "the value, apportioned as appropriate, of any assist."

82

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

Section 402(h)(1)(A) of the TAA provides, in pertinent part, as follows:

> The term 'assist' means any of the following if supplied directly or indirectly, and free of charge or at reduced cost, by the buyer of imported merchandise for use in connection with the production or the sale for export to the United States of the merchandise:
>
> (i) Materials, components, parts, and similar items incorporated in the imported merchandise.

Applying the above provisions to the facts of this case, it is apparent that since the contractor will reimburse the purchaser for the cost of the fabric, the fabric will not be supplied "free of charge or at reduced cost by the buyer" to the contractor. Therefore, the fabric will not constitute an assist. However, inasmuch as the cost of the fabric will be included in the invoice price for the finished garments, this cost will be dutiable as part of the "price actually paid or payable for the imported merchandise." This conclusion would apply to similar transactions involving contractors in other countries.

If you require further advice concerning this matter, please contact Craig Walker of this office at (202) 566-2938.

Sincerely,

(signed) J. T. Roth

Stephen Sale, Esq.
Fenrenbacher, Sale, Fudesco & Quinn
1819 H Street, N.W., Suite 650
Washington, D.C. 20006

Dear Mr. Sale:

This is in response to your letter of October 1, 1985, in which you request a ruling on behalf of Eastern Silk Trading Co., Ltd. (hereinafter referred to as "importer") concerning the valuation of silk comforter covers which your client will begin importing from Hong Kong in the near future.

According to the information you have provided, the silk bedding will be purchased from a bedding manufacturer in Hong Kong and will be composed of scraps of silk fabric which the bedding manufacturer has purchased from a furniture manufacturer in Hong Kong. The silk scraps are the residue from the manufacture of silk-upholstered room dividers and headboards by the furniture manufacturer who, in turn, has purchased its requirements of silk fabric from a supplier in the People's Republic of China. In addition to purchasing the silk bedding from the bedding manufacturer, the importer will also purchase upholstered furniture from the Hong Kong furniture manufacturer.

You state that for purposes of assisting in regard to its purchases of upholstered furniture and silk bedding from Hong Kong, the importer has retained a Hong Kong firm as its purchasing agent. To the best of your knowledge, neither the agent nor the importer is related to or affiliated in any way with either the bedding manufacturer or the furniture manufacturer. You also state that the agent is not itself a manufacturer and, to the best of the importer's knowledge, is not related to a manufacturer. Although there is no indication in your letter as to whether the importer and agent are related, we are assuming for purposes of this ruling letter that these parties are not related within the meaning of section 402(g)(1) of the Tariff Act of 1930, as amended by the Trade Agreements Act of 1979 (TAA).

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

B4

You advise that the services which the agent has and will continue to perform for the importer include.

> ... (1) assistance in the identification of and contractural negotiation with the furniture and bedding manufacturers in Hong Kong, (2) establishment of quality standards for and sources of silk fabric in Hong Kong, (3) coordination of efforts of manufacturers so that the residue of one manufacturer can be used by the other manufacturer, (4) purchasing, (5) quality control and manufacturer liaison, (6) receiving inspection, (7) arranging delivery to the carrier, and (8) payment of manufacturers for the account of (the importer) with funds received from (the importer).

As compensation for performing these services, the agent will receive from the importer a commission of 6 percent of the purchase price of the bedding and furniture articles.

On the basis of the foregoing information, you request that we confirm the following:

A. That the comforter covers shall be valued by Customs at the purchase price paid to the manufacturer.

B. That the purchasing agency commission shall be excluded in the determination of the value of the comforter covers.

The primary basis of appraisement under the valuation statute, transaction value, is defined in section 402(b) of the TAA as "the price actually paid or payable for the merchandise when sold for exportation to the United States, plus amounts" for five specified items to the extent that those items are not already included in that price. Although "any selling commission incurred by the buyer with respect to the imported merchandise" is included as one of the five items, buying commissions are not included as an item to be added to the price actually paid or payable.

From the information you have provided, it is our opinion that transaction value, as represented by the price paid or payable by the importer to the bedding manufacturer for the comforter covers, will be the basis of appraisement

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

543632

BS

for the imported merchandise. Moreover, based upon your description of the services which the agent has and will be performing on behalf of the importer, we believe that the 6 percent commission to be paid by the importer to the agent will constitute a bona fide buying commission. As such, the commission will not be dutiable as part of the transaction value of the imported silk bedding.

As we pointed out in TAA #7, it will be necessary for the entry documents to include an invoice or other documentation from the bedding manufacturer to establish that the agent is not the seller and to determine the price actually paid or payable to the seller.

Sincerely,

Harvey B. Fox

Ms. Suzanne Driscoll
Apollo Computer Inc.
International Distribution
330 Billerica Road
Chelmsford, Massachusetts 01824

Dear Ms. Driscoll

This is in response to your letter of October 17, 1985, on behalf of Apollo Computer Inc., in which you request a decision as to the proper value of merchandise of foreign manufacture which is used and subsequently returned to the United States for repair.

You indicate that the parts in question are manufactured abroad, purchased by your company in this country and imported, and then shipped back out to a subsidiary in a foreign country. The appropriate duty is paid and drawback is obtained. After various time periods, you state that the part breaks down thereby necessitating its return to the United States for repair. An invoice is prepared by the foreign subsidiary reflecting a value equal to the original purchaser price. Duty is again paid by your company based upon this full value.

You further state that it is possible to determine the date of manufacture of each part by tracing the serial number. It is your contention that a deduction in the value of the parts should be made depending upon the date of manufacture. You advise that a Customs Service import specialist has proposed a 5 percent reduction in value for every year the item has been in use.

The primary basis of appraisement pursuant to the Trade Agreements Act of 1979 (TAA), is "transaction value." This is defined in section 402(b) of the Tariff Act of 1930, as amended by the TAA as "the price actually paid or payable for the merchandise when sold for exportation to the United States...". Although this is proper for the first importation of the parts (when new) to the United States, we agree with you that, when the parts are returned for repair the original purchase price should be adjusted downward to reflect reasonable depreciation for the period of time that the parts are used abroad.

We believe that the proposed 5 percent reduction in value for every year of use is acceptable, provided such a depreciation rate is in accordance with generally accepted accounting principles as they relate to the specific merchandise under consideration here.

RELEASED TO THE PUBLIC

B7

We should point out that foreign-made components may be imported for repairs free of duty under bond pursuant to the provisions of item 864.05, TSUS, copy enclosed. This entry procedure may be used in those circumstances where parts are returned for repairs and exported after repairs. However, the same repaired article must be exported. The law does not permit one article to be substituted for another. In circumstances where an article is imported for repairs and a substituted article is exported, item 864.05, TSUS, is inapplicable. However, if fungible merchandise is commingled, identification on the basis of records is permitted. Fungibility is usually a question of fact.

The final decision regarding the dutiability for the returned parts will be made by the Customs office at the port where the merchandise will enter the United States.

Sincerely,

(Signed) Harvey B. Fox

Mr. Charles Williams
Manager, Administrative Services
R & H Fraser Companies
Box 3587 Georgetown Station
Washington, D.C. 20007-0087

Dear Mr. Williams:

This is in regard to your correspondence dated October 4, 1985, concerning the customs valuation of merchandise which is the subject of countertrade transactions. Please be advised that the Customs Service currently values imported merchandise pursuant to a hierarchy of methods prescribed by the Trade Agreements Act of 1979 (P.L. 96-39) (the TAA). Under the TAA the large majority of imported merchandise (over 95 percent) is valued under transaction value. Transaction value is defined in 19 U.S.C. 1401a(b) as follows:

> (1) The transaction value of imported merchandise is the price actually paid or payable for the merchandise when sold for exportation to the United States....

The use of transaction value is precluded in countertrade transactions if the parties thereto have not made reference in their contracts to some reasonable monetary standard representing the "price actually paid or payable" for the merchandise. In such instances it would be necessary for Customs to value merchandise under one of the following methods, all of which are described in the attached pamphlet:

1. Transaction value of identical or similar merchandise

2. Deductive value

3. Computed value

Finally, the identification of a transaction as involving countertrade will not normally be readily apparent from the entry documents filed with Customs. Accordingly, in order to have your importations involving countertrade processed properly, we would advise

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B9

that you give advance notification to the appropriate Customs personnel at the ports through which you intend to import that your importations involve countertrade.

Sincerely,

Ms. Gigi Kalfayan
Import Manager
Toshiba America, Inc.
82 Totowa Road
Wayne, New Jersey 07470

Dear Ms. Kalfayan:

In your letter dated April 3, 1984, addressed to our New York Seaport Area office, you inquired as to the dutiable status of a stereo cassette tape player system identified as the Toshiba Model RT-CS1. This article, which is produced in Japan, measures 10-11/16 inches long, 3-3/8 inches high, and 1-7/8 inches wide. It consists of two main components: (1) a speaker/amplifier section; and (2) a tape player.

The speaker/amplifier section is designed to house the tape player. It has two speakers which are located on either end of the unit. A plug protrudes from the inner side of each speaker to connect the unit electronically with the tape player. The speaker/amplifier section has volume and power mode controls along its top side, as well as a telescopic antenna in the back.

The tape player is a portable unit measuring 4-5/16 inches long, 3-1/8 inches high, and 1-1/8 inches wide. It has no built-in loudspeaker, but it can be used independently of the speaker/amplifier section by connecting headphones or earphones to it through two jacks provided for that purpose. Otherwise, of course, the tape player may be connected to the speaker/amplifier section for listening.

The RT-CS1 tape player system will be imported and sold with a number of accessories. First of all, it will come with what is described in the sales literature as "headphones." As pictured in the literature, these "headphones" appear to be stereo earphones, for the two miniature speakers are not attached to each other by a band worn over the head to support them. The RT-CS1 will also include an AM/FM tuner pack which can be inserted into the tape player like a cassette and used as a radio receiver. This tuner pack is made to be inserted into any Toshiba model cassette player. Finally, to assist in the portability of the unit, the RT-CS1 will come with a textile carrying strap which can be attached to the ends of the speaker/amplifier section of the article, and a belt clip that is used to hold only the tape player section of the system when one wants to use the tape player independently of the speaker/amplifier section.

B11

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

The importation of the tape player, the speaker/amplifier, the "headphones," the AM/FM tuner pack, the carrying strap, and the belt clip together in one shipment raises the question whether any or all of these articles are classifiable as an entirety for customs purposes. In cases regarding the applicability of the entireties doctrine to imported audio components, Customs has previously looked to whether the components may be used solely with one system and whether the separate identity of each component is subordinated to and lost in that system. See Customs Rulings CLA-2 CO:R:CV:V 071832 KP (Dec. 24, 1984) and CLA-2 RRUCSC 065054 LLB (Aug. 14, 1980). With this in mind, it appears that the tape player and the speaker/amplifier section of the RT-CS1 are classifiable as an entirety because, although the tape player is capable of separate use, the speaker/amplifier looks to be usable only with that tape player. This observation is based on the immobility of the plugs which connect the speaker/amplifier unit to the tape player. Where all of the entities in a combination are complete in themselves and are capable of separate use, the unit is not an entirety, but where at least one of the entities has no separate commercial value or separate use, the combination is an entirety. Chadwick-Miller Importers, Inc. v. United States, 59 Cust. Ct. 529, 535, C.D. 3221 (1967). Therefore, unless there is a viable use for the speaker/amplifier unit independent of the RT-CS1 tape player, the tape player and the speaker/amplifier are classifiable as an entirety under the provision for machines not specially provided for, and parts thereof, in item 678.50, TSUS, which currently carries a column 1 duty rate of 4 percent ad valorem. We believe this to be consistent with the legislative intent behind the Tariff Schedules, for, as the Customs Court has stated, "[w]e do not think that Congress intended to classify separately an article which, as generally accepted, has no viable separate identity except in combination with another article." Ikora, Inc. v. United States, 66 Cust. Ct. 262, 271, C.D. 4202, 325 F. Supp. 905, 912 (1971).

Regarding the "headphones," we recently held that headphones and earphones imported with portable radio-tape players similar to the RT-CS1 tape player were classifiable separately therefrom because the headphones and earphones were usable with other audio components and did not lose their identity when used in conjunction with the radio-tape players. See Customs Ruling CLA-2 CO:R:CV:V 553148 KP (Aug. 27, 1985). We assume that the "headphones" for the RT-CS1 may likewise be used with other audio components. Consequently, they, too, are classifiable separately from the tape player systems with which they are imported. There is a tariff provision for headphones in item 684.70, TSUS, but that provision is limited to certain audio listening devices which are supported in position by the user's head. General Electric Co. v. United States, 59 Cust. Ct. 140, C.D. 3887 (1969), aff'd, 58 CCPA 152, C.A.D. 1021, 441 F.2d 1186 (1971). Inasmuch as the "headphones" imported here are actually stereo earphones, they cannot be classified in item 684.70, TSUS. Instead, they are classifiable under the provision for radiobroadcasting reception apparatus and parts thereof, other, other, other, in item 685.32, TSUS, and dutiable at a rate of 6 percent ad valorem.

553161

B12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

The AM/FM tuner pack obviously has a separate use, and thus a separate identity, from the rest of the imported merchandise since it can be used with any Toshiba model cassette player. Therefore, it is seperately classifiable under the provision for solid-state entertainment broadcast band radio receivers in item 685.14, TSUS, which carries a column 1 duty rate of 7.1 percent ad valorem.

As for the carrying strap, we have previously ruled that carrying straps imported with certain transceivers and transistor radios should be separately classified from those electrical devices because the straps and the radios and transceivers remain distinct articles which do not lose their identity upon being joined and used together. See C.I.E. 635/67 and C.I.E. C-29/68. From the pictures contained in the sales literature which you submitted, we find that the same may be said of the carrying strap and the RT-CS1 tape player system. Accordingly, depending on the type of textile of which it is made, the carrying strap is separately classifiable either under the provision for other articles not specially provided for, not ornamented, of cotton, other, other, in item 386.53, TSUS, which carries a column 1 duty rate of 9.3 percent ad valorem, or under the provision for other articles not specially provided for, not ornamented, of man-made fibers, other, other, in item 389.62, TSUS, which carries a column 1 duty rate of 8 cents per pound plus 11 percent ad valorem.

Finally, based on judicial precedent, we find that the belt clip is also separately classifiable from the tape player system. In Mattel, Inc. v. United States, 8 CIT ___, Slip Op. 84-133 (Dec. 11, 1984), the issue presented was whether certain doll stands imported in retail packages with the dolls with which they were to be sold were classifiable as entireties with those dolls. The court observed that the doll stands had extrinsic value and identity as evidenced by their capability to be used with other dolls. This interchangeability of use also indicated to the court that the doll stands did not merge and lose their identity to form a new article of commerce when combined with the dolls. In addition, the court noted that the doll stands were not vital towards the play activities of the dolls, but merely supplemented those activities. Moreover, the court found that the both the dolls and the doll stands were commercially viable entities in and of themselves; neither object was essential to the completeness of the other. Therefore, the court held that the dolls and the doll stands were separately classifiable.

What was said of the dolls and doll stands in Mattel may also be said of the tape player system and the belt clip here. There does not appear to be any reason why the belt clip cannot be used with other tape players aside from the RT-CS1 tape player. This indicates that the belt clip has an extrinsic value and a separate identity which is not lost in a new article of commerce when the belt clip is combined with the tape player. Additionally, the belt chip is not vital to the tape player system's use, but simply supplements that use. Neither the belt clip nor the tape player system is essential to the completeness of the other article; each one is commercially viable by itself. Thus, the belt clip should be treated as a separate entity for tariff purposes.

B13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

In contrast, we note Lafayette Radio Electronics Corp. v. United States, 57 CCPA 62, C.A.D. 977, 421 F.2d 751 (1970), which involved the classification of two models of transistor radios imported with leather cases. The cases were separately designed to fit the respective radio models and had die cuts positioned for the radios' dials, knobs, antennas, and the like. Thus, the radios could function and were designed to function in the cases as cohesive units. Taking that in conjunction with the facts of importation and sale as units, enhancement of appearance, and the functional contributions of protection and portability afforded by the cases, the court held that the radios and cases should be classified as entireties. In so ruling, the court distinguished its case from two earlier decisions holding that cases imported and sold with binoculars and microscopes, rspectively, but which did not function as units with their respective instruments, were separately classifiable from the binoculars and microscopes.

Unlike the Lafayette radio cases, the belt clip is used only with a part of the RT-CS1 tape system, and only for limited applications. Thus, it does not function as a unit with the tape player system. Furthermore, the belt clip does not appear to be specially designed for the RT-CS1 tape player, nor does it protect the tape player or enhance its appearance. These properties warrant separate classification of the belt clip. Accordingly, ass ming the belt clip to be made of plastic, it is classifiable under the provision for articles not specially provided for, of rubber or plastics, other, other, in item 774.55, TSUS, and dutiable at a rate of 6.1 percent ad valorem.

Sincerely,

Russell Arnold

Ms. Valerie T. Diaz
Diaz Customs Brokerage Services
P.O. Box 1503
Frederiksted
St. Croix 00840
U.S. Virgin Islands

Dear Ms. Diaz:

This is in response to your letter of August 8, 1984, concerning merchandise entered in the United States Virgin Islands from the Customs territory of the United States.

After receiving a report from the District Director of Customs in the Virgin Islands, and reviewing the applicable statutes involved we have reached the following conclusions:

(1) Importations of foreign merchandise listed in section 2 of Public Law No. 64 of April 1, 1914, the Virgin Islands Tariff Act, are to be extended duty-free treatment when imported into the United States Virgin Islands from the Customs territory of the United States.

(2) Based upon section 301 of the Virgin Islands Act No. 4877, the U.S. Customs Service in the Virgin Islands has the authority to require of the importer documentation concerning items shipped from within the United States Customs Zone. This Virgin Islands Act was passed subsequent to Treasury Decision 72-213. Pursuant to section 301, Customs has the authority to require an original invoice annotated by the seller or shipper.

We have informed the District Director of Customs in the Virgin Islands of these conclusions and appropriate action will be taken.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

CLA-2 CO:R:CV:V
553431 KP

Paul E. Linet, Esq.
Sandler & Travis, P.A.
Rivergate Plaza
444 Brickell Avenue
Miami, Florida 33131

Dear Mr. Linet:

This is with reference to your letters dated June 19, 1984, November 14, 1984, January 14, 1985, and March 25, 1985, which you submitted on behalf of your clients James E. O'Brien and W. P. Greer, wherein you requested a ruling that threaded, coupled, steel oil well casing and tubing produced in Panama as described below is properly classifiable in item 610.42, Tariff Schedules of the United States (TSUS), and qualifies for duty-free entry into the United States pursuant to the Caribbean Basin Initiative (CBI).

As you described it, the proposed Panamanian processing involves two stages. The first stage entails the unrolling of coils of steel (known as skelp) into flat skelp, shaping the flat skelp into cylinders, crimping and trimming the edges of the steel cylinders, welding the steel together to form closed tubes, trimming the seams of the tubes, spraying the tubes to cool them, cutting the tubes to predetermined lengths, hydrostatically testing the tubes, inspecting the tubes for proper welds and dimensional specifications, coating the tubes with lacquer, stencilling the tubes, and measuring the tubes for shipment to a processing facility. You identify the articles emerging from this portion of the Panamanian processing as plain end tubular pipe. The second stage of the processing begins in one of two ways, depending upon whether the steel pipe is to be made into casing or tubing. To prepare the pipe to be made into casing for the threading process, the ends of the pipe are bevelled. The pipe to be made into tubing, however, is prepared for threading using a process called "upsetting," whereby the ends of the pipe are heated, forged, and thickened. Steel pipe for tubing having diameters of 2-3/8 inches and 3-1/2 inches is not subjected to the "upsetting" process. After the steel pipe undergoes proper preparation, it is threaded, couplings are applied to one end of each pipe, the articles are hydrostatically tested, they are "drifted" (a test to assure proper inside diameter), thread protectors are installed for shipping, and the finished products are tallied and bundled for shipment.

Generally speaking, any merchandise which is imported directly from a CBI beneficiary country and which meets the country of origin criteria in section 10.195, Customs Regulations (19 CFR 10.195), is eligible for duty-free treatment under the CBI. 19 CFR 10.191(b)(2). Subsection (a) of 19

C2

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

CFR 10.195 sets forth two requirements which must be satisfied in order for an article to be accorded duty-free entry under the CBI. First, the article must be either (1) wholly the growth, product, or manufacture of a beneficiary country or (2) a new or different article of commerce which has been grown, produced, or manufactured in a beneficiary country. Second, the sum of the cost or value of the materials produced in a beneficiary country or countries, plus the direct costs of processing operations performed in a beneficiary country or countries, must not be less than 35 percent of the appraised value of the article at the time it is entered.

For purposes of the latter requirement in 19 CFR 10.195(a), "materials produced in a beneficiary country or countries" includes those materials incorporated in an article which are substantially transformed in any beneficiary country or two or more beneficiary countries into a new or different article of commerce which is then used in any beneficiary country in the production or manufacture of a new or different article which is imported directly into the United States. 19 CFR 10.196(a)(2). In The Torrington Co. v. United States, _____ CIT _____, Slip Op. 84-101 (August 24, 1984), the court found that a similar regulation promulgated by Customs with respect to the Generalized System of Preferences (GSP) implicity requires that "[t]here must first be a substantial transformation of the non-BDC [beneficiary developing country under the GSP] material into a new and different article of commerce which becomes 'materials produced,' and these materials produced in the BDC must then be substantially transformed into a new and different article of commerce" in order to include the cost of a BDC material towards the GSP's 35 percent value-content requirement. The court noted that "such a requirement is not contrary to the GSP statute and its goals," and that "absent such a dual requirement, the GSP's goal of industrialization, diversification, and economic progression for underdeveloped nations could be frustrated." For similar reasons, Customs requires the same dual substantial transformation of materials produced outside of the CBI beneficiary countries in order to include the cost of materials made therefrom towards satisfaction of the CBI's 35 percent value-content requirement.

We find that the threaded, coupled, steel oil well casing and tubing produced in Panama as described above cannot enter the United States free of duty pursuant to the CBI because, according to the information you submitted, the 35 percent value-content requirement in 19 CFR 10.195(a) cannot be satisfied. In this regard, you maintained that the plain end tubular pipe resulting from the first stage of the Panamanian processing is a material produced in Panama which, in turn, is substantially transformed in Panama into oil country tubular goods. Therefore, you believe that the cost of that pipe may be counted towards meeting the CBI 35 percent value-content requirement.

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

C3

553431

1

We disagree. In Customs Ruling CLA-2 CO:R:CV:G 075174 JLV (March 15, 1985), we held that plain end tubing from Korea dedicated to meeting a certain API specification for oil well inner tubing did not undergo a substantial transformation in Mexico when it was upset, threaded, fitted with couplings, and tested so as to meet all the requirements of the API specification to which it was dedicated. It appears that the second processing stage in Panama, wherein the plain end tubing resulting from the first processing stage is used to produce the final oil country tubular goods, consists of virtually the same operations as the ones performed in Mexico in the above-cited case to produce the oil well tubing, and consists of less complex operations to produce the oil well casing, which is prepared for threading by a bevelling operation rather than "upsetting." Furthermore, it appears that the plain end tubing produced in the first processing stage is dedicated in the same manner and to the same extent towards making the ultimate products as was the plain end tubing from Korea in the referenced decision. Thus, assuming without deciding that the plain end tubing resulting from the first Panamanian processing stage constitutes a new and different article from the imported steel, it is not further substantially transformed into other new and different articles of commerce in Panama. Accordingly, the cost of the plain end tubing cannot be included towards meeting the CBI 35 percent value-content requirement, for it is not a "material produced in a beneficiary country" as defined in 19 CFR 10.196(a).

553431

You cite Customs Ruling CLA-2 CO:R:CV:V 071620 FF (December 24, 1984) for the proposition that substantially transformed constituent materials may be counted towards the GSP 35 percent value-content requirement when the totality of the circumstances demonstrates that a product of the beneficiary country has been made. On that basis, you contend that the cost of the plain end tubular pipe used to produce the oil well casing and tubing in Panama should be includable towards meeting the similar 35 percent requirement for CBI eligibility.

In the ruling in question, the imported merchandise consisted of magnetic disc memory heads, referred to as E Blocks, which were assembled in Singapore from, inter alia, certain subassemblies known as Head and Gimbal Assemblies (HGA's) produced in the Philippines or in Thailand. Inasmuch as the Philippines, Thailand, and Singapore are members of the Association of South East Asian Nations (ASEAN), which is treated as one country for most GSP purposes, the importer sought to enter the E Blocks free of duty under the GSP. However, since the HGA's were assembled from components produced in countries outside the ASEAN, a question arose whether the HGA's were substantially transformed constituent materials produced in the ASEAN which, in turn, were substantially transformed in producing a new and different article of commerce in the ASEAN. We concluded that the extensive processing of the original non-ASEAN materials substantially transformed those materials into new and different articles of commerce identified as HGA's. In addition, we found that the assembly of the HGA's with other components in Singapore resulted in the

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

C4

production of another new and different article of commerce, the E Blocks. With the necessary dual substantial transformation present, the cost of the HGA's could be counted towards meeting the GSP 35 percent value-content requirement.

Unlike the HGA's in that case, the plain end tubular pipe produced in the first processing stage in Panama is not a different and distinct article of commerce from the ultimate product into which it will be made. Rather, it is dedicated towards making oil country tubular goods meeting particular API specifications by virtue of the metallurgical qualities, tensile strength, wall thickness, and inside tube diameter built into it during the first processing stage. Thus, the name, character, and use of the merchandise remain unchanged as it proceeds through the second manufacturing stage. Consequently, there is no second substantial transformation as is required to count the cost of the plain end tubular pipe towards meeting the CBI 35 percent value-content requirement. That plain end tubular pipe like that which would be produced in the first processing stage might be adaptable to and may have actually been sold in a few isolated situations for uses other than in the production of oil country tubular goods meeting the particular API specifications for which it was designed does not convince us that the character or use of the plain end pipe is different from the oil well casing and tubing, for unless those uses take advantage of the special qualities built into the plain end tubing and are, in fact, significant uses for such tubing, they would be considered fugitive uses.

It appears from cost information you submitted that without the ability to include the value of the plain end tubing as a material produced in Panama towards meeting the CBI 35 percent value-content requirement, the final articles to be produced in Panama are unable to satisfy that requirement. Therefore, the oil well casing and tubing cannot enter the United States free of duty under the CBI.

Insofar as the tariff classification of the oil well casing and tubing is concerned, we agree that the merchandise would be classifiable under item 610.42, TSUS, provided that it conforms to API specifications as indicated in your letter.

Sincerely,

(Signed) Harvey B. Fox

AUG 28 1985

CLA-2 CO:R:CV:V
553567 KP

Bruce Aitken, Esq.
Busby, Behm and Leonard, P.C.
1629 K Street, NW., Suite 1100
Washington, D.C. 20006

Dear Mr. Aitken:

This is with reference to your letters dated March 29, 1985, and August 1, 1985, submitted on behalf of your client Times Fiber Communications, Inc., wherein you requested that we review part of a tariff classification ruling issued by the Area Director of Customs, New York Seaport, on January 14, 1985 (reference CLA-2-06:S:COM:N1:108-760 811480), holding that two specific components of the MINI-HUB II cable television distribution system are classifiable under item 685.90, Tariff Schedules of the United States (TSUS).

The MINI-HUB II is a system that may be used by cable operators to selectively distribute television signals to its subscribers via coaxial cable. It consists of modular components which may be combined in various ways to fit the particular needs of different cable operators.

The signal-processing electronics of the MINI-HUB II are housed in Local Distribution Units (LDUs), which are centrally located within a subscriber service area. The LDUs contain variable amounts of different system components according to the number of subscribers served and the types of services provided to those subscribers. It is New York's classification of two of these types of components found in the LDU which is questioned here.

One of the subject components is identified as a Remote Switching Unit (RSU). An RSU is installed in an LDU for each primary television set in a subscriber's home. The RSU receives channel-change request signals from a subscriber's remote interface unit, and relays them to the other of the two components in question, which has been identified as the Digital Controller Card, the Digital Control Module, and the Digital Communications Module (hereinafter referred to as the "DCM"). The DCM contains a microprocessor and the nonvolatile logic needed for recording subscriber authorization information. Upon receiving a channel-change request, the DCM ascertains whether the subscriber who has made the request is authorized to receive the channel requested, and sends back an appropriate signal to the RSU instructing it to fulfill or deny the request. If ordered to fulfill the request, the RSU uses its tuner to select the frequency requested by the subscriber, and sends that signal back via coaxial cable through the remote interface unit to the subscriber's television set.

C6

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

1

Although the RSU is denominated as a "switching" unit, that module cannot be classified under item 685.90, TSUS, because its tuner gives the RSU a function which is inconsistent with classification of the device merely as a switch or other electrical apparatus for making or breaking electrical circuits. Accordingly, we agree with your contention that the RSU is properly classifiable under the provision for other television apparatus and parts thereof, other, in item 685.08, TSUS.

However, we do not agree with your similar claim regarding the DCM, which is basically a control module. As explained in an affidavit from Mr. Donald Moore, Director of Manufacturing for the Communications Systems Division of Times Fiber Communications, Inc.:

> The DCM is a micro-processor based control module that controls the operation of the programmable two-way signal converter modules (RSU's). It also processes control information from the central office coming to the M-H II hub location. Subscriber requests arrive at the DCM from the RSU and are then processed. The DCM then directs the RCU [sic] either to fullfill [sic] or deny the subscriber request, depending on the control data received from the central office and stored in its memory.
>
> A single DCM serves up to as many as 16 RSU's. Hence, this module is an integral and controlling component required in the operation of the full M-H II system.

Letter dated August 1, 1985, at Appendix 5.

In United States v. John V. Carr & Son, Inc., 61 CCPA 41, C.A.D. 1116, 495 F.2d 771 (1974), the imported merchandise consisted of two kinds of transistorized printed wiring board assemblies, one invoiced as a "control board" and the other as a "protective circuit board." These boards were used as parts of a pulse modulation system for operating fork lift trucks. The function of the control board was to provide electrical pulses to control the opening and closing of a solid state switch device which regulated the flow of energy to the truck's motor. The court held that the control board was "within the common meaning of at least certain of the articles in 685.90, including particularly 'other electrical apparatus for making or breaking electrical circuits, for the protection of electrical circuits, or for making connections to or in electrical circuits; *** control panels; *** and parts thereof.'" 61 CCPA at 45, 495 F.2d at 774. Accordingly, it was classified under that item number.

Like the control board in Carr, the DCM is essentially a transistorized printed wiring board assembly except that the DCM has a metal housing. Nevertheless, the primary purpose of the DCM is to control a switching device which, in this case, regulates the frequency which is transmitted to the subscriber's television set. Therefore, we conclude that the DCM, like the Carr control board, is classifiable in item 685.90, TSUS.

553567

c1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ——

The microprocessor and other devices incorporated in the DCM which allow it to process data do not make the DCM "more than" the type of articles classified in item 685.90. Unlike a computer, whose main functions are to store and manipulate data, the DCM performs those functions only so that it may serve its purpose of controlling the RSUs. Thus, the data processing functions of the DCM are subservient to its control function, as they are merely the means by which control is accomplished.

Accordingly, Customs Ruling 811480 is modified to classify the RSU under item 685.08, TSUS, and affirmed with respect to classification of the DCM under item 685.90, TSUS. The column 1 rates of duty for those tariff provisions are 4 percent ad valorem for item 685.08, TSUS, and 6.1 percent ad valorem for item 685.90, TSUS.

Sincerely,

(Signed) RUSSELL ARNOLD

C8

DEC 2 1985

CLA-2 CO:R:CV:V
553651 HS

District Director of Customs
U.S. Customs Service
Post Office Box 3130
Laredo, Texas 78041

Dear Sir:

This ruling is in response to the Application for Further Review of Protest No. 2304-4-000022 dated April 13, 1984.

ISSUE:

Whether a glass decanter imported without a handle that is dedicated for use as part of an electric coffee-maker is classifiable as an article chiefly used in the household or elsewhere for preparing, serving, or storing food under item 546.60, Tariff Schedules of the United States (TSUS), or as a part of an electro-thermic kitchen and household appliance under item 684.55, TSUS.

FACTS:

Imported glass decanters are brought into the United States from Mexico without handles attached. The decanters are marked with the graduated cup measurements and product identification. They are built specifically for use with a specific electric coffee-maker with the exact design, capacity, and physical properties necessary for functioning with the coffee-maker. After importation, the imported decanters are equipped with metal neck bands and handles. The decanter is designed to maintain coffee at the proper temperature when sitting on the coffee-maker's warmer plate, but is not constructed to withstand the high temperatures produced

553651

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

C9

by gas or electric stove burners or ovens. The decanter bottom has a convex surface specially designed to mate with the concave surface of the warmer plate and seat.

LAW AND ANALYSIS:

Item 546.60, TSUS, provides for articles of glass chiefly used in the household for preparing, serving or storing food or beverages. Item 546.60 does not include "parts" of the articles described (L & B Products Corp. v. United States, 70 Cust. Ct. 30, C.D. 4404 (1973)), but does embrace the articles described even though they are unfinished (General Headnote 10(h), TSUS). In our view, the imported article — although lacking a handle — is a substantially complete decanter; consequently, item 546.60 is not precluded from application. Daisy-Heddon, Div. Victor Comptometer v. United States, 66 CCPA 97, C.A.D. 1228 (1979). The information submitted indicates that the broad chief use of the finished decanter is in the preparation, serving, and (to a limited degree) storage of a beverage (coffee).

The competing tariff provision at the time of the entries at issue was item 684.55, TSUS (now 684.2020), which provides for portable electrothermic kitchen and household appliances (coffee-makers) and parts thereof. The information contained in the file unquestionably establishes that the imported article, when finished, will be chiefly used as a part of the "Mr. Coffee" coffee-maker and was specifically designed for such use. To the extent the imported article, after finishing, is sold separately (rather than being combined with the balance of the coffee-making apparatus and marketed as a complete "Mr. Coffee" unit), the information submitted

553651

C10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

indicates that its use will be effectively limited to service as an additional or replacement decanter with "Mr. Coffee" or similar coffee-makers.

The determination as to which of the two provisions described above sets forth the most appropriate tariff description of the imported article is guided by General Headnote 10(ij), TSUS, which provides that "a provision for parts of an article covers a product solely or chiefly used as a part of such article, but does not prevail over a specific provision for such parts."

Notwithstanding the case law, legislative history, and arguments advanced by counsel for the protestant, we do not believe that item 546.60, TSUS, is inherently incapable — because it embraces articles "not specially provided for" elsewhere in the tariff schedules — of being a "specific provision" within the meaning of General Headnote 10(ij). However, whether item 546.60 qualifies as a "specific provision" in the instant case can only be determined by examining the degree to which the imported merchandise fits within its terms.

Although the imported articles, when finished, are encompassed in the universe of glass articles chiefly used in the household for preparing, serving, or storing beverages, such use(s) are chiefly in connection with the coffee-makers of which they are designed to be a part; the finished decanters are of the broad class or kind of articles used to prepare and serve coffee but, because of their physical characteristics, are effectively limited to use with coffee-maker/warmers of the "Mr. Coffee" type. In short, the imported article, when finished, has no substantial use, practical or commercial, other than with the device (coffee-maker) of which it is claimed to be a part.

553651

C11

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Based on the foregoing, we conclude that item 546.60, TSUS, is not a "specific provision" for the imported merchandise within the meaning of General Headnote 10(ij) and that such merchandise is more specifically described as a part of a coffee-maker. Trans-Atlantic Company v. United States, 74 Cust. Ct. 134, C.D. 4597 (1975).

HOLDING:

In accordance with the above reasoning, we conclude that the decanters should be classifiable under item 684.55, TSUS. The protest should be granted. A copy of this decision should be attached to the Form 19, Notice of Action, to be sent to the protestant.

Sincerely,

(Signed) Harvey B. Fox

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

C12

AUG 20 1985

CLA-2- CO:R:CV:V
553654 HS

David C. Elliott, Esq.
Barnes, Richardson & Colburn
475 Park Avenue South
New York, New York 10016

Dear Mr. Elliott:

This is in response to your letter of May 13, 1985, requesting on behalf of Durand Glass Manufacturing Co., a ruling as to whether certain articles of glass which are used in the manufacture of glass stemware are properly classifiable under Item 548.05, Tariff Schedules of the United States (TSUS) as articles, not specially provided for, of glass: other.

The articles of glass in question consist of pieces of processed glass which are in the rough shape of stems of finished glassware. Once imported, they will be heated and pulled extending the stems. The base or foot of the articles will then be flattened. The completed stems will then be fused to bowls manufactured in the United States.

In Customs ruling 045680, Customs held that stems of glasses that at the time of importation were in completed form and need only be fused with bowls to become finished glass were articles of glass chiefly used in the household or elsewhere for preparing, serving or storing food or beverages, or food or beverage ingredients under item 546.52, TSUS. The reasoning in that case was that since the glass stems were so far advanced they had a individuality which identified them as the thing they would be when finished: glasses for serving beverages.

In L&R Products Corp v. United States, 70 Cust. Ct. 30, C.D. 4404(1973), a case cited by Customs ruling 045680, it was found that although salt shakers imported without tops could not be utilized as salt shakers in their condition as imported, they could still be used in the household for preparing, serving or storing food or beverages.

RELEASED TO THE

C13

It is our view that the articles of glass in this case are not so far advanced as to be considered unfinished glasses for serving beverages. The articles in this case differ from those in Ruling 045680 as they are not completed stems, but still must be worked on to be finished. L&B Products can be distinguished as the articles in question here, unlike the articles in L&B Products have no use in their imported condition. Articles for serving beverages must have a bowl of some sort to hold liquid; the imported unfinished stems have no characteristic to serve this purpose.

As L&B Products and ruling 045680 can be distinguished, it is our view that the subject articles are not unfinished articles of glass used in the household for preparing, serving or storing food or beverages, but are classifiable under Item 548.05, TSUS, as articles, not specially provided for, of glass: other.

Your inquiry concerning the country of origin marking of the imported articles will be separately addressed.

Sincerely,

(Signed) RUSSELL ARNOLD

DEPARTMENT OF THE TREASURY

U.S. CUSTOMS SERVICE

WASHINGTON

NOV 21 1985

REFER TO
CLA-2 CO:R:CV:V
553739 KP

Paul E. Linet, Esq.
Sandler & Travis, P.A.
Rivergate Plaza
444 Brickell Avenue
Miami, Florida 33131

Dear Mr. Linet:

This is with reference to your letters dated May 8, June 3, July 2, and July 3, 1985, submitted on behalf of your clients and , wherein you requested a ruling that threaded, coupled, steel oil well casing and tubing produced in Panama as described below would be eligible for duty-free treatment under the Caribbean Basin Initiative (CBI) upon importation into the United States.

As described in your letter, the oil well casing and tubing is produced in two stages. In the first stage, products which you identify as steel tubes are formed from imported coils of steel by the following process:

1. The raw material is placed in a slitter line where a double cone-type uncoiler rotates the coil.

2. The peeler section separates the strip where it enters the hold down roll.

3. Side guides direct the strip through the pinch rolls into the flattener.

4. The leading and following ends are crop sheared before being forced into the pinch rolls at the slitter section. The slitter cuts the master coil into strips conforming to the size of the desired product.

5. Each slitted strip is then recoiled and banded.

6. The coils are then placed in a coil car. This entry system uncoils and peels the steel and then feeds it into a roll flattener.

7. At the roll flattener, the coil is extended into the overhead reserve loop storage compartment which stores approximately 400 feet of coil and loop back into a series of leveling rolls.

8. The steel strip is then cropped on the squaring shear and butt welded to the preceding coil end.

D!

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

9. The steel strip next is forced through two side trimmer knives for sizing and then into the tube forming rolls.

10. The tube forming rolls form the steel into a cylinder.

11. The edges of the tube are welded.

12. The external weld bead is then trimmed to a flush condition.

13. The weld area is then normalized by a seam annealer.

14. The welded product then goes through an air cooling zone and into the electro-magnetic inspection station for testing. Marks are put on all detected defects for identification.

15. The product then goes through a water cooling station.

16. Next, the tube goes to a sizing station where any deviations that might have resulted from the application of heat through welding and seam annealing are corrected.

17. The product is then cut to length with a flying cutoff saw.

Although the steel tubes emerging from this process would have virtually the proper wall thickness and inside tube diameter to meet A.P.I. specification 5A for oil well casing and tubing, you stated that they would not have the metallurgical qualities or the yield or tensile strength necessary to satisfy that specification. You furnished us with copies of letters from two industry representatives indicating that steel tubes such as those produced in this first processing stage could and would be sold for use in line pipe, standard pipe, and structural applications.

In the second processing stage of the proposed operation, oil well casing and tubing would be produced from the steel tubes as follows:

1. The tubes that are to be made into oil well tubing are put through an "upset forging" process, in which the ends of the pipe are heated, forged, and thickened.

2. Both the upset tubes (for oil well tubing) and plain-end tubes (for oil well casing) are heated to a temperature above the austenitizing temperature.

3. The tubes are cooled through water quenching.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D2

553739

4. The steel is then heated again through a "tempering" treatment to a temperature below the critical temperature, and cooled.

5. The products are then diverted to an inspection table for visual inspection and laboratory analysis. Electronic and sonic tests may be performed at this station.

6. The ends of the steel tubes are then threaded.

7. Couplings that join individual lengths of the pipe are applied by machine to one end of each steel tube.

8. The tubes are then hydrostatically tested.

9. Next, the steel tubes are "drifted," a test in which a metal cylinder is passed through the inside of the tube to check for compliance with A.P.I. specifications.

10. Thread protectors are [illegible]talled for shipping and handling protection.

11. If the product has met all specifications at this point, it is then conveyed to the identification station where each joint is marked to reflect the individual size, weight, grade, end finish, length, test pressure, method of manufacture, company of manufacture, and origin. The product is then coated with a lacquer finish and banded for shipment.

Generally speaking, any merchandise which is imported directly from a CBI beneficiary country and which meets the country of origin criteria in section 10.195, Customs Regulations (19 CFR 10.195), is eligible for duty-free treatment under the CBI. 19 CFR 10.191(b)(2). Subsection (a) of 19 CFR 10.195 sets forth two requirements which must be satisfied in order for an article to be accorded duty-free entry under the CBI. First, the article must be either (1) wholly the growth, product, or manufacture of a beneficiary country or (2) a new or different article of commerce which has been grown, produced, or manufactured in a beneficiary country. Second, the sum of the cost or value of the materials produced in a beneficiary country or countries, plus the direct costs of processing operations performed in a beneficiary country or countries, must not be less than 35 percent of the appraised value of the article at the time it is entered.

Oil well casing and tubing are not among the types of merchandise that have been specifically excluded from receiving duty-free treatment under the CBI. In addition, Panama is one of the countries which have been designated as beneficiary countries for CBI purposes. You did not specifically state in your correspondence that the finished products would be imported directly into the United States from Panama; however, for purposes of this letter, we shall assume that to be the case. It is beyond question that the oil well casing and tubing, in comparison to the

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D3

imported coils of steel from which they are made, are new or different articles of commerce which are grown, produced, or manufactured in Panama. Accordingly, the primary issue here is whether the 35 percent value-content requirement of the CBI is satisfied. In this regard, you orally indicated that your client must be able to consider the steel tube resulting from the first processing stage as a material produced in Panama, or else the CBI 35 percent value-content requirement cannot be met.

For purposes of the aforementioned 35 percent requirement, "materials produced in a beneficiary country or countries" covers only those materials incorporated in an article which are either (1) wholly the growth, product, or manufacture of a beneficiary country or two or more beneficiary countries, or (2) subject to certain limitations in 19 CFR 10.195(a), substantially transformed in any beneficiary country or two or more beneficiary countries into a new or different article of commerce which is then used in any beneficiary country in the production or manufacture of a new or different article which is imported directly into the United States. 19 CFR 10.196(a). Clearly, the steel tubing emerging from the first processing stage cannot be considered wholly the growth, product, or manufacture of Panama because the raw material from which it is made is the product of a country which is not a beneficiary under the CBI. Therefore, the steel tubing produced by the first stage of processing must satisfy the latter of the two criteria in 19 CFR 10.196(a) in order to be considered a material produced in Panama which may be counted towards meeting the CBI 35 percent value-content requirement.

The second criterion in 19 CFR 10.196(a) imposes a dual substantial transformation requirement upon raw materials imported into a CBI beneficiary country which are to be counted as materials produced in that country. Here, this means that the coils of steel produced in the nonbeneficiary country must first be substantially transformed into a new and different article of commerce which becomes a material produced in Panama. Then, that beneficiary country material, which you claim to be the steel tubing in this case, must, in turn, be substantially transformed into another new and different article of commerce which is imported into the United States. This dual substantial transformation requirement was recently upheld with respect to analogous Customs regulations concerning the Generalized System of Preferences. See The Torrington Co. v. United States, No. 85-670 (Fed. Cir. June 14, 1985).

A substantial transformation occurs when an article emerges from a manufacturing process with a name, character, or use which differs from those of the original material subjected to the process. Torrington, slip op. at 10-11 (citing Texas Instruments, Inc. v. United States, 681 F.2d 778, 782 (CCPA 1982)). By this definition, the first stage of processing clearly effects a substantial transformation of the imported coils of steel. The imported steel is a raw material whose characteristics are no more dedicated to making steel tubes than they are to making many other types of products. However, the steel tubes emerging from the first process have a size and shape which makes them particularly suited for the transportation of liquids or gases, or for use in structural

D4

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

553739

applications calling for pipe. The steel tubes are new and different articles from the imported coils of steel, for they are more refined products which have lost the identifying characteristics of the raw steel and acquired new attributes which make them better qualified for specific uses. Thus, having found a substantial transformation resulting from the first process, we now look to the second process to see if the dual substantial transformation requirement has been met.

In the second processing stage, the steel tubes are made into the final products, oil well casing and tubing. This process is analogous to the first process in that where the first process transformed a material capable of being made into many types of steel products into an article generally designed for steel pipe applications, this process changes the multifunctional tube into pipe that is especially suited for use as oil well casing and tubing. This application demands pipe which can withstand greater stress than that which is used as line pipe or structural pipe, and, in fact, the final products here have a considerably higher yield strength and tensile strength than do the steel tubes emerging from the first process. In addition, the final products meet A.P.I. specifications for different grades of oil well casing and tubing, whereas the steel tubes emerging from the first processing stage do not. Furthermore, with threaded and, in the case of the tubing, upset ends, the oil well casing and tubing have a different physical appearance than the unprocessed steel tubes. Accordingly, we find that the second processing stage, whereby the steel tubes are changed into oil well casing and tubing, also results in a substantial transformation.

These two findings of substantial transformation are supported by the substantiality of the processing operations performed in Panama. As stated earlier, each of the two processing stages causes physical changes to the steel material. From cost figures submitted in connection with your first ruling request on behalf of and (file No. 553431), it is apparent that both processing stages would also add a significant amount of value to the steel. Moreover, inasmuch as the final products must comply with strict standards, the two processing stages demand attention to detail and quality control. Clearly, then, this is not the type of "pass-through" operation which Congress intended to prohibit from receiving the benefits of the CBI.

With the required dual substantial transformation present, the steel tubes may be regarded as a material produced in Panama within the meaning of 19 CFR 10.196(a), and therefore, their value may be included towards the satisfaction of the CBI 35 percent value-content requirement. If, counting the value of the steel tubes, the 35 percent value-content requirement can be met, then threaded, coupled, steel oil well casing and

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

D5

553734

tubing produced in Panama as described herein may enter the United States free of duty under the CBI provided all other pertinent regulations and requirements, such as the requirement that the articles be imported directly into the United States, are satisfied.

Sincerely,

JOHN P. SIMPSON

SUBJECT: I.A. 59/85 - Assembly of Disposable Hospital Gowns and Patients' Drapes in Mexico

The following paragraphs on the 807.00 question may be included in your reply to the subject internal advice on disposable hospital apparel:

It is stated that hospital disposable gowns and patient drapes, which are used for surgery, are made from precut paper, cotton, and textile components that are exported to Mexico for the assembly process. During assembly of the gowns, trapezoidal-shaped sleeve panel components are first sewn to the gown body component and then sewn along a seam, described in the submission as a feld (fell) seam to form the sleeve components, and finally sewing cuff components onto the opposite sleeve ends.

The main component forming the patient drapes is a large rectangular piece of reinforced paper, to which are added side components, called wings, presumably to cover a patient's arms. During the assembly process of adding the side wing components, two slits are made by a machine blade in the main component, parallel with the drape length. Tracks of glue are applied or laid along the sides where the drape is slit and the added side components are manually laid over the glue tracks to form the added wing components.

With respect to component materials exported for assembly and return, item 807.00, TSUS, provides for United States components that are designed to be fitted together in an assembly process, with no operations performed thereon except attachment of the components to form the imported merchandise and operations incidental thereto.

On the basis of the samples and information submitted, allowances may be made for those components forming the hospital drapes since the slitting operation appears to be minor and bears some relation to the total assembly of the drapes. However, no allowances can be made under the tariff provision for the exported panels that are sewn into the form and shape of sleeves during the assembly process. The requirement under the tariff

MAY BE RELEASED TO THE PUBLIC

D7

provision that a component "be ready for assembly without further fabrication" dictates that the component be a finished article ready for assembly. In the circumstances described, the sleeves were not exported as finished sleeves but had to be fabricated into sleeves abroad by the fell seaming operation on the sleeve material.

Accordingly, the sleeve panels are regarded as having been exported "not in condition ready for assembly without further fabrication."

New York, New York 10048

FROM : Chief, Value & Special Classification Branch

SUBJECT: Reconsideration PRT 0901-3-000413 Decision Buffalo 553617 EM

This has reference to your memorandum dated June 25, 1985, requesting a partial reconsideration of the denial of item 807.00, Tariff Schedules of the United States (TSUS), to polyester/cotton scrim substrate material that is exported in long material lengths and laminated abroad with foreign vinyl material. This was the subject of a previous ruling dated May 20, 1985, under file No. 553617.

After the lamination process, the material was trimmed to 54-inch widths during the final take up step and also cut to length to form 30-yard rolls of the imported material. Item 807.00, TSUS, was found applicable on the basis that such operations as cutting to length and trimming to width are generally considered incidental to an assembly process.

On the other hand, cutting the same material during take up after lamination to lengths of 10.67 yards and 27-inch widths was considered contrary to the assembly provisions of item 807.00, TSUS. Cutting the exported materials to length as well as width was considered a further fabrication of the exported materials.

It was stated in the memorandum that slitting similarly exported materials to width was considered an acceptable operation under item 807.00, TSUS, in a prior ruling dated April 20, 1982, 067694. In that ruling, the textile materials were exported in long material lengths in a single width of 100 inches. Slitting the material during the take up into narrower widths was permitted for ease of handling since the material was returned in the same long material lengths as exported from the United States.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

D9

However, it is still our position that cutting exported textile materials to length and width constitutes a fabrication that is contrary to the requirements of item 807.00, TSUS. As stated on many prior occasions, the requirement under the tariff provision that a component "be ready for assembly without further fabrication" dictates that the component be a finished article ready for assembly, except for the process of assembly itself and operations incidental thereto.

Jamaica, New York 11430

FROM : Chief, Value & Special Classification Branch

SUBJECT: Internal Advice Request No. 16/85, Concerning the Applicability of Item 807.00, Tariff Schedules of the U.S. (TSUS), to Certain Cable Assemblies made in Ireland from Domestic-made Components

FACTS:

The merchandise will be exported by AT & T Technologies, Inc., and consists of wire, tape, and twine on spools, and labels, spacers, displacement connectors, connector hoods, and dust covers. In the assembly of the D 4 Bank Cable the wire is laid on a cable board in accordance with specifications and instructions provided. After the cables are formed in the desired manner, the harness is sewn with twine and cable junctions are secured by tape. Identification labels are placed on the cable arms and each connector, and insulation is stripped from the wire leads. After inspection and testing the cables are packed for shipment. In assembling the miniature coax cables of numerous varieties, the wire is drawn from the spools, stripped of some insulation, and then attached to various termination components by crimping, labeled, and packed for shipment. In the case of all of the returned articles, the exporter will be the ultimate consumer.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

D11

ISSUE:

Is an allowance under item 807.00, TSUS, applicable to the domestic components assembled abroad into the cables?

LAW AND ANALYSIS:

We have viewed your submission including the exhibits and samples and have concluded that the components of United States origin are joined together by operations which qualify either as assembly or incidental to assembly.

CONCLUSION:

Accordingly, we are of the opinion that allowances may be made for the value of the exported fabricated components under item 807.00, TSUS, upon compliance with the regulations. In view of the fact that AT & T Technologies, Inc., is stated to be the ultimate consumer of the imported cables, the marking exemption provided for in section 134.32 (b), Customs Regulations should be applicable.

CORRESPONDENCE APPROVAL AND CLEARANCE

CIA-2 CO:R:CV:V
553798 EM

F. Gordon Lee, Esq.
O'Connor & Hannan
Attorneys at Law
Suite 800
1919 Pennsylvania Avenue, NW.
Washington, D.C. 20006-3483

Dear Mr. Lee:

In your letter of July 22, 1985, on behalf of Max Kahn Curtain Corporation, you asked about the applicability of item 807.00, Tariff Schedules of the United States (TSUS), to an assembly of certain draperies performed in Haiti from component materials of United States origin.

Samples were submitted. The exported component materials consist of precut-to-size face and lining fabric materials, and rolls of 4-inch buckram material which is used as a stiffener to support the drapes. The assembly operations consist of lining up the face fabric with the liner, with the buckram in between. In order for the buckram to serve as a support for the drapes, evenly-spaced pleats are made in the three materials, and all are vertically stitched together to support the hanging fabrics and prevent the drapes from drooping. It is stated that added strength is needed at the top to support the hanging draperies and in order to carry this out, vertical pleats are made by gathering the three component fabrics at the top and vertically stitching the fabrics together. The stitched pleats allow the drapes to hang correctly, without drooping between hanging hooks. The assembled drapes are finished by sewing the face and lining fabrics at the bottom to form a hem, and the completed drapes are returned to the United States.

With respect to foreign assembly operations, item 807.00, TSUS, applies only to fabricated United States components that are designed to be fitted with other components in an assembly process, with no operations performed thereon except the attachment of the components to form the imported articles and operations incidental thereto.

Generally, allowances may be made under item 807.00, TSUS, for fabric materials that are exported in certain lengths, assembled abroad, and returned in the same lengths. Although the pleats sewn into component garment fabrics have previously been determined to go beyond the meaning of the term "assembly" under the tariff provision when the only purpose served by the pleats was that of ornamentation, we believe that the described pinch pleats made in the exported fabrics are necessary to carry out, and are functionally related to, the assembly of the fabrics. The pleats serve to add strength and support to the assembled fabrics and, therefore, are considered incidental to the assembly.

D13

MAY BE RELEASED TO THE

Hemming the bottoms of articles is considered a finishing step that is of such a minor nature that it has traditionally been regarded as incidental to assembly. Further, joining the face fabric with only the buckram stiffener material at the top, without a liner, may be considered an assembly within the meaning of the tariff provision, since there is a joinder of two components. Hemming the bottom portion of the hanging drapes is of such a minor nature that it would be regarded as an operation incidental to the assembly.

Sincerely,

(Signed) RUSSELL ARNOLD

Luis Chavez, Esq.
Kemp, Smith, Duncan & Hammond, P.C.
Attorneys at Law
Post Office Drawer 2800
El Paso, Texas 79999-2800

Dear Mr. Chavez:

Re: IC No. 85-0022

In your letter of August 19, 1985, on behalf of W. S. Tyler, Inc., a subsidiary of Combustion Engineering, Inc. of Mentor, Ohio, you asked about the applicability of the Generalized System of Preferences (GSP) program to either brass or stainless steel testing sieves, proposed for manufacture in Mexico from materials of United States origin.

Samples and a manufacturing process description (MPD) with photographs were submitted. The sieves will be used for screening out particle size materials or separating liquid-contained materials in laboratories, mining companies, and similar industrial areas.

Sieve frames are first produced in Mexico from steel and brass blanks exported from the United States. The process involves press stamping the blanks into pie-plate shaped seamless hollow vessels and then punching out the bottoms in a die press. The upper edge of the shaped blanks is rounded off in a curling machine to produce rounded sieve frames.

Sieve skirts are made from a piece of wire mesh precut to desired shape and soldered to a rounded metal piece made from exported 32 in. strip to hold the mesh firmly. Sieve skirts are then soldered to sieve frames to produce finished sieves.

The completed sieves, shown in a round configuration in the photographs, consisting of sieve frames and assembled mesh skirts, are finish buffed to a luster, sprayed with a paint lacquer, and inspected. Before being packed in containers for return to the United States, however, two small evenly spaced holes are drilled in the sieves to hold a nameplate which is riveted in after return from Mexico.

With respect to the GSP question raised in your letter, in order to be regarded as a material produced in a beneficiary developing country and subject to the 35 percent criterion, the materials must either be produced in the beneficiary country or produced from substantially transformed constituent materials. A material imported into a BDC must be

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E1

substantially transformed into a new article of commerce that is different from the material imported and which is used in the manufacture of the eligible article. The substantial transformation of the article imported into the BDC must result in an intermediate new material or article which is then used in producing the eligible article that is imported directly into the United States.

In this respect, the value of the brass or stainless steel blanks which are substantially transformed into sieve frames may be included in the 35 percent value-added requirement under the GSP. The sieve frames become a constituent element of the eligible testing sieves which are exported to the United States.

However, the exported mesh material and the metal in the sieve skirts directly used in making the imported sieves, are not substantially transformed constituent materials. The value of the metal material contained therein cannot be included in determining the 35 percent value-added requirement. Of course, all direct costs of processing may be included.

Sincerely,

(Signed) RUSSELL L ARNOLD

OCT 16 1985

CLA-2 CO:R:CV:V
553807 EM

Mr. Adolfo Loera
Consultant
Twin Plant Customs Consultant
and Services
6044 Gateway East, Suite 506
El Paso, Texas 79905

Dear Mr. Loera:

In your letter of August 15, 1985, on behalf of Components Electricos de Lamparas of Juarez, Mexico, you asked about the applicability of item 807.00, Tariff Schedules of the United States (TSUS), to a certain "flock tip" assembly used as a component of a lipstick applicator, and made in Mexico from components of United States origin.

A sample flock tip was submitted. The exported components are described as a plastic tip, nylon flocking, and glue. In the assembly process, the exported plastic tips are first dipped in glue and then passed through a process of blowing the flocking material onto the tips. Excess flocking is removed and the glue is dried. Loose flocking is removed after drying and the flocked tips are packed for return to the United States.

With respect to articles assembled abroad, item 807.00, TSUS, applies only to fabricated United States components that are designed to be fitted together with other components in an assembly process, with no other operations performed thereon except the attachment of the components to form the imported merchandise.

On the basis that there is no assembly of components designed to be fitted together in an acceptable process, no allowances can be made for any of the exported components. The nylon flocking material is exported in a loose condition and is not designed for fitting together in an assembly. Glue loses its physical identity in the process and no allowances can be made for the exported plastic tips in the absence of an assembly of parts having taken place abroad. Accordingly, item 807.00, TSUS, remains inapplicable in the circumstances.

Sincerely,

(Signed) RUSSELL ARNOLD

Richard A. Kaplan, Esq.
Lamb & Lerch
Counsellors at Law
233 Broadway
New York, New York 10279

Dear Mr. Kaplan:

In your letter of August 27, 1985, on behalf of Prevue Products, Inc., you asked about the applicability of item 807.00, Tariff Schedules of the United States (TSUS), to certain styles of footwear, which are proposed for assembly in the Dominican Republic from components of United States origin.

Both partially and completely assembled articles of ladies' footwear, identified as Denise and Davos style boots, as well as component parts used in the assembled boots were submitted. The finished footwear is described as rubber or molded plastic soled boots with uppers made of fabric, plastic, or leather. In any event, the components forming the uppers will be sewn together in the assembly process and all components such as the shaft, vamp, quarter, collar, and lining components will be pre-cut to size-and-shape before exportation. Other components such as tapes, string, findings, etc., which are exported on spools or rolls, will be merely cut to needed length abroad. It is stated that thermoplastic pellets will be exported and injection molded to form plastic soles which will be assembled to the uppers to form completed boots. Buckles, rivets, and plastic heel plugs or inserts will be exported in condition ready for assembly.

It is stated that all components of the uppers will be assembled by stitching, cementing, and heatpressing in accordance with specifications for particular style boots. The completed stitched upper is secured over a last in an injection molding machine. Cement is placed on the bottom margin of the upper in order to effect adhesion with the molded plastic outsole. The bottom portion of the last is enclosed by a cavity mold. The exported plastic pellets are melted to a viscous state and injected into the mold cavity to form the outsole which is pressed to the upper, causing the cement-coated upper to adhere to the molded outsole. The plastic heel plug or insert is used to produce a higher wedge heel in a protrusion on the base of the last and is permanently held in place and encapsulated by the molten plastic. Upon cooling and adhering to the upper, the heel plug becomes an encapsulated part of the upper/outsole assembly. The molded boot is removed from the mold and last, trimmed and deflashed of excess plastic. An insole is inserted into the boot and the remaining components such as straps and buckles, are assembled to the

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E4

finished boot after the molding, lasting process. The boots will then be sealed in shipping cartons exported for that purpose, along with packing tissue, stuffers, and labels of domestic origin and returned to the United States.

With respect to foreign assembly operations, item 807.00, TSUS, applies only to fabricated United States components that are designed to be fitted together in an assembly process, with no operations performed thereon except the attachment of the components to form the imported articles and operations incidental thereto.

On the basis of the samples and the description of the assembly process submitted, allowances may be made under item 807.00, TSUS, for all components forming the uppers, that are of United States origin and exported in a cut-to-size-and-shape condition. Tapes and similar materials exported on spools or rolls are regarded as fabricated components ready for assembly when exported. Allowances may also be made for the exported plastic heel plug which retains its identity as an exported fabricated component and is merely fixed in position throughout the process. No allowances can be made under the tariff provision for the exported thermoplastic pellets that are reduced to a molten state and injection molded into outsoles for the reason that the pellets have lost their physical identity by a change in form or shape in the molding process.

Containers or holders, including packaging materials, of United States origin may be returned free of duty under the provisions of General Headnote 6(b)(i), TSUS, as the usual type containers or holders that have not been advanced in value or improved in condition by any means while abroad.

The classification of the respective styles of boots will be the subject of a separate reply from our General Classification Branch.

Sincerely,

(Signed) RUSSELL ARNOLD

SEP 25 1985

CLA-2 CO:R:CV:V
553828 EM

Mr. Timothy J. Manning
Fabex, Inc.
27950 Orchard Lake Road, Suite 101
Farmington Hills, Michigan 48018-4783

Dear Mr. Manning:

In your letter of September 4, 1985, you asked about the applicability of item 806.30, Tariff Schedules of the United States (TSUS), to certain copper-coated steel strip that will be exported to Mexico for processing into tubing and returned to the United States for further processing.

Samples were submitted. Small diameter steel tubing is used in the automotive industry. Upon return to the United States, the tubing will be zinc plated on the outer surface area and cut into specific lengths. Fittings will be assembled on the cut ends and the tubing will be bent to special shape and form, depending upon final use. The ends of the tubing will also be flared or upset.

With respect to a duty allowance for articles of metal made abroad from United States-made base metal, item 806.30, TSUS, requires further processing to be performed on exported articles both in the foreign country and again upon return to the United States. In order to meet the requirements of "further processing," some operations must be applied to the metal articles that will change their shape or form or impart new and different properties and characteristics to the metal that did not exist before and which become an integral part of the metal itself.

On the basis that steel strip of United States origin is exported and converted into tubing which is returned for further processing by plating, cutting to length, flaring the ends, and bending to special shape and form, it appears that both the foreign and domestic segments of the processing cycle are met. In these circumstances, we are of the opinion that the processing requirements are satisfactorily complied with and the imported tubing is eligible for item 806.30 tariff treatment, upon compliance with the regulations.

Sincerely,

(Signed) RUSSELL ARNOLD

CORRESPONDENCE APPROVAL AND CLEARANCE Form 180 (11-13-73)

NOV 21 1985

CLA-2 CO:R:CV:V
553835 EM

District Director of Customs
U.S. Customs Service
Patrick V. McNamara Bldg.
477 Michigan Avenue
Detroit, Michigan 48226-2528

Dear Sir:

This ruling is in response to the Application for Further Review of Protest No. 3801-2-002051 of December 21, 1982. The protest was filed against the decision in the liquidation of entry No. 82454896 dated June 11, 1982. The entry was liquidated on December 17, 1982.

ISSUE:

The question raised concerns the applicability of item 806.20, Tariff Schedules of the United States (TSUS), to a certain article referred to as an air ring that was exported to Canada as part of a plastics die assembly for repairs.

FACTS:

The air ring as part of a die assembly was foreign made and both the air ring and die assembly were exported to Canada in separate shipments and listed on separate Certificates of Registration CF 4455 but reimported together. Both are components of blown plastics film processing equipment producing extruded film. Air rings rotate in conjunction with dies. A 22-inch die was exported for re-design and a 22-inch aluminum body lip air ring was later exported upon discovering that they were not exported together since one cannot operate without the other. The air ring was exported for the purpose of testing the redesigned die and no work was done on the air ring while it remained in Canada. Both were returned in the same shipment.

E9

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

The district director believes that testing alone does not fall within the purview of item 806.20, TSUS, and the value of the air ring should be dutiable as part of the value of the repairs. The importer takes the position that the air ring should be entered free of duty under item 806.20, TSUS. Duty should be assessed only on the cost of the repair work done on the die in Canada.

LAW AND ANALYSIS:

Under item 806.20, TSUS, articles exported for repairs or alterations may be returned to the United States with duty on the foreign value of the repairs or alterations.

On the basis of the information submitted, an air ring and film die are generally fitted together since the die has to fit the ring in an exact manner. The ring is necessary for proper functioning of the die since the ring supplies cooling air for the outer surface of the film and, unless cool air is delivered to the die, the film will not form properly during the extrusion process.

Although the air ring and die are both classifiable as parts of machines for molding or otherwise forming plastics, the air ring was nonetheless necessary for precise testing of the redesigned die and to establish precise fit with the air ring. There was no other means for determining whether the die would be a proper fit in the absence of the ring. The fact that the ring was not repaired in Canada does not preclude its return under item 806.20, TSUS, since the repair was done to the die but the presence of the ring was necessary for successful completion of the repair work performed.

55 3835

E10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

CONCLUSION:

If there was no physical change or enhancement of value of the ring, the work being performed exclusively on the die, the ring should not be denied free entry as part of the repaired entity under item 806.20, TSUS.

Accordingly, you are hereby requested to grant the protest in full. A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant. The protest file is enclosed.

Sincerely,

Russell Arnold

Mr. Edward Azizi
Wego Chemical & Mineral Corp.
417 Northern Boulevard
Great Neck, New York 11021

Dear Mr. Azizi:

Your letter of August 13, 1985, addressed to our New York office, has been referred to us for reply on tariff status of electrical wire of United States origin which is attached to lamp sockets made in China.

Item 807, Tariff Schedules of the United States, provides for an allowance in duty for the cost or value of domestic fabricated components assembled abroad with other components.

On the basis of the samples and information submitted, allowances may be made under the statute for the value of the exported wire which is merely cut to length and attached to the sockets, upon compliance with the regulations.

Sincerely,

(Signed) RUSSELL ARNOLD

553838 EM

Mr. John M. Ryan
Customs Administrator
Transportation Department/3M
3M Center
Post Office Box 33250
St. Paul, Minnesota 55133

Dear Mr. Ryan:

In your letter of August 27, 1985, you asked about the applicability of item 807.00, Tariff Schedules of the United States (TSUS), to certain merchandise referred to as a treble lock fastener device made in Mexico from component materials of United States origin.

Samples and a description of the fastener assembly process were submitted. The device is described as a hook and loop fastener system designed for attaching automotive seat covers to foam seat cushions. The fasteners are attached to seat cushion material by either an adhesive bonding or molding-in-place during the seat foaming process and are said to mate to loop fiber materials on the inside of seat covers. The fasteners consists of multiple protruding, plastic grapple-like hooks that lock into any one of a variety of loop materials.

The finished part is described as a lock fastener mounted on a nonwoven low-density web and covered with a protective film component, ready for use in the construction of foam cushions. Exported components are listed as a roll of plastic film backing about 6 1/4 in. wide, and spools of polypropylene filament material, metal strip 1/2 in. wide, nonwoven web strip 1 3/4 in. wide, peltable thin plastic cover film, resin pellets, and a quantity of a hot melt adhesive substance.

Briefly, the fastener assembly process is made in a series of three stages, the first of which is the filament implanter line whereby two parallel strips of carrier backing are implanted with fibers and then separated along the fiber line into two separate implanted carrier backings, the hook formation stage of the implanted fibers, and the final stage of laminating between rollers the hook fastener material to both a nonwoven web and an embedded metal strip, all overlaid on the top with a thin clear peltable plastic cover film. The final product would either be seated in a specially designed cavity mold, with poured liquid urethane foam surrounding the bottom of the mold to form a finished foam cushion with a molded-in hook fastener; or, the hook fastener product can be bonded to a preformed seat cushion by an adhesive coating applied to both a nonwoven mat and a seat cushion surface.

E13

In making the initial basic hook fastener material, the fiber filament is looped back and forth between parallel upper and lower layers of heat-softened, viscous backing material and then separated by cutting horizontally through the looped fibers between the strips to form two backing strips, each with multiple implanted fibers. The strips are again heated to a temperature that causes the tips of the fibers to melt, creating round lobes or hooks on the ends, and cooled to halt any further deforming of the tips of the implanted fibers. The fiber-implanted strips are passed through a series of knives, which slit the material into strips 7/8 in. wide.

553838

In the final stage, the remaining exported components are processed by laminating the hook fastener material to a nonwoven web strip, with a strip of metal in between, and overlaid with a thin plastic cover film. Resin pellets are extruded into a backing joined with the metal, web, and fastener strips in a continuous line process to form a one-piece component. The final step may consist of sealing the assembled component within a mold cavity and pouring liquid urethane foam into the bottom of the mold. The result is a cured, finished urethane foam seat cushion, with a molded-in lock fastener on the surface. The clear plastic cover film on the top of the fastener prevents the liquid foam from leaking into the fastener hooks.

The underside of the moving lock fastener laminated strip is printed with specific automotive part numbers, cut into specific lengths, and packed for return shipment.

With respect to assembly operations, item 807.00, TSUS, provides for an allowance in duty for the cost or value of domestic-made fabricated components that are exported in condition ready for assembly without further fabrication.

On the basis of the samples and descriptions submitted, allowances may be made under the tariff provision for the value of the exported nonwoven web and metal strips, and the plastic cover film. These materials are exported on rolls and merely cut to length to facilitate the assembly. No allowances, however, can be made for the spool of polypropylene fiber material and the roll of plastic film backing which acts as the vehicle for the manufactured fastener hooks. Making fibers into hooks is not an assembly operation and cutting the plastic backing material into 7/8 in. wide strips and final cutting to specific lengths are operations beyond the province of item 807.00, TSUS. Cutting exported material to length and width is not considered incidental to assembly. Nor can allowances be made for the resins and adhesives since they lose their physical identity in the finished articles.

Sincerely,

(Signed) RUSSELL ARNOLD

William F. Joffroy, Jr.
Twin Plant Consulting Services
Post Office Box 2496
Nogales, Arizona 85621

Dear Mr. Joffroy:

In your letter of August 29, 1985, you inquire whether the plating of a can and lid in connection with the assembly of a filter in Mexico would preclude the application of item 807.00, Tariff Schedules of the United States (TSUS).

You state that the articles are plated with a nickel-copper alloy to protect them from rusting and to permit them to be soldered. You believe that the plating process should be considered incidental to the assembly operation.

One of the requirements of item 807.00, TSUS, is that the domestic fabricated components be ready for assembly without further fabrication at the time of exportation. Minor conformity painting and similar proceses are allowed as incidental if they must be accomplished in connection with the assembly.

We are of the opinion that the plating of the can and lid under the circumstances described is not a minor operation which must be performed as part of the assembly process. Accordingly, it cannot be considered as incidental to assembly and would be sufficient to disqualify the plated components from tariff treatment under item 807.00, TSUS.

Sincerely,

(Signed) RUSSELL ARNOLD

TO THE

F1

OCT 0 1 1985

CLA-2 CO:R:CV:V
553843 EM

Mr. John M. Ryan
Customs Administrator
3M Center
Post Office Box 33250
St. Paul, Minnesota 55133

Dear Mr. Ryan:

In your letter of September 6, 1985, you asked for information about the tariff status of rolls of ribbon material, referred to as "Pull String Pom Bow," which you propose to export to Mexico for cutting into individual bow units and packaging in cartons for return to the United States.

The sample is a man-made ribbon that is notched into 4 1/2 or 6 in. evenly spaced segments, depending upon ribbon width. Each bow unit consists of a specific number of notched sections which are fastened together at one end with a single glue dot and open at the opposite end. A drawstring runs lengthwise through the center of the notched ribbons. Bows are formed by pulling the drawstring through the unsealed end while pushing the segmented ribbon downward in bellow-like fashion. The bow ribbon product is sold either in rolls, cut into separate bow units, or in boxes of precut individual bow units.

It is proposed to export rolls of the notched bow ribbon material to Mexico for cutting into individual bow unit lengths, folding, and packaging into cartons of 40 bows each, and return to the United States.

Products of the United States may be returned free of duty under item 800.00, Tariff Schedules of the United States (TSUS), without having been advanced in value or improved in condition by any process of manufacture or other means while abroad. The test specified under the statute is whether the merchandise of American origin has itself been the object of an advance in value or improvement in condition while abroad. Cutting the exported material to shorter lengths constitutes at least an improvement in condition, sufficient to render the imported material ineligible for free entry under the tariff provision.

On the other hand, with respect to the described alteration, item 806.20, TSUS, provides that articles may be exported for repairs or alterations and returned to the United States with duty assessed on the value of the repairs or alterations made abroad.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

52

On the basis that the bow ribbon product is sold either in rolls or boxes of individual bow units, no new commercially different articles are produced by the foreign cutting and a finished product does not result from an unfinished one. Bow ribbon material is both exported and returned but in shorter lengths. In this view, the foreign cutting constitutes an alteration and tariff treatment under item 806.20, TSUS, is applicable to the imported articles, upon compliance with the regulations.

Sincerely,

(Signed) RUSSELL ARNOLD

Mr. I. Bier
Thyssen Inc.
1114 Avenue of the Americas
Grace Building
New York, New York 10036

Dear Mr. Bier:

In your letter of September 18, 1985, you inquired concerning the applicability of item 806.30, Tariff Schedules of the United States (TSUS), to certain steel tubing made in Mexico.

You state that hot rolled and cold rolled carbon steel produced in the United States will be converted abroad into structural and ornamental tubing. After importation into this country the tubing will be sold to distributors who will sell it to end users who will cut it into fixed lengths and weld it into machine parts. in turn

Item 806.30, TSUS, requires that the metal article processed abroad be further processed when returned to the United States. This further processing must be designed to complete the imported article and not be merely incidental to the use of the article for its intended purpose.

Based upon the information submitted, it appears that the steel pipe is in a finished condition when imported and the subsequent cutting and welding is performed to adapt it to the attachment to specific machine parts. As the statute does not apply to finished articles and since the cutting of the subject pipe is not to finish it but to utilize it in manufacturing parts, it cannot be considered as further processed after return to the United States.

Accordingly, the imported pipe in question would not be eligible for tariff treatment under the provisions of item 806.30.

DEPARTMENT OF THE TREASURY

U.S. CUSTOMS SERVICE

WASHINGTON

NOV 19 1985

REFER TO
CLA-2 CO:R:CV:V
553849 HS

Stephen L. Urbanczyk, Esq.
Williams and Connolly
839 Seventeenth Street, NW.
Washington, D.C. 20036

Dear Mr. Urbanczyk:

This is in response to the petition you filed with the Customs Service pursuant to section 516(a), Tariff Act of 1930, as amended (19 U.S.C. 1516(a)), on behalf of the National Corn Growers Association, New Energy Company of Indiana, Ohio Farm Bureau Federation, Inc., South Point Ethanol, and Archer Daniels Midland Company. The petition challenges Customs view that azeotropic distillation of up to 190 proof ethanol in a beneficiary country of the Caribbean Basin Initiative (CBI) program to 199+ proof ethanol makes the 199+ proof ethanol a product of the CBI beneficiary country entitled to duty-free treatment.

This response, written pursuant to 19 U.S.C. 1516(c) and 19 CFR 175.22(b), is to notify you that we have reviewed your petition, your additional submissions, and all other submissions received as the result of our notice published in the Federal Register on April 11, 1985, (50 F.R. 14250) and have determined that the Customs classification is correct.

Over 45 comments were submitted in response to the published notice. Many of these comments discussed policy issues regarding the Caribbean Basin Initiative. However, it is our view that there is only one controlling issue in this case: whether azeotropic distillation of 190 proof ethanol to 199+ proof ethanol is a substantial transformation.

It is argued by the petitioner and other commenters that the azeotropic distillation process neither creates a new or different article of commerce nor involves substantial processing.

A brief description of the azeotropic distillation process is as follows:

> At 190+ proof, ethanol will have formed an azeotrope with water and other impurities that must be removed before the ethanol can sucessfully be blended with gasoline to make gasohol. As an azeotrope is a

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

FS

constant boiling point liquid, traditional distillation processes are ineffective to break the azeotropic system. Thus, to produce ethanol suitable for blending to make gasohol, the azeotrope must be "cracked" using a Ternary Azeotropic Distillation process, whereby a third chemical is added to the ethanol solution to form a new mixture. This chemical is called an entrainer and is usually benzene, although cyclohexane, di-isopropyl ether, and gasoline have also been used. The entrainer forms a ternary azeotrope which is mainly water and benzene with a boiling temperature different from water. This temperature varies widely with the relative concentrations of ethanol, entrainer, and water. In addition, flow rates and pressures become critical control variables. Once the ternary azeotrope solution is separated from the ethanol, its vapors are condensed and sent to another distillation column to separate the benzene and trace amount of ethanol from the water.

Among the arguments set forth as to why 199+ proof ethanol is not a new and different article of commerce than ethanol of up to 190 proof are: (1) there is no chemical change between the 190 proof and 199+ proof alcohol -- the only difference is that water is removed; (2) there is no clear distinction between hydrous and anhydrous ethanol for many industrial uses; and (3) hydrous ethanol is used in Brazil as motor fuel.

It is Customs view that the extra 5 percent water that is missing from the anhydrous ethanol which causes the difference in specification is significant enough to make the anhydrous a new or different article of commerce. It is the absence of water that makes 200 proof ethanol suitable for particular uses, while it is the presence of water that makes 190 proof ethanol unsuitable for those same uses. Also, 190 and 200 proof ethanol have different freezing points, boiling points, densities, viscosities, vapor pressures and flash points.

Further evidence that 190 proof and 200 proof ethanol are different articles is the price differential between the two. For the past year, the Chemical Marketing Reporter has stated that the price of tax-free absolute ethanol is 12 cents per gallon higher than that of 190 proof tax-free ethanol. There is a price difference of about 8 percent. A price difference of about 5 percent is to be expected since the anhydrous product contains 5 percent more alcohol, but a price difference of 8 percent reflects, in part, the additional dehydration steps involved. By way of comparison, the price difference between two different grades of glycerine (99.5

553849

THIS DOCUMENT MAY BE RELEASED TO THE

percent and 96 percent) correlates almost exactly with the glycerine content of each, reflecting the fact that here the purer grade is subjected to a longer, but not a different, purification process.

Regarding the claim that 190 proof ethanol is used as motor fuel, the Brazilian government built a fleet of motor vehicles that used 190 proof ethanol as a defense against rising oil prices, but those vehicles and others like them were specially designed for that use. The modifications needed to enable the average car in the United States to use 190 proof ethanol would be more than minor and such vehicles are not commercially available in the United States.

In the United States, gasohol can have a maximum of 10 percent anhydrous ethanol according to EPA regulations. Only absolute ethanol can be blended with gasoline and technical references examined by Customs indicated that for ethanol to be blended with gasoline, to make gasohol, the entire fuel delivery system from refinery to tank trucks to undergound tanks in filling stations, must be dry. Water, even a small amount, will "split" the blend, causing the blend to separate into an aqueous phase and a hydrocarbon phase. Accordingly, it is Customs view that anhydrous ethanol has a use in the United States -- for blending to make gasohol -- that hydrous ethanol will not serve. While hydrous and anhydrous ethanol may both serve some industrial uses, our research reveals that anhydrous ethanol even when used for industrial purposes is used generally for purposes where water cannot be tolerated, such as in certain chemical manufacturing processes and for certain solvents.

The arguments that azeotropic distillation is not a substantial processing operation are that (1) dehydration is merely the opposite of dilution and dilution is clearly not considered a sufficient operation to entitle an article to duty-free treatment pursuant to section 10.195, Customs Regulations; (2) azeotropic distillation is just a simple boiling and cooling procedure; (3) the process does not require many workers; (4) the incremental capital, energy and labor requirements are miniscule when compared with the total cost of converting agricultural feedstock to ethanol, and (5) there is no significant distinction between proof enrichment from 194-199+ and from 190-199+, and Customs has ruled that enrichment from 194-199+ would not be sufficient to entitle the ethanol to duty-free treatment.

It is Customs view that if removal of water were to be considered per se an operation not sufficient to entitle an article to duty-free treatment under the CBI, it could have

553849

F1

been listed in the statute or regulations as easily as dilution was listed. Further, the addition of water to a product is generally a much more simple process than removing water.

Azeotropic distillation is more than a simple boiling and cooling procedure. The process involves complex equipment, sensitive instruments and trained personnel. In the particular operation challenged in this petition, the equipment includes a dehydration column over 150 feet high and 7 feet in diameter, over sixty stainless steel trays, each with nearly a hundred valves, plus weirs and downcomers, all manufactured to exacting standards. The Entrainer Recovery Column is 90 feet tall, 3 feet in diameter with nearly 60 stainless steel valve trays of its own. There are reboilers, heat exchangers, condensers, reflux tanks, decanters, surge tanks, vents, interconnecting piping, instrumentation, valves, pumps, meters, structure and mechanical systems required to maintain these columns.

In Uniroyal, Inc. v. United States, 542 F Supp. 1026, 3 CIT 220, aff'd 702 F2d 1022 (Fed Cir. 1983), the court stressed that factors such as cost and skill can be considered in determining whether a substantial transformation has occurred. In this case, the personnel must be trained to correctly monitor the azeotropic distillation process, and there has been an ample capital investment.

According to one comment, the drying process, per se, is not complex. Any complexity associated with the ternary distillation and directly associated process steps is in the design of the equipment and control apparatus. It is our view that the technical nature of the design of the equipment and the skill required of the workers to operate and monitor the system is of sufficient complexity to take the operation out of the simple combining, packaging or mere dilution categorization. While the number of workers involved in any specific operation is a factor to be considered in determining whether a substantial processing operation has occurred, it is not a controlling factor. In this particular case, we believe that the amount of local employment involved in the operation would not deter us from finding substantial processing.

We do not agree with the argument that the conversion of 190 proof ethanol to absolute ethanol is a minor step in the manufacture of ethanol from grain and therefore cannot be a substantial transformation. Obviously, the relative cost of

553849

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

F8

any one step in an overall process will decrease as the number of steps increases. Further, each operation must be examined on its own as to whether it is a substantial transformation.

Finally, Customs holding in a General Headnote 3(a) case that there is not a substantial transformation when ethanol of 194 proof is brought up to 199+ proof through azeotropic distillation was based on the fact that an entire azeotropic distillation operation was not occurring in the insular possession. Customs looks at all operations on a case-by-case basis in determining whether substantial transformation occurs. In the particular case where an operation was proposed to make ethanol anhydrous from a level of 194 proof, it was Customs view that since a partial azeotropic distillation operation had already occurred, merely finishing the azeotropic distillation operation in the insular possession would not be sufficient to make the 199+ proof ethanol a product of that insular possession. In this instance an entire azeotropic distillation operation is occurring in the beneficiary country.

In summary, after reviewing the petition, supplemental submissions and all the comments received, Customs has decided to continue to consider the azeotropic distillation of up to 190 proof ethanol to 199+ proof ethanol in a beneficiary country of the Caribbean Basin Initiative a substantial transformation of the ethanol making the 199+ proof ethanol a new and different article of commerce entitled to duty-free treatment.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

553852 EM

Luis Chavez, Esq.
Kemp, Smith, Duncan & Hammond, P.C.
Attorney at Law
Post Office Drawer 2800
El Paso, Texas 79999

Dear Mr. Chavez:

In your letter of September 27, 1985, on behalf of W. S. Tyler, Inc., a subsidiary of Combusion Engineering Inc., referred to as C. E. Tyler, you asked for information about the tariff status of certain pre-crimped metal mesh screens that are proposed for manufacture in Mexico from component metal wire of United States origin.

An assembly process description and photographs were submitted. The mesh screens are used in separating materials of different sizes and are used in mining, gravel pit operations, quarries, laboratories, and other places requiring a sifting of materials.

Coiled wire stock is exported in various diameters, ranging up to .500 in. and is drawn through a vertical crimper that causes vertical humps or waves to be impressed at spaced intervals along its length and the wire so crimped is sheared to proper length. The vertical wire is pulled through a wire assembly machine and positioned by changing heddles which raise and lower the vertical wire for insertion of a similar horizontal die-crimped wire, which when completed forms a mesh size in accordance with a fixed width and the number of openings per linear inch of mesh. The finished mesh is either rolled or sheared to special length by an acetylene torch for return shipment to the United States.

Upon return to the United States, the imported rolls of wire mesh or flat lengths are squared to correct size by means of a torch. Further operations consist of knocking out either one or two horizontal wires from the ends, called pickets in the assembly description, and heating the sheared ends of a section in a furnace to a red, softened state, and forging the softened ends into hooks by a machine process called hook stripping the ends. The formed ends (pickets) may remain as hooks or a metal piece may be inserted across the interior of the hooked ends during the process.

With respect to item 807.00, Tariff Schedules of the United States (TSUS), this provision only applies to United States components that are exported in condition ready for assembly without further fabrication. However, the crimping and shaping of the exported wires before meeting up in an assembly are regarded as further fabrications and show that the wires are exported in a condition not ready for assembly. In this respect, the applicability of item 807.00, TSUS, to the imported mesh material would be precluded in the circumstances.

FID

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

On the other hand, item 806.30, TSUS, applies only to articles of base metal of United States origin that are processed abroad and then further processed on return. This further processing must be designed to complete the imported article and not be merely incidental to the use of the article for its intended purpose.

Based upon the information submitted, both the forming and shaping of the wire abroad and the described squaring the sides, furnace heating, and hooking the ends of the cut sections upon return to the United States appear to be a sufficient processing of the mesh material to qualify the imported mesh for item 806.30 tariff treatment.

With respect to the GSP question raised in your letter, the exported wire used in making the mesh material is not a substantially transformed constituent material. Merely die-crimping the wire into humps and waves along its length does not transform the wire into a new and different article. The value of the wire contained in the mesh material cannot be included in determining the 35 percent value-added requirement.

Sincerely,

(Signed) RUSSELL ARNOLD

OCT 11 1985

DATE:

FILE: CLA-2 CO:R:CV:V
553855 RG

TO : Area Director of Customs
New York Seaport
New York, New York 10048

FROM : Director, Classification and Value Division

SUBJECT: Request for Reconsideration of Headquarters Ruling 553522 HS

This is in response to your memorandum which requests reconsideration of Headquarters Ruling 553522 HS dated March 26, 1985. The decision letter classified a folding screen painted by Giacomo Balla under the provision for paintings executed wholly by hand in item 765.03, Tariff Schedules of the United States (TSUS), and therefore, not subject to duty.

You contend that the article is capable of being used as a screen, and the fact that the importer does not intend on using it as such is irrelevant. You rely upon Headquarters ruling 553140 which indicates that Headnote 1(iv) to Subpart A, Part 11, Schedule 7, TSUS, specifically precludes from coverage under any of the provisions therein any articles of utility. However, any utilitarian purpose or characteristic that can be attributed to the screen in question is outweighed by the elaborate paintings. The screen is merely being used as a background for the presentation of the artist's work.

The determination of whether the article can be considered under the "works of art" provision of the TSUS, is done on a case-by-case basis. In the instant situation, it is our opinion that the artist merely chose a familiar utilitarian form for which to present his work. This fact alone will not exclude the screen from the status of a painting and work of art. As stated by the court in Sanji Kohata et al. v. United States, C.D. 4213 (1971), an examination of the artistic merit of the article is a factor to consider. The artistic merit of the Giacomo Balla screen is substantial and contributes highly to the beauty and aesthetic value of the merchandise.

It is not necessary to reiterate the arguments set out in our prior decision letter. In view of all the circumstances, our opinion with respect

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

F12

to the Giacomo Balla screen has not changed. The folding screen is classifiable under the provision for paintings executed wholly by hand in item 765.03, TSUS, and not subject to duty.

Sincerely,

(Signed) Harvey B. Fox

Harvey B. Fox
Director, Classification
and Value Division

553855

OCT 22 1985

CLA-2 CO:R:CV:V
553880 EM

Mr. Alan M. Sandperil
President
Capital Metals, Inc.
P.O. Box 6647
Providence, RI 02940

Dear Mr. Sandperil:

In your letter of October 11, 1985, you asked about the applicability of item 806.30, Tariff Schedules of the United States (TSUS), to cold rolled steel strip in coil form that you propose to export to certain European Common Market countries for processing and return to the United States for further processing into finished consumer products.

It is proposed to export either hot or cold rolled steel strip in coil form. The foreign processing would consist of a line operation of first cleansing the metal and passing it through an electrolytic solution for electroplating with either nickel, brass, copper, or chrome, followed by rinsing and polishing. In some cases, the electroplated steel strip would be slit into narrow widths before return to the United States. Exported hot rolled steel strip would first be cold rolled to a required thickness in the foreign process before undergoing the same operations as cleaning, electroplating, polishing, and slitting into narrower widths.

Upon return to the United States, the steel strip would be sold to various manufacturers for producing such end products as flashlight battery cans, picture frames, three-ring metal loose-leaf binders, jewelry findings, fireplace fixtures, etc.

Item 806.30, TSUS, applies to articles of metal that are exported for further fabrication in a foreign country and again processed upon return to the United States, with duty assessed on the value of the foreign processing, upon compliance with Customs regulations.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

[redacted]

F14

On the basis that the exported hot or cold rolled steel strip is of United States origin and will be processed abroad by electroplating with nickel, brass, or chrome, and further fabricated upon return to the United States into finished forms of metal products, all appear to be adequate operations sufficient to comply with the further processing requirements of item 806.30, TSUS.

However, with regard to the steel strip that is returned to the United States for sale to, and further processing by, unknown purchasers, the area or district director of Customs must determine from the overall circumstances of the transaction whether the metal would be returned for further processing in the manner and for the uses described. The mere expectation that the exported metal will be further processed by unknown customers in the undetermined future leaves open the speculation that the full cycle of processing might never take place, contrary to the tariff provision. This is the framework of compliance with the regulations within which the importer of the metal must operate. There can be no blanket endorsement of compliance without following the prescribed steps.

In the final analysis and in accordance with the rules and regulations, the question of whether claims for item 806.30 tariff allowances are justified by the facts rests ultimately with the area or district director of Customs. In this regard, see section 10.9 of the Customs Regulations, copy enclosed.

Sincerely,

(Signed) RUSSELL ARNOLD

Indianapolis, Indiana 46206-1976

Dear Mr. Allen:

In your letter of October 8, 1985, you asked about the applicability of item 807.00, Tariff Schedules of the United States (TSUS), to certain ceramic yoke ferrite cores which are exported to Mexico to be scored, cracked, and assembled into a deflection system of color cathode ray tubes and returned to the United States.

Samples and photographs depicting the cracking process were submitted. The round ceramic yoke cores are manufactured in the United States and exported to Mexico where they are assembled into color television yokes which in turn are returned to the United States for final assembly into complete color television receivers.

The exported cores are scored in Mexico by a small diamond wheel which scribes or scratches the inside of the core in order to crack the core into precise equal halves. The core is heated to a certain temperature for twenty seconds by infrared lamps and cracks into two equal halves along the scribed lines on the inside delineated by the groove on the outside of the core. The two halves are wound with copper wire and assembled with other components into a deflection system of color cathode ray tubes.

With respect to components exported for assembly and return, item 807.00, TSUS, provides for United States components that are designed to be fitted together in an assembly process, with no operations performed thereon except attachment of the components to form the imported merchandise and operations incidental thereto.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

[redacted]
G2

On the basis of the samples and information submitted, so long as there are delineated grooves on the cores, showing where the scribing and breaking of the exported cores are to take place along determinable and controlled lines, in these circumstances the scribing and breaking may be considered incidental to assembly. The lines of separation between the halves are clearly defined by grooves in the cores before exportation, and scribing the cores between the control points of reference, followed by breaking or cracking in the heat process described, along the scribed lines, may not be considered a further fabrication of the cores within the meaning of item 807.00, TSUS.

Sincerely,

(Signed) RUSSELL ARNOLD

Mr. David Blutas
Supervisor, International Traffic
Westinghouse Building
Gateway Center
Pittsburgh, Pennsylvania 15222

Dear Mr. Blutas:

This is in response to your letters of May 3, 1985, requesting rulings on the eligibility of certain printed circuit boards for duty-free treatment under the Caribbean Basin Initiative (CBI).

Bare glass base circuit boards are manufactured in Puerto Rico. The discrete components for the circuit boards are procured in the United States and sent to Puerto Rico where the components are separated into manufacturing kits. The kits are sent to an unrelated subcontractor in Haiti where the following occurs.

1. Components are checked and identified. Each component is manufactured into the bare glass base circuit board according to specific drawing requirements. Intricate tools are used to trim component leads to exact lengths and to form them to specific shapes as necessary.

2. The bare circuit board is mounted in a holding rack and operators proceed to mount and assemble the various components in the proper locations of the bare circuit board following blue prints. Intricate tools are used in the assembly process. When required, terminal parts are pressed into the bare circuit board by using a hand bench press.

3. The bare circuit board with all basic discrete components in place is mounted in a metal frame which holds the board in position to be fluxed, preheated and finally soldered.

4. The soldered circuit boards are loaded in metal baskets and immersed in hot Freon vapor in an ultrasonic tank. This process removes dirt, excess flux and foreign matter from the board.

5. The boards are checked for completeness and any missing components are inserted and soldered in place using a hand soldering iron. Other touch-up operations occur.

6. Special components and hardware that because of location or size could not be installed and wave soldered initially are mounted and/or soldered in place by hand.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

G4

7. The boards are visually inspected.

8. The boards are packed and shipped to Puerto Rico where they have casings added and are tested.

Section 10.195, Customs Regulations, provides inter alia, that any article which is a new or different article of commerce which has been grown, produced or manufactured in a beneficiary country may qualify for duty-free entry under the CBI and that no article or material shall be considered to have been grown, produced or manufactured in a beneficiary country by virtue of having merely undergone simple combining or packaging operations. We are of the opinion that the processing that occurs in this operation is substantial; it is beyond a simple combining or packaging operation. We also believe that the operation creates a new and different article of commerce from the discrete components imported into Haiti.

Accordingly, printed circuit boards manufactured according to the described process are products of Haiti for purposes of the CBI and are entitled to duty-free treatment if they otherwise comply with the applicable CBI requirements.

One of the other requirements which is set forth in Section 10.195 is that the sum of the cost or value of the material produced in a beneficiary country, plus the direct costs of processing operations performed in a beneficiary country, must not be less than 35 percent of the appraised value of the article at the time it is entered. For purposes of satisfying the 35 percent requirement, an amount not to exceed 15 percent of the appraised value of the article at the time it is entered may be attributed to the cost or value of materials produced in the customs territory of the United States (other than Puerto Rico).

Concerning the appraisement of the imported circuit boards, it appears from the information you have provided that the merchandise will be appraised on the basis of transaction value, section 402(b) of the Tariff Act of 1930, as amended by the Trade Agreements Act of 1979 (TAA). Transaction value is defined as "... the price actually paid or payable for the merchandise when sold for exportation to the United States, plus amounts ..." for five specified items, one of which is the value of any assist. The term "assist" is defined as any of four specified categories of items or services "... if supplied directly or indirectly, and free of charge or at reduced cost, by the buyer of imported merchandise for use in connection with the production or the sale for export to the United States of the merchandise."

Thus, it appears that the transaction value of the imported circuit boards will be represented by the price paid to the unrelated subcontractor in Haiti, plus the value of the assists furnished to the Haitian subcontractor.

553874

GS

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

We note that you propose to include in entered value the salaries of supervisory personnel employed by the importer who work in the Haitian subcontractor's plant. We have held in this regard that the services of such personnel are not considered dutiable assists if the personnel are domiciled in the United States and are paid by the importer. (See TAA #46 (542696), copy enclosed). Under these circumstances, the salaries of such personnel also would not be included in the direct costs of processing operations, as those words are defined in section 10.197 of the Customs Regulations, for purposes of determining whether the 35 percent value requirement has been satisfied.

Sincerely,

For (Signed) J. T. Roth

Post Office Box 505
Morris Plains, New Jersey 07950

Dear Mr. Czubak:

Your letter of September 16, 1985, addressed to our New York office, has been referred to us for reply on the tariff treatment of certain disposable surgical gloves and the I.V. start pak exported to Mexico for packaging.

The gloves and the individual medical components in the pak have not been changed in any way or advanced in value while abroad except for packaging into plastic and paper containers. On this basis, the imported packaged domestic articles are entitled to free entry under item 800.00, Tariff Schedules of the United States (TSUS), and the usual containers or packaging materials are also free under General Headnote 6(b)(i), TSUS, upon compliance with the regulations. Since the contents are free of duty, the containers are not subject to duty.

Sincerely,

(Signed) RUSSELL ARNOLD

Michael A. Johnson, Esq.
Barnes, Richard & Colburn
Attorneys & Counsellors at Law
475 Park Avenue South
New York, New York 10016

Dear Mr. Johnson:

In your letter of October 9, 1985, on behalf of Schering-Plough Corporation, you asked about the applicability of item 806.20, Tariff Schedules of the United States (TSUS), to certain chemical drug compounds, such as Aurothioglucose, Desamethasone, and Gentamicin, among others, that would be exported to Belgium for sterilizing and returned to the United States.

It is stated that the client is a pharmaceutical manufacturer that produces a large number of drug products for both human and animal use. Most of the drugs are used to treat inflammations by parenteral (intravenous or intramuscular injection) or ophthalmic use. Before being prepared for such use, however, in dosage forms, the drugs must be rendered sterile in a pure state in order to be free from microbiological contamination and toxic components.

It is proposed to export the drugs in bulk form to sterilize them and to return them asceptically packaged for further asceptic dosage formulation for parenteral injection or ophthalmic use. The bulk active drugs are exported in powder form, dissolved in an appropriate solvent, and passed through a special filter into a sterile environment. The purpose is to filter out of solution all micro-organisms and other impurities present in the drugs when manufactured. In order to restore the drugs to a solid state for return, precipitation solvents are added to the solution containing the drugs, which have the effect of precipitating the drugs out of solution into a solid state. What remains in the vessel is a solution containing only the solvents and a slight amount of the drug that failed to precipitate out. This process is explained in terms of a physical change or mixture, rather than a chemical change since the drug was originally manufactured with a specific chemical structure. The solution in the vessel is further passed through another filter in order to separate out and recover the solid precipitate. The recovered drug is dried to a powder form and packaged in sterile containers for return to the United States where it will be prepared further in appropriate dosage forms for ultimate use.

Item 806.20, TSUS, provides for an import duty to be assessed upon the cost or value of repairs or alterations made on articles that are exported for that purpose. The application of this tariff provision,

G8

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

however, is precluded in circumstances where the operations performed abroad result in new or commercially different articles, or where the foreign operations constitute a part of the manufacture that had begun in the United States.

In this respect, the foreign process of sterilizing the exported drugs does not create a new and different article of commerce since the bulk drugs may be sold either before or after to other pharmaceutical firms for processing into dosage end-use forms. The drugs are exported in powder bulk and returned in bulk, with no change in chemical or physical structure. Both the exported and returned product may be sold in the same markets to the same class of buyers within the pharmaceutical industry. The drugs are regarded as finished products except for preparing them further for dosage use. Sterilization is a kind of cleaning step that removes all traces of contamination and cleaning has traditionally been regarded as an appropriate process for item 806.20 tariff treatment.

Accordingly, we believe that the merchandise may be entered under the alterations provision of item 806.20, TSUS, with duty on the cost of the foreign processing, upon compliance with the regulations.

Sincerely,

(Signed) RUSSELL ARNOLD

Mr. John M. Hudson
Customs Consultant
Rudolph Miles & Sons, Inc.
Customhouse Brokers
4950 Gateway East
Post Office Box 144
El Paso, Texas 79942

Dear Mr. Hudson:

Your letter of July 11, 1985, addressed to the District Director of Customs at El Paso, Texas, has been forwarded to this office for reply on the applicability of GSP to certain wood cabinets made in Mexico.

You state that your client exports raw dimension lumber and plywood sheets to a Mexican firm which produces the various components such as doors, drawers, drawer fronts, moldings, kick plates and other parts. You submitted commercial magazines and other documentary data to show that such components are saleable articles of commerce.

On the basis of your submission, we are of the opinion that the foreign wooden raw materials have been substantially transformed into new articles of commerce in the beneficiary country and, therefore, may be considered intermediate constituent materials. Accordingly, since such materials are again substantially transformed when assembled into the eligible imported article, their cost may be included in arriving at the 35 percent added-value determination.

Sincerely,

(Signed) RUSSELL ARNOLD

Peter Buck Feller, Esq.
Law Offices
Rose, Schmidt, Chapman, Duff & Hasley
1825 Eye Street N.W.
Washington, D.C. 20006-5486

553881

Dear Mr. Feller:

In your letter of September 5, 1985, on behalf of Consolidated Cigar Corporation, you asked about the applicability of item 806.20, Tariff Schedules of the United States (TSUS), to wrapper tobacco that will be exported to the Dominican Republic for sorting and stemming and returned to the United States.

It is explained that wrapper tobacco will be exported, some to be sold abroad and some to be stemmed and returned to the United States, all exported under a bill of lading in lieu of a Certificate of Registration C.F. 4455. The exporter of the tobacco (Windsor Shade Tobacco Company), however, will file a Certificate of Registration in connection with each exportation, indicating that a least a portion of the exported tobacco will be stemmed and returned to the United States.

Because the exporter and importer of the tobacco leaves and stems will be different parties, certain declarations by appropriate foreign officials will accompany the returned stemmed tobacco, attesting that the returned tobacco is the same as that which was exported and that it is the same tobacco covered by a Certificate of Registration. A copy of the bill of lading covering the exported shipments of the wrapper tobacco will also accompany the imported stemmed tobacco leaves and stems.

Item 806.20, TSUS, provides for a duty to be assessed on the value of repairs or alterations that are made on articles sent abroad for that purpose.

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC

G12

On the basis that the stemming of exported wrapper tobacco has already been adjudicated under the alterations provision of item 806.20, TSUS, and the necessary steps are being taken to assure that the imported stemmed wrapper leaves and stems can be readily identified as the same U.S.-grown wrapper tobacco that was exported, though imported in an altered condition, item 806.20, TSUS, will not be denied.

In the final analysis and in accordance with the rules and regulations, the question of whether claims for item 806.20 tariff allowances are justified by the facts rests ultimately with the area or district director of Customs.

Sincerely,
(Signed) RUSSELL ARNOLD

Mr. John P. Tebeau
Heron, Burchette, Ruckert
& Rothwell
1025 Thomas Jefferson Street, NW.
Suite 700
Washington, D.C. 20007

Dear Mr. Tebeau:

In your letter of November 5, 1985, on behalf of Nizetich and Company, you asked about the applicability of item 800.00, Tariff Schedules of the United States (TSUS), to raw frozen tuna fish that is proposed for exportation to Mexico for canning and return to the United States.

It is explained that raw frozen tuna would be caught and landed in the United States and released as a product of American fisheries and subsequently exported to Mexico via truck along with accompanying cans and lids, labels, and oil, all of American origin. In Mexico, the tuna would be butchered, cooked, and placed in cans with either the exported oil or water of foreign origin. The lids would be fastened and labels attached. The canned tuna would be sterilized in Mexico by a second cooking in oil or water, and the canned tuna would be returned to the United States.

With respect to the described tuna, item 800.00, TSUS, applies to products of the United States which are returned free of duty after having been exported without having been advanced in value or improved in condition by any process of manufacture or other means while abroad. The test specified in item 800.00 cases is whether the merchandise of American origin has itself been the object of an advance in value or improvement in condition while abroad.

Since raw frozen tuna was exported and processed in the manner described, and canned and sterilized abroad before return to the United States, the returned canned tuna is not the same product that was exported. Instead, the exported tuna has been subjected to an advance in value and condition, contrary to the tariff provision. In these circumstances, the canned tuna is not entitled to free entry as American goods returned under item 800.00, TSUS. In the absence of any other special exemption from duty that might apply, the returned canned tuna would be dutiable on total value and quantity under the appropriate tariff provisions.

[illegible] TO THE

A3

With respect to the exported cans and lids, however, containers or holders of United States origin may be returned free of duty under the provisions of General Headnote 6(b)(i), TSUS, as the usual type containers or holders ordinarily sold at retail with their contents. This would also include such packaging materials as labels and shipping cartons of United States origin.

Sincerely,

Russell Arnold

606812

MAY 2 1977

ENF 4-02.1 R:E:P
606812 JM

[redacted]

Dear [redacted]

This is in reference to your letter dated July 28, 1976, concerning the liability for unpaid duties and penalties which may be incurred by an importer when it is determined subsequent to importation that goods are not in fact eligible for duty free entry under the Generalized System of Preferences.

You posit a situation in which the entry has been liquidated, and later it is found that the Form A and the certification are false. Inasmuch as you appear to be seeking general information, we shall reply to your inquiry generally.

Section 514, Tariff Act of 1930, as amended (19 U.S.C. 1514) provides in pertinent part that, with certain exceptions, a liquidation shall be final and conclusive upon all persons, including the United States, unless a protest is filed within 90 days after liquidation. Section 521, Tariff Act of 1930, as amended (19 U.S.C. 1521) permits the appropriate Customs officer to reliquidate an entry within two years after the date of liquidation if he finds probable cause to believe there was fraud in the case.

Absent a finding of fraud, the liquidation of the entry would be final and conclusive, and we would have no legal basis for assessing or collecting duties.

However, in cases such as this, the Government will accept a voluntary tender of an amount equivalent to the duties which would have been payable had the error been discovered at a time which would have permitted the assessment and collection of duties.

In regard to the liability for penalties, as a general rule a claim for forfeiture value under title 19, United States Code, section 1592, may be assessed

AS

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

[redacted]

if the District Director of Customs determines that the importer did not have reasonable cause to believe the truth of the statements or documents submitted to Customs. Of course, if the District Director determines that the importer had reasonable cause to believe the truth of the statements and documents presented to Customs to effect entry, a claim for forfeiture value will not be assessed where circumstances otherwise amounting to a violation are revealed in a voluntary disclosure. If the District Director finds the loss of revenue to be the result of an inadvertent error or other circumstances such as technical or petty or isolated violation not amounting to negligence, however, a claim for forfeiture value will not ordinarily be issued.

If an importer believes he may have incurred a claim for forfeiture value under title 19, United States Code, section 1592, he may take advantage of the voluntary disclosure procedure outlined in section 171.1 of the Customs Regulations (19 CFR 171.1) and therefore limit the maximum contingent liability to one time the revenue loss. In the event the importer chooses to make a voluntary disclosure, a claim for forfeiture value will be assessed under section 1592 if the District Director of Customs determines that the importer did not have reasonable cause to believe the truth of the statements and documents presented to Customs to effect entry.

We trust the above provides the guidance you requested.

Sincerely yours,

(S) Kathryn C. Peterson

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

MAR 15 1982

ENF-4-02.2 CO:R:E:C
652304 BMS

Dear Madam:

Your memorandum dated July 29, 1980, forwarded an undated petition, submitted by [redacted] on behalf of [redacted] (Petitioners) seeking relief from a joint and several claim for forfeiture value of $849,500, assessed for violation of title 19, United States Code, section 1592, in Minneapolis District Penalty Case No. 79-3501-50030.

The liability was incurred because during the period October 1974 through January 1976, petitioners caused certain printed labels (claimed to be "postage" stamps originating from the island of Staffa, Scotland) to be entered into the commerce of the United States by means of material false statements in entry documents, or otherwise through their failure to file Customs entries. The alleged falsities and omissions, and the loss of revenue attributable thereto are listed below.

Description	Loss of Revenue
1. Fifteen undeclared importations made by mail from October 15, 1974 through January 9, 1976.	$ 74,375.40 (Actual)
2. Six entries made between June 2, 1975, and November 13, 1975, in which the merchandise was falsely described as postage stamps ($37,137.40 loss of revenue) or was undervalued in that assists were not declared ($2,035.40 loss of revenue)	$ 18,072.80 (Actual) and $ 21,140.00 (Potential)
	$113,548.60 Total

The creation of the so-called Staffa stamps herein involved appears to have been a joint endeavor of petitioner [redacted] and petitioner [redacted]. The information currently in our possession indicates that the Isle of Staffa is uninhabited and has been so since about 1[illegible]. Staffa is currently owned by [redacted].

[redacted] purchased the Isle of Staffa in November 1972 from the [redacted]. Along with the title to the Isle, acquired an "assignment" or contract which ran with the land. That contract gave [redacted] President, [redacted] and [redacted], British companies [redacted] all rights in connection

652304

A7

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

with the design, production, printing, and distribution of "local carriage labels or stamps" of the Isle of Staffa. In exchange, the owner of the land receives a small remuneration (several hundred British pounds per year).

On July 1, 1974, [redacted] entered into a contractual agreement whereby [redacted] granted [redacted] the exclusive right to market all proposed limited edition "gold stamps" printed by [redacted] on behalf of the "philatelically recognized" foreign territories of Oman, Nogaland, Dhufar, Iso, Staffa, and Eynhallow. In that agreement, [redacted] affirmed that it had the exclusive right to produce such "stamps" from each of the foreign territories cited.

Petitioners' numerous arguments will generally be treated herein in the order in which they appear in the petition. Accordingly, we deal first with the petitioners' assumption that the current proceeding is one in forfeiture, and the conclusion that the current petition is one which should have been properly instituted under 19 U.S.C. 1592, as amended by Pub. L. 95-410 (the "new law"). In this regard, we note that the statute under which the current action is brought, 19 U.S.C. 1592 as it existed prior to the passage of Pub. L. 95-410 (the "old law") permits the Customs Service to forfeit the merchandise involved, or to assess a penalty equal to the value of the imported goods. In the instant matter, the Customs Service elected not to forfeit the merchandise, but instead assessed a penalty equal to its value. Accordingly, we are of the opinion that the instant action is not one which is properly designated as a proceeding in forfeiture. Rather, it is an in personem action. See United States v. Willetts, et al., 28 F. Cas. 612 (S.D.N.Y. 1871) (No. 16,694); United States v. Baker, 28 F. Cas. 613 (S.D.N.Y. 1871) (No. 14,500); United States v. York Street Flax Spinning Co., 28 F. Cas. 800 (S.D.N.Y. 1879) (No. 16,781).

With regard to petitioners' conclusion that the current penalty action should have been brought under the new law, we note first that section (f)(1)(A) of the new law indicates that, "subsections (a), (b), and (c) [of the new law] . . . shall be effective with respect to proceedings commenced after the 60th day after the enactment of this Act." The proceedings embraced by subsection (b) of the new law include the issuance of a prepenalty notice. More importantly, the legislative history of the new law specifically indicates that proceedings are commenced upon the issuance of a prepenalty notice. S. Rep. No. 95-778, 95th Cong., 2d. Sess. 20, reprinted in [1978] U.S. Code Cong. & Ad. News 2211, 2231. The prepenalty notices in the current case were issued on December 22, 1978. Accordingly, because the prepenalty notices were issued prior to the 60th day after the enactment of the new law, we are of the opinion that the current action is one which was properly commenced under the old law. In this regard, see also United States v. Digital Equipment Corp., Slip Op. 82-11 (January 29, 1982), in which the Court of International Trade ruled that the date of the involved entries is controlling in determining whether a claim is properly assessed under the old law or the new law. We note that under this standard the current action was also properly commenced under the old law.

052304

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

A8

Petitioners' second argument is that in connection with a prior action brought by the United States Postal Service an administrative law judge found that the merchandise herein involved was properly describable as a postage stamp[s]. P.S. Docket 5/24, December 21, 1976. First, as will be discussed in a later section of this decision, it is our opinion that the referenced Postal Service ruling was obtained by means of false representations. Secondly, although we do not question that such a finding may have been made by a United States Postal Service administrative law judge, we do note that the referenced Postal Service action was concluded by means of a consent agreement dated February 9, 1977, in which [redacted] agreed to cease and desist from representing that, "the Staffa stamps are 'postage stamps' or 'postal issues' unless a clear and conspicious affirmative disclosure is made . . . that they are British private local issues with a limited franking or postal function the nature and extent of which is fully described." Accordingly, the only reference to the nature of the imported merchandise in the document which concluded the Postal Service's action, refers to the goods as British private local issues. Finally, and most important, the consent agreement entered into in connection with the conclusion of the Postal Service's action indicates that, "neither this Agreement nor the Initial Decision incorporated herein shall operate as a bar, res judicata or as a collateral estoppel in any other proceeding nor shall they be determinative on any question of fact or issue of law in any such proceeding." We have been orally informed by our Office of Investigations that the above language was inserted in the consent agreement for the specific purpose of barring claims and arguments such as that which the petitioners are currently postulating. Accordingly, no weight at all is to be given to the fact that a Postal Service administrative law judge at one time may have opined that the merchandise herein involved consisted of postage stamps.

Third, petitioners state that: 1. personnel within the Customs Service were unable to agree on the proper classification of the goods during the pendency of an internal advice request regarding its classification, 2. that subsequently, the classification issue was tried in both the Customs Court and Court of Customs and Patent Appeals, and 3. that at the trial in the Customs Court petitioners presented numerous experts who testified that the merchandise was postage stamps. It is argued that the above circumstances demonstrate that petitioners had reasonable cause to believe that the merchandise herein involved constituted postage stamps.

In response to the above arguments, it must first be noted that it has been, and continues to remain our position, that legitimate disputes concerning the classification or appraisement of merchandise should not normally be the subject of penalties assessed pursuant to section 1592 (emphasis added). However, in the instant case, as will be demonstrated below, petitioners themselves did not actually believe that the merchandise involved constituted a type of postage stamp. Rather, once the Customs Service questioned petitioners' description of the merchandise, they attempted to legitimate the reasonableness of their purported position by availing themselves of all available administrative and judicial proceedings designed to contest Customs position, and 2. by making false representations concerning the nature of the stamps at those proceedings. Accordingly, the use of the internal advice and judicial proceedings by petitioners constituted self-serving attempts to convince the Customs Service that petitioners reasonably believed the goods herein involved were postage stamps.

652 304

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Likewise, petitioners erroneously cite the opinion of the Duty Assessment Branch of the New York Seaport, issued in connection with the internal advice request as indicative of an internal disagreement among Customs Service personnel concerning the classification of the merchandise as postage stamps. In this regard, while New York considered the merchandise to be flat shapes or forms (item 790.55 TSUS), and Customs Headquarters felt the goods were classifiable as articles of gold (item 666.10 TSUS), there was never any disagreement among Customs personnel that the merchandise was not postage stamps.

Finally, it is currently our impression that the experts who testified on petitioners' behalf at the trial in the Customs Court were all stamp dealers (as opposed to collectors), each of whom would have a pecuniary interest in maintaining that the merchandise involved consisted of postage stamps. Additionally, we would note that petitioners specifically point to the expert credentials of one of its witnesses, [redacted], including the large volume of publications authored and edited by him. In this regard, assuming [redacted] is an expert, his credibility at the trial is at best suspect, as evidenced by several articles appearing in publications he has edited or authored. See David Beech, "British Off-shore Island Postal Services," The Cinderella Philatelist, XV (April and July, 1975), 31, 67; L. W. and K. Williams, Cinderella Stamps 98-100 (1972).

The most serious of petitioners' arguments is that at the time the merchandise involved was introduced into the commerce of the United States, the petitioners did not know that it could not properly be described as postage stamps, and in fact, had reasonable cause to believe that it could be so described. In support of this argument, petitioners contest a statement contained in the penalty notice issued in this case which indicates that, "investigation has shown that the Staffa labels were neither issued nor recognized by a government and that they are not, and never were intended to be used as postage." Although petitioners apparently misconstrue the above statement as constituting the basis of the alleged violations of section 1592, it should be emphasized that the only violations herein charged are: 1. petitioners' description of the merchandise as postage stamps without reasonable cause to so believe, 2. petitioners' failure to declare an element of value attributable to design costs, and 3. petitioners' failure (a material omission) to make entry for 16 shipments of the involved stamps. The facts that: 1. attempts were made to mislead the Customs Service concerning the intended use of the merchandise, both prior and subsequent to its introduction, 2. the stamps were neither issued nor recognized by a government, and 3. that they are not, and never were intended for use as postage, are evidentiary matters supporting the conclusion that a violation of section 1592 occurred.

Taking the alleged violations of section 1592 in reverse order, petitioners argue that some of the stamps (16 importations) were introduced into the commerce of the United States without benefit of a formal entry, while six importations were the subject of formal entry because, "the importer believed he was exalting form over substance in making a formal entry of duty-free merchandise." In this regard, the record herein indicates that between approximately October 1974 and June 1975, petitioners made nine mail importations without benefit of a Customs entry; that subsequently, between June 1975 and August 15, 1975, three formal entries of Staffa stamps were filed; that thereafter, on or about August 26, 1975,

652 304

A10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

another importation of stamps was made without benefit of an entry; that on September 24, 1975, an additional formal entry of stamps was filed; that on or about October 10, 1975, two importations of stamps were made without benefit of formal entry; that between October 24, 1975, and November 19, 1975, two formal entries of stamps were made; and that between approximately January 1, 1976, and January 9, 1976, three additional importations of stamps were made without benefit of any Customs entry. The above circumstances clearly demonstrate that petitioners were aware that formal entries for the merchandise should have been filed. Petitioners' claimed belief that the merchandise could be entered duty-free is of no relevance, and is not an excuse for, their failure to file Customs entries for the goods. Accordingly, petitioners' failure to file entries for 15 importations of stamps constitutes gross negligence in that petitioners acted with either actual knowledge of or wanton disregard for the relevant facts and with indifference or disregard for their obligations under section 1592.

The second alleged violation herein involved was the petitioners' failure to declare assists. No evidence appears in the file forwarded to us which substantiates this claim. In fact, information supplied by petitioners in two Special Customs Invoices (nos. 103210 and 104517) compels the conclusion that assists were declared. Accordingly, the claim for forfeiture value is hereby cancelled insofar as it relates to petitioners' failure to declare assists. Consequently, the total loss of revenue is reduced to $111,513.20 ($90,363.20 actual loss and $21,150 potential loss), and the domestic value of the goods is reduced to $637,285.

Proceeding to the remaining allegation, certain correspondence among petitioners prior to the creation of the goods indicates they actually believed the merchandise to be other than postage stamps. First, a letter from petitioner [redacted] to petitioner [redacted] dated July 29, 1974, comments on certain proposed literature advertising the stamps as follows:

> Similarly, instead of "rear [sic] postage stamp for collectors and investors" I would put in 'rear [sic] opportunity for discerning collectors and investors, stamps minted from 18/22kt. gold'. Where you have "by grant of the Postal Authority of Great Britain" I would leave it out completely as I think the implication is too strong.

In his response to [redacted] dated August 2, 1974, [redacted] asked, "Can't we call these postage stamps, or is there some reason why we must eliminate the word 'postage'?" [redacted] responded to [redacted] question in a letter dated August 17, 1974, in which it was stated:

> There is no objection to using the word "rare" as far as I know because rarity is probably a matter of opinion. I have eliminated the word "postage" because we then come on to the distinction between "local" [sic] and other post.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

652304

A11

In a latter portion of the same letter [redacted] also states:

> You will find that the stamps are on a base that can be removed leaving a gummed stamp. In other words you peel off the backing paper and you then have a fully gummed stamp, in fact no one will peel off the backing paper.

In addition, the original and amended versions of the contract entered into between [redacted] dated July 1, 1974, provide evidence of the parties' beliefs. For example, neither the phrase "postage stamp" nor the word "postage" appears anywhere in either the original or amended version of the contract. Rather, the merchandise in issue is referred to as "10kt. gold Limited Edition stamps", "stamps", and "gold stamps". Secondly, paragraph 9 of the contract is totally inconsistent with the notion that the merchandise could be called a postage stamp.

> 9. London Stamp understands that the primary intent is to market these stamps as a Limited Edition and agrees not to produce more stamps than actually ordered by [redacted] . . . .

The above cited evidence does not indicate that petitioners misdescribed the merchandise which is the subject of the instant case intentionally, or otherwise for the purpose of defrauding the revenue. Nevertheless, it does indicate that petitioners actually believed the Staffa stamps to be other than postage stamps. Accordingly, petitioners' misdescription constitutes an act of gross negligence in that they acted with actual knowledge of and wanton disregard for the relevant facts and with indifference or disregard for their obligations.

Subsequent to the previously cited correspondence, once the investigation of the stamps had began, petitioners intentionally misrepresented their true nature in an attempt to influence their classification by the Customs Service. These misrepresentations are additional evidence supporting the conclusion that petitioners did not actually believe the goods to be postage stamps. For example, in a letter dated January 16, 1976, after some shipments of gold stamps had been reliquidated by the District Director of Customs, Minneapolis, the petitioners protested, and requested internal advice from Customs Headquarters. The above letter claims, among other things:

> 1. The goods here in question constitute actual and official postage stamps of the Isle of Staffa and can lawfully and properly be used to prepay postage by affixing the stamps to an article to be mailed.
>
> 2. . . . .The subject stamp has been designed for use and actually used on envelopes.
>
> 3. A crucial fact, we think, is that it would be impossible to mail anything from the Isle of Staffa to the British mainland, unless a Staffa, Scotland, postage stamp were affixed to the item to be mailed.
>
> 4. The item could not be transferred by post from the Isle of Staffa to the British mainland if only postage stamps issued by the British government were affixed--nothing less than a stamp authorized and issued by the Isle of Staffa will suffice for this purpose.

652304

A12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

5. . . . .The merchandise constitutes postage stamps that were in fact issued as postage stamps by a governmental body that has the authority to issue postage stamps.

6. The stamps involved can be used at any time and are recognized by the Isle of Staffa to have the full carriage value of their face amount of six (6) pounds.

7. The owner of such a stamp is absolutely entitled to use it to prepay postage on items mailed on the Isle of Staffa.

Additionally, included with the internal advice letter of January 14, 1976, was an envelope claimed to be a "first day cover" mailed from Staffa. The "first day cover" contains a gold Staffa stamp and a Staffa, Scotland postmark dated November 1, 1974. In this regard, it should be noted that [redacted] previously testified in the Customs Court that no tourists can visit Staffa from October until April, and that during that period the weather conditions make it almost impossible to land on Staffa. Likewise, the information in our possession indicates that there is no boat service to Staffa during the October-April period. The above facts support the conclusion that the so-called first day cover was not and could not have been mailed from Staffa.

On January 24, 1976, [redacted] stated during the course of the investigation accompanying the current case that the Staffa gold "stamps" were legitimate postage in that Staffa "stamps" are required to be affixed to mail leaving the Isle of Staffa. [redacted] further stated that 20,000 sets (12 stamps each) would be printed by [redacted] per agreement; that customer orders for all 20,000 sets had already been received by [redacted], and; that after the printing of the 20,000 sets, the dies would either be returned to [redacted] or proof of their destruction would be provided. When it was pointed out to [redacted] that his assertions were diametrically opposed; i.e. that no "stamps" would be left for circulation or sale on, or by, the Isle of Staffa, [redacted] reversed himself and said that obviously a few extra stamps would have to be produced for domestic (Staffa) consumption.

During the pendency of the internal advice request initiated by the petitioners, a meeting was held at Customs Headquarters on June 2, 1976. The arguments presented by the petitioners were reduced to writing by their attorney. Selected quotations from the written arguments are cited below:

1. Tourists regularly mail cards and letters from the Isle and do so by affixing the Staffa stamp to the envelope or card, in the traditional manner. Stamps are sold from the ferry as with any other mailing system. The fee charged varies with the weight of the missive as it does in any post office. Staffa stamps range in values from one pence to six pounds sterling... In consideration for such payment, the card or letter is transported from Staffa to the mainland and a Crown stamp is affixed for worldwide transportation. From the point of mailing at Staffa to its coming to rest on the mainland, the letter is handled as is any other letter posted throughout the world.

652304

A13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

2. The present program of issuing Staffa stamps is carried on with the full advice and consent of the owner of the Isle. Apparently the Customs Service has developed information that the Staffa stamps were issued without the knowledge of its owner. Such a fact, if true, discredits the propriety of the offering since it would discount the use of the stamp in the transmission of letters from Staffa to the mainland.... [redacted] was completely aware of the Staffa stamp project and encouraged it.

3. The affixing of a Staffa stamp on an envelope will cause a letter or other missive to be transported from the Isle of Staffa to the mainland.

Additionally, during the course of the previously mentioned Postal Service inquiry, on September 3, 1976, petitioners, either individually or through their attorneys, made the following claims:

1. Staffa has an official postal agency.

2. The owner of Staffa provides a postal service from Staffa to the British mainland.

3. [redacted] produces the stamps for [redacted] plus the the number that are needed on the island to be supplied to the Staffa Postal Service.

4. The means by which the denominations of Staffa stamps are determined relates to the tariffs charged by the Staffa Postal Service.

5. Between 100 and 200 gold stamps have been sold on Staffa.

Furthermore, Respondent's Exhibit II introduced at the Postal Service inquiry purported to be a postcard which had been mailed on Staffa by use of a Staffa stamp, postmarked on Staffa, and transported to the Island of Mull where a British stamp was affixed thereto and separately cancelled.

As a result of the above claims, Customs initiated a foreign investigation, the results of which are summarized below. The information currently in our possession reveals that [redacted] and his wife operate a ferryboat which, during good weather in the summer, carries tourists from the Isle of Mull around Staffa and back; that landings on Staffa are rarely attempted because of the rough waters; and that when they are attempted, it is by means of small rubber rafts launched from the ferry. The ferry service employs one boat handler on a seasonal basis.

[redacted] sells souvenirs on board the ferry. Included among the souvenirs are sets of 6 Staffa labels which are printed to indicate that they are postage of Staffa. The labels have a face value of 1 pence to 20 pence. The British postal authorities have advised [redacted] that the stamps were "Cinderella Issues", and that as long as they did not interfere with British postage stamps affixed to mail they might also be affixed thereto.

6523044

A14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

With regard to the gold stamps in particular, [redacted] first became aware of their existence from an article in the November 1974 issue of Business Week magazine. Prompted by the article, [redacted] wrote [redacted] letter on December 11, 1974, two months after the first shipment of gold stamps arrived in the United States, and six months after [redacted] began development of the project.

Even though [redacted] first learned of the gold stamps in December 1974, he did not actually see one until late 1975, or early 1976. At that time, [redacted] sent him ten gold "stamps", asking that the "stamps", along with British stamps, be affixed to post cards and cancelled in such a way that it would all appear to be in the right order. [redacted] cancelled the ten Staffa "stamps" with his Staffa cancellation in Chichester, Sussex, England. He then took the cancelled post cards to the British Post Office on the Isle of Wull, affixed British postage stamps and asked the postmaster to cancel the cards carefully so that he got a nice clean cancel mark. [redacted] then placed the ten post cards in an envelope and mailed them to [redacted] It was one of these postcards which petitioners introduced into evidence at the Postal Service hearing in September 1976, claiming it to have actually been posted in Staffa. In this latter regard, the postcard used by petitioners at the Postal Service hearing bears a cancellation date of "26 March 1976", proof that [redacted] did not have any gold stamps prior to late 1975 or early 1976.

After returning the ten gold "stamps" to [redacted] was again without gold "stamps" until July 1976. At that time he received an inquiry from a person in the United States seeking to purchase a gold "stamp". [redacted] asked [redacted] how he was to service the request, and [redacted] sent him a small quantity of gold "stamps" for such occasions. [redacted] sent one gold "stamp" to the person in the United States, cashing the $15.00 check, and kept the rest of the gold "stamps". Customs information indicates that the above transaction represents the only sale of a gold "stamp" by Staffa personnel as of November 1976.

On or about July 1976, (subsequent to the initiation of the Customs investigation herein) [redacted] approached [redacted] about the erection of a mail box on Staffa, the cost of which was to be absorbed by [redacted] [redacted] indicated to [redacted] that the presence of a mail box had then become important.

The information in our possession indicates 1) that only a very few cards have ever been found in the mail box; 2) that those which have been found were probably put there by traveling yachtsmen; and 3) that they all bore British postage stamps and no Staffa stamps. The above information was confirmed by [redacted], who has indicated that if British postage stamps were not affixed to letters placed in the box, such material would not be accepted because otherwise the [redacted] would be forced to absorb the cost of forwarding such mail.

652304

B1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

In addition to the above information, Customs investigation indicates that no parcels have ever been mailed from Staffa and that [redacted] does not operate the so-called Staffa Island Postal Service.

In addition to our finding of gross negligence concerning the alleged violations, we regard the petitioners' false representations during the internal advice, Postal Service, and judicial proceedings as an aggravating factor. Based on these findings, the claim for forfeiture value is hereby mitigated to $557,000, provided that the adjusted actual loss of revenue of $96,303.20 is also deposited as withheld duties.

Please notify petitioners immediately, through counsel, of this decision, together with the advice that payment or a promissory note executed in accordance with section 5362 of the Customs Service Policies & Procedures Manual must be submitted by the close of business March 25, 1982, or the case will be referred to the Justice Department for the institution of judicial proceedings. A cash payment by any of the involved parties may be considered as compliance with this decision.

Immediate steps should be taken to refer this matter to the Justice Department in the event that compliance is not forthcoming. Please note that the statute of limitations will currently become available as a defense to petitioners on April 3, 1982. A copy of this letter may accompany your written notification to the petitioners of our decision.

Sincerely,

/S/ by

John P. Simpson
Director, Office of
Regulations and Rulings

[redacted]

Dear [redacted]

As requested in your letter dated September 23, 1981, please find enclosed our telegraphic opinion in the [redacted] case. In order to clarify the decision and differentiate the circumstances of the [redacted] case from those of the [redacted] case currently pending at Customs Headquarters, we note that the [redacted] decision was based on the following facts: 1. the merchandise there involved was not described as "postage" stamps, 2. our internal advice ruling 36/76 implies that the merchandise involved might reasonably be described, as was done in [redacted] as gold stamps, seals, or stamps for collectors, 3. an omission of an adequate description was charged in [redacted] rather than an affirmative false statement as is claimed in the [redacted] case, and 4. under the circumstances in the [redacted] case, where it was known by the Customs Service that an alleged classification dispute existed, the descriptions furnished us did not constitute material omissions.

Sincerely,

Edward T. Rosse
Chief, Commercial Fraud
and Negligence Penalties Branch

653349

ENF 4-02.2 CO:R:E:C
653349 MKT

Area Director of Customs
JFK Airport Area
Jamaica, New York 11430

Dear Sir:

Your memorandum of May 26, 1983, forwarded for our decision a petition submitted by [redacted] on behalf of [redacted]. The petition seeks relief from a claim for a monetary penalty in the amount of $58,520 assessed against [redacted] for a violation of title 19, United States Code, section 1592 (19 U.S.C. 1592), in JFK Airport Area Case No. 80-4701-00109.

The claim arose on September 28, 1979, when [redacted] presented a Declaration For Free Entry Of Articles Not Accompanying A Resident Or Non-Resident (CF 3299) falsely declaring 122 carpets to be personal and household effects. On October 5, 1979, [redacted] presented a false Bill of Sale, dated August 19, 1978, for 108 carpets stating a purchase price of $48,600. The declaration was false in that the carpets were not personal and household effects used abroad for one year or more by petitioner or members of his family who accompanied him to the United States. The Bill of Sale was false in that it (1) purported to be from a seller in Iran, (2) was dated over one year old, and (3) undervalued the carpets, when in fact it was prepared by [redacted] at or about the time of the importation.

Counsel makes the following claims.

The violation is a technical one resulting from petitioner's ignorance of Customs laws, misjudgement, and concern over the serious illness of family members. Petitioner's family, his father, mother, and two sisters, left Iran to live in France. Petitioner, who has been a practicing physician in the U.S. since 1960, urged his family to come to the United States so that his mother and sister who were terminally ill could receive better medical care. The family shipped the 122 carpets to petitioner in anticipation of this relocation.

Counsel states that all the rugs were used in the three residences of the family and range from one to five or more years in age. Most were purchased during the summer of 1978. The fictitious invoice covers carpets allegedly purchased during the summer of 1978, a little over a year before the importation at hand. Others are four or more years old.

B4

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

653349

Petitioner communicated with his father about the carpets after which petitioner prepared the Bill of Sale. Because the carpets are of second quality and because of recent price increases, petitioner's valuation is an accurate reflection of the value of the carpets.

Carpets of this type (mostly prayer rugs) and in this quantity are reasonable household effects of several residences in Iran. No intention to sell these carpets exists. Had the family intended to sell them, the family would have done so in France to profit from high French market prices.

The declaration on the CF 3299 certified by petitioner clearly states the requirements for free entry of personal and household effects. The Customs officer specifically requested a proforma invoice to substantiate the petitioner's claims.

The record does not demonstrate that these carpets were personal or household effects entitled to free entry. To be so entitled, the carpets must have been used in a household of which petitioner or one of the family members who accompanied him to the United States was a family member. Counsel states only that the carpets were used in three households of petitioner's family members and that some of these family members intended to move to the United States. The record does not reveal that any of the family members accompanied petitioner to the United States. Inasmuch as petitioner claims to be a resident of the United States, without other evidence we will not consider him to be a resident of these households.

The record contains petitioner's admission that he prepared the fictitious invoice. Counsel merely alleges that the values on the invoices are true because they were obtained from petitioner's father. But this alleged communication does not substantiate the value of the carpets. Nor does it negate the fact that petitioner backdated the invoice one year and one month and typed it on the letterhead of a concern with an address in Iran. Nothing in the record indicates that petitioner had a reasonable basis for the values, the date of purchase, or the seller, declared on the invoice. Each of these falsities is material to the appraisement of the carpets and in violation of 19 U.S.C. 1592.

The CF 3299 reflects that petitioner certified the statements contained on the form. As a consequence, we consider him to have actual knowledge of his obligation to provide true and accurate information to Customs on the CF 3299 and on the invoice he presented in response to the request of the Customs officer.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B5

Based on the evidence in the record and the discussion above, we find that petitioner falsely declared 122 carpets to be personal and household effects in violation of 19 U.S.C. 1592 and that the violation resulted from gross negligence. Inexperience is a factor warranting mitigation only when it contributes to the violation and the violation is not due to fraud or gross negligence. In this case, petitioner's inexperience in importing did not contribute to the violation. By the terms stated on the CF 3299, he knew what the requirements were to enter articles duty free as personal and household effects. He certified the document falsely and later presented a fabricated invoice.

Nevertheless, the unusual and unique circumstances in Iran during the time period of the violation are well-known. Taking these circumstances into account, we find substantial mitigation is warranted.

The claim for a monetary penalty in the amount of $58,520 is remitted upon payment of $7,315 and on the condition that petitioner pays the loss of revenue. Please notify counsel for petitioner that unless compliance is made with this decision the matter will be referred to the Department of Justice for appropriate action. Preliminary steps should be taken by your office to prepare the matter for referral in the event of noncompliance. A copy of this letter should accompany your notification.

Sincerely,

/s/ Donald W. Lewis

655319

15 JAN 1985

HIF 4-02.2 CO:R:E:C
653743 LE

653743

District Director of Customs
Houston, Texas 77052

Dear Sir:

This is in reference to the petition submitted on behalf of [redacted] requesting relief from a claim for $76,510 and the seizure of 38 rugs (Houston District Case No. 84-5309-00193).

The penalty was assessed and the merchandise seized because petitioner allegedly, as a result of fraud, made a material false statement upon his attempted entry of 38 rugs in violation of title 19, United States Code, section 1592. Specifically, petitioner attempted to enter the rugs free of duty under item 810.10, Tariff Schedules of the United States (TSUS) by declaring that the rugs are household effects used abroad for at least one year by him or his family and that such rugs are not intended for any other person or for sale. According to the penalty notice, the imported rugs are intended for resale in the United States.

As a result of the alleged violation, there is a reported potential loss of revenue of $4,650.

Petitioner requests relief from the penalty and return of the rugs based on his claim that his declarations regarding the rugs were accurate; i.e., that they were his personal effects for over a year and that they were not intended for resale. Petitioner argues that the subject carpets are part of his personal collection and that they are not now nor ever were intended for sale. Although petitioner admits that as a collector of carpets he may at some time trade or sell one or two, he claims that he is not in the business of selling them. He claims instead to be a commercial real estate developer by profession.

In support of the claim that the subject rugs are part of his personal collection, petitioner has submitted a signed statement of a personal friend, [redacted] attesting to this fact. [redacted] indicates that he knows that petitioner is a carpet collector and that he has seen petitioner's collection both in Iran and in a bonded warehouse in Geneva, Switzerland awaiting transportation to the United States. [redacted] states that he and petitioner left Iran under similar circumstances and that they both had certain personal items taken out of Iran through the same sources. He claims to have seen petitioner's carpets in the Swiss warehouse when he was arranging the shipment of his own belongings to the United States.

B7

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

As further evidence of his claim, petitioner has submitted a 1977 receipt for the purchase of 14 rugs from a New York carpet dealer, two warehouse receipts for the storage of rugs (an unknown number) in a foreign trade zone in Switzerland for a 28 month period ending on May 31, 1983, and a $300,000 insurance policy for rugs stored in Switzerland. Standing alone, these documents have little value since they do not identify the imported rugs in any manner. However, they do serve to substantiate [redacted] statement regarding storage of the subject rugs in a Swiss warehouse.

Based on [redacted] statement along with the above evidence, we conclude that the imported rugs were a part of petitioner's personal collection in Iran.

Nonetheless, there is evidence that petitioner intended to sell the subject carpets. First, both petitioner and his son told Customs inspectors that the carpets in question were to be exhibited in shows. We find it difficult to believe that the purpose of such exhibition was not to promote the sale of the carpets. In fact petitioner admits that he would sell the carpets to an interested buyer. Second, although investigation confirmed that petitioner is in the real estate business, it appears that petitioner's son may be in the carpet business (the subject shipment was in his name, he had in his possession numerous business cards from various rug dealers, and he admitted to Customs inspectors that he worked for his father buying and selling carpets). Third, when a Customs agent placed a telephone call to petitioner's office indicating that he was interested in buying carpets, the agent was advised that petitioner sells good carpets (petitioner was out of the office at the time). Finally, we find it difficult to believe that petitioner intended to use the rugs in his home since investigation revealed that petitioner lives in a two-bedroom apartment and that the floors and walls of every room are already covered with carpets.

Based on the above, we conclude that petitioner intended to sell the subject carpets and that his declaration to the contrary was false. We further find that this was a material false statement since it had the potential to effect the duty status of the rugs. There is, however, insufficient evidence upon which to base a finding of fraud. Since petitioner is a collector of carpets, he may have been under the mistaken impression that he could import them duty free despite his intention to exhibit and sell the carpets. Accordingly, we find petitioner was negligent in failing to use due care in ascertaining his obligations under the statute and in reporting the true facts.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B8

653742

In view of the circumstances in this case warranting mitigation beyond normal limits, the penalty is mitigated to $1,000, an amount believed sufficient to deter future violations. The seizure is remitted upon the filing of a formal entry and the payment of duties and the mitigated penalty.

Please notify petitioner of this decision, enclosing a copy of this letter therewith.

Sincerely,

(Signed) Edward T. Rosse

[redacted]

Dear [redacted]

This is in response to your letter dated February 15, 1985, in which you have submitted an offer in compromise, pursuant to title 19, United States Code, section 1617, on behalf of your client, the [redacted] involving Customs entries of watchbands and parts which are the subject of Boston District Penalty Case No. 84-00601-50014.

In the referenced case, Customs has alleged that [redacted] fraudulently entered the subject merchandise into the commerce of the United States without fully or accurately reporting the true transactions and falsely claiming the country of origin to be Hong Kong, when, in fact, the merchandise was produced in the Philippines. You indicate that your client has deposited a check in the amount of $100,000 with the District Director of Customs (Boston), representing civil penalties and the full and complete settlement of all claims and potential claims of the Government with respect to the entries involved in the subject case in which the articles were incorrectly marked as, or otherwise incorrectly declared to be, products of Hong Kong rather than products of the Philippines.

After careful consideration of the file in this matter, and the terms of the proposed settlement, we hereby accept the subject offer. The terms of the settlement as described in your February 15, 1985, letter are incorporated herein by reference.

[redacted]

Sincerely,

B/ Donald W. Lewis

[redacted]

Dear [redacted]

The District Director of Customs, Seattle, Washington, has forwarded us your letters of July 18, 19, and 29, 1974, concerning the country of origin marking of various kinds of fishing tackle imported by you, including swivels, lures, vinyl skirts and squids, rods and flies.

Your letters show that you are familiar with the requirements of section 304, Tariff Act of 1930, as amended (19 U.S.C. 1304), and the Customs Regulations issued thereunder.

We understand that your marking problems involve mainly swivels, vinyl skirts, and flies. The Customs Service issued a ruling in 1958 (C.I.E. 1257/58) excepting certain of the smaller sizes of swivels from individual marking. A copy of this ruling, with deletions is enclosed.

Larger swivels may be excepted from individual marking under 19 U.S.C. 1304(a)(3)(D) if they are imported in retail size packages that are properly marked to indicate the country of origin, or are repacked by you under the terms described in section 134.34 of the Customs Regulations. This exception does not apply, however, to swivels imported in bags containing 25 gross, which you in turn resell to other distributors after importation who will do the actual repacking.

Vinyl skirts and fishing flies are subject to individual marking unless they are imported in marked retail containers, or are repacked in retail containers by you, as in the case of the swivels. We understand that Customs in Seattle is willing to consider a package of 3 or 4 vinyl skirts, and a container of as many as 1 dozen flies of the same pattern, to be a retail container, and this sounds reasonable to us.

PRESIDENT FILE

[redacted]

We presume that vinyl squids are a kind of fishing lure. We are not aware of any problems involving the marking of lures and rods. These items are large enough to be marked individually, or, in the case of lures, are in individual packages which can be marked.

We are causing this letter to be circulated to all ports of entry by the Customs Information Exchange for the information and guidance of Customs officers.

Sincerely yours,

(Sgd.) RAYMOND E. TURNER

CORRESPONDENCE APPROVAL AND CLEARANCE

Form 100 (11-8-73)

[redacted]

Dear [redacted]

This is in reply to your letter of December 10, 1976, regarding the country of origin marking requirements for [redacted] stocking tights.

You indicate that the stockings which you propose to have imported into the United States are packaged five to a box, and are sold in these boxes, which are sealed with cellulose tape. A sample was submitted with your inquiry. The box is marked in small letters on the bottom flap, "Made in England." The London, England address of the manufacturer is also printed on the bottom flap.

Section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304), provides in general that all articles of foreign origin imported into the United States (or their containers in some instances) must be marked in a legible and conspicuous manner to indicate the English name of the country of origin to the ultimate purchaser in the United States.

Inasmuch as the stockings will be sold only in the sealed containers, we are of the opinion that the marking of these boxes satisfies the requirements of section 304, and the individual stocking legs need not be separately marked to indicate country of origin (19 U.S.C. 1304(a)(3)(C)). The language which appears on the sample box is adequate for this purpose.

The fiber content marking on the box suffices, as well. We have been informed by the Federal Trade Commission, which agency is charged with primary enforcement of the pertinent laws relating to fiber content identification, that articles which are marketed in sealed packages may be identified by marking the package rather than the article itself.

711795

The Honorable
Daniel P. Moynihan
United States Senator
Federal Building
111 W. Huron Street
Buffalo, New York 14202

Dear Senator Moynihan:

This is in further reference to a letter dated October 29, 1979, from of your staff, transmitting a brief prepared by of concerning Customs requirements regarding the exportation of merchandise under Customs supervision. In addition to the brief, has subsequently submitted letters of November 22, and December 6, 1979, expanding on the points raised in his brief and mentioned at his meeting of November 16, 1979, with us, in which your administrative aid, was in attendance.

After a very detailed review and reconsideration of the matters raised by we believe that our letter of March 21, 1979 (copy enclosed), to him is substantially correct.

basically has three areas of concern which are the following:

(1) the liability of a carrier when it files a transportation and exportation entry under its name and its bond,

(2) the non-uniformity of procedures by Customs in handling at the various Customs ports of entry merchandise designated for exportation, and

(3) the new penalty processing guidelines.

C1

As explained in our earlier letter to the carrier who files the transportation and exportation entry in his name and under his bond is liable for the

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

exportation of the merchandise under Customs supervision, as well as for the proper transportation of the merchandise from the port where the transportation and exportation entry was filed to the port of exportation. Unless a succeeding entry is filed for this merchandise in the name of another party, the carrier in such circumstances would be relieved of liability only after the Customs officer has certified on the transportation and exportation entry that the merchandise was laden on an exporting carrier which cleared for a foreign port on a designated date as verified by the export records.

The fact that the in-bond carrier may not have any control over the actions of the exporting carrier is not of legitimate concern to Customs because by filing the transportation and exportation entry in his name the in-bond carrier guaranteed the proper exportation of such merchandise. The in-bond carrier need not physically transport the merchandise itself. It may designate, in accordance with section 18.1 of the Customs Regulations, another carrier to transport such merchandise for the entire journey or for any portion of such journey. The in-bond carrier remains liable for the entire movement. Under such circumstances, the exporting carrier would be merely acting as an agent for the in-bond carrier.

In order to make it perfectly clear to carriers that when they file the transportation and exportation entry in their name they are liable for the exportation of this merchandise under Customs supervision, Customs is issuing a directive to the field to the effect that a carrier who files a transportation and exportation entry or any other type of exportation entry in its name with Customs must have on file with Customs an appropriate bond on Customs Forms 7557, 7559, 7569, 7595, or 7603.

maintains that penalty violations of section 18.8 of the Customs Regulations are often assessed against in-bond carriers, even when such carriers are not at fault. He notes that the assessment of such penalties results in the carrier having to make expensive investigations and to waste manhours in order to substantiate its innocence. Even after accomplishing this task, the carrier

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

C2

is still penalized in many instances for something over which it was not at fault. examples to illustrate this point depict three different situations.

In one situation, the transportation and exportation entry has been certified by a Customs officer that the merchandise has been exported under Customs supervision, but due to an error on the part of Customs a copy of this certified entry i not in Customs own internal in-bond files. Because of Customs errors, penalties are assessed against the carriers.

We wish to point out that numerous changes to the in-bond controls have been made to reduce Customs caused errors. The latest such action in this regard is the automation of local in-bond control files at high volume locations. This has already been done in New York, Miami, Houston, and Los Angeles and is scheduled for other high volume locations in the near future. Although Customs realizes it cannot totally eliminate this problem, we have instituted operational procedures and are seeking additional operational safeguards to minimize this problem in the future. Of course, in this situation the penalty assessed against the carrier would be cancelled.

In the second situation, the in-bond carrier does not have a certified copy of the transportation and exportation entry because the Customs officer refused to certify such entry because the actual exportation of the entry has not occurred. However, the transportation and exportation entry is stamped by the Customs officer to indicate that the merchandise has arrived at the port of exportation. believes that the in-bond carrier's liability under a transportation and exportation entry should end when the merchandise is delivered to the port of exportation, Customs is notified of this fact, and the transporation and exportation entry is stamped by a Customs officer to indicate that the merchandise was delivered to the port of exportation.

As explained earlier, when the carrier files a transportation and exportation entry in its name it is obligating itself to the exportation of such merchandise under Customs supervision. Therefore, the fact that the

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

C3

transportation and exportation entry is stamped by the Customs officer to indicate that the merchandise has arrived at the port of exportation does not satisfy the exportation requirement.

contends that Customs should request exportation information from the exporting carrier, rather than the in-bond carrier, because the exporting carrier has this information readily available. Very often, Customs does not know who the exporting carrier of a particular shipment is. In addition, the exporting carrier is merely an agent of the in-bond carrier and by filing the transportation and exportation entry in his name, the in-bond carrier obligates itself to obtaining the necessary export information for Customs.

notes that Customs at New York has a local control procedure by which they verify exportation by directly contacting export carriers, rather than in-bond carriers, for proof of exportation. New York's procedure is possible only because of its extremely high in-bond volume which necessitates a fairly large staff. This procedure represents a practical solution tailored by local considerations. Its applicability at other locations must be a local decision. There is presently no intention by Customs to implement this procedure nationwide.

In the third situation mentioned by the in-bond carrier does not have a certified copy of the transportation and exportation entry because it has been unable to locate a Customs officer to whom it can report arrival. Section 18.7 of the Customs Regulations requires that the in-bond carrier must notify Customs of the arrival of the merchandise. As a courtesy to the in-bond carrier, we permit the carrier to satisfy this obligation by submitting the entry (Customs Form 7512) to the Customs officer at the pier or location or at the airport terminal. However, if the carrier is unable to locate the inspector at such local places, it should submit the entry (Customs Form 7512) at the district or port headquarters.

Because in situations two and three, mentioned above, the carrier assumed by the filing of the transportation and exportation entry the responsibility of exporting the merchandise under Customs supervision, and neglected to do so, the penalty assessed against the carrier would not be cancelled. However, depending on the circumstances surrounding the particular case involved, the penalties originally assessed could be mitigated.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

complains of unfair treatment by Customs in assessing demands for liquidated damages for failure to export under Customs supervision. This matter is presently under study. However, there are no present plans to change our penalty processing guidelines or provide further mitigation in those instances when it can be shown that the goods were actually exported, but not under Customs supervision. These penalty guidelines were established in late 1978 to provide for uniform treatment of similar violations nationwide. Customs is interested in information which tends to show ineffectiveness or unfair treatment under these guidelines and has taken the information provided by under advisement.

believes that because of the penalties assessed against his company for such bond the surety company will not renew his company's bond. We are unaware of any case where a surety company has cancelled a carrier's bond because of the penalties assessed by Customs under such bond, unless the carrier has defaulted on the penalty and Customs has actually collected penalties due from the surety company.

If we can provide additional information or be of further assistance, please feel free to call on us.

Sincerely,

(Signed) R. E. Chasen

Commissioner of Customs

Country of Origin Marking on Abrasive Paper

This is in response to your recent request of March 23, 1981, for Internal Advice concerning [redacted] November 26, 1980, letter regarding the country of origin marking and classification of packaged rolls of abrasive paper.

We reaffirm our position as expressed in ORR Ruling 218-69 of July 17, 1969, RM 363.2 K. The country of origin of the finished rolls is the country in which the jumbo rolls are produced. Processing of the jumbo rolls as described in Canada does not effect a substantial transformation so as to make Canada the country of origin of the finished products, within the meaning of 19 U.S.C. 1304.

Please inform the importer that if the jumbo rolls are not manufactured in the United States, then the country of manufacture must be marked on the back of the abrasive paper. In order to insure that the finished products will each bear the country of origin information, the rolls must be marked at frequent intervals.

Furthermore, the Special Classification Branch is of the opinion that item 800.00, TSUS, is not applicable to abrasive paper which has been cut to size from jumbo rolls and packaged in Canada. This provision of law is limited to articles that have not been advanced in value or improved in condition abroad. Thus they conceded that processing the merchandise in Canada clearly advanced and improved the domestic product which was exported.

MAY 11 1982

MAR-2-05 CO:R:E:E
718915 FBO

This ruling concerns the country of origin marking requirements for watch cases consisting of a crystal, back and bezel.

ISSUE:

What is the country of origin of a watch case when integral parts of it are manufactured in more than one country and assembled in one or another country.

FACTS:

The importer has watch cases assembled in Taiwan from crystals, backs and bezels made in one or more countries, arriving in Taiwan in various stages of completion. Some arrive with the three pieces of the watchback assembled, then further work is done to make the cases part of completed watches. In some instances, the pieces arrive separately to be assembled with the general assembly of the watch. The importer seeks a general rule to apply to any given situation for watch cases.

LAW AND ANALYSIS:

The special marking requirements of Schedule 7, Subpart 2E, Headnote 4, Tariff Schedule of the United States (TSUS), hold that any movement, case, or dial shall not be permitted to be entered into the United States unless conspicuously and indelibly marked by cutting, die sinking, engraving or stamping. When various parts of watch cases are made in different countries, and in many instances assembled in a third, then these type of situations arise. After inspecting the watch case samples submitted to us by the importer, it is Customs position that the bezel is the predominant part of the watch case. Therefore, the country of origin of the watch case is the country of origin of the bezel.

718915

C1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

HOLDING:

The country of origin of the watch case is the country of origin of the bezel as it is the predominant part of a watch case.

MAR-2-05 CO:R:E:E
720074 DK

720074

This ruling has to do with the country of origin marking of slide fasteners assembled in the People's Republic of China.

ISSUE:

1. Are certain slide fasteners to be assembled in China primarily with materials of U.S. origin required to be marked to indicate China as the country of origin pursuant to 19 U.S.C. 1304?

2. Will the marking of the containers of the slide fasteners meet the requirements of 19 U.S.C. 1304?

FACTS:

Slide fastener chain, consisting of plastic elements (teeth) woven into the edge of cloth tape, in rolls of 2,000 or 3,000 yards or more, along with rolls of aluminum wire and sliders for the slide fastener chain are made in the United States and sent to China. Plastic separating ends of the kind generally used in winter jackets, etc., are molded in China.

Upon receipt of the U.S. materials in China the slide fastener chain is cut to the proper lengths, and the plastic separating end is molded to one end of the cut-to-length fastener chain. Once the separating end is secured, the slider is now threaded onto the chain and the top stops, made by cutting short lengths of the aluminum wire and bending them, are attached to the upper end of the slide fastener. The equipment for molding the separating end and mounting the slider, cutting the wire to length, and forming and attaching the top stop are all performed on U.S. supplied equipment.

LAW AND ANALYSIS:

Section 304, Tariff Act of 1930, as amended (19 U.S.C. 1304), provides in general that all articles of foreign origin imported into the United States shall be legibly and conspicuously marked to indicate the country of origin to an ultimate purchaser in the United States, with certain exceptions. "Country of origin" is defined in section 134.1 of the Customs Regulations (19 CFR 134.1) to mean the country of manufacture, production, or growth of any article of foreign origin entering

C9

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

the United States. Further work or material added to an article in another country must effect a substantial transformation in order to render such other country the "country of origin" within the meaning of this part.

In this case most of the components of the slide fasteners are of U.S. origin. It is stated that the value added in China compared to the total cost of the fastener is approximately 21 percent of the total cost. Nevertheless, it is obvious that the finished slide fasteners are new and different articles from the U.S. components that were sent to China. The rolls of slide fastener chain, in addition to being cut to the proper length, must undergo several other important processes in order to be converted into finished slide fasteners. The molding of the separating end, threading on of the slider and attachment of the top stops are more than mere minor assembly operations with respect to these articles. They are important steps which must be done with care and skill to make a functioning slide fastener. Accordingly, the finished slide fasteners will be considered to be products of China, for purposes of 19 U.S.C. 1304.

It is noted that the back of the slider has the letters "U.S.A." molded in the back in very small letters, which would not be conspicuous enough to meet the requirements of 19 U.S.C. 1304, if the same size letters were used to mark a foreign country of origin on an article. There will be no objection to this marking if the finished fasteners are properly marked to indicate the country of origin to the ultimate purchasers.

The ultimate purchasers of the slide fasteners will be manufacturers who use them in articles they manufacture. If the slide fasteners are imported in containers that are legibly and conspicuously marked to indicate the country of origin, and Customs officers at the port of entry are satisfied that they will reach ultimate purchasers in the marked containers, the slide fasteners could be accepted from individual marking under 19 U.S.C. 1304(a)(D).

The slide fasteners will be imported in cartons containing 100 fasteners each. The cartons will be legibly and conspicuously marked to indicate the country of origin. According to the importer, the fasteners will be sold in the marked containers only to manufacturers of apparel. None will be repackaged by the importer for resale to the retail market, nor will any be sold to other companies which would

720074

C10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

repackage them for the retail market. The ultimate purchasers will not necessarily be known at the time of importation but in these circumstances we are satisfied that the marking of the cartons will reasonably indicate the country of origin to the ultimate purchasers within the meaning of 19 U.S.C. 1304(a)(3)(D), and the individual slide fasteners may be excepted from marking.

HOLDING:

1. The assembly in China of the slide fasteners from slide fastener chain, sliders, and aluminum wire of U.S. origin, results in a substantial transformation of the U.S. components, and the finished slide fasteners will be considered to be products of China, for purposes of 19 U.S.C. 1304.

2. The slide fasteners may be excepted from individual marking under 19 U.S.C. 1304(a)(3)(D), if they are imported in cartons of 100 marked to indicate the country of origin, and they are sold only to apparel manufacturers or other ultimate purchasers in these cartons.

OCT-27 1982

720454

Dear [redacted]

This is in response to your letter of September 24, 1982, concerning alleged country of origin marking violations of certain plastic bags. The bags are imported preprinted on roll stock and are manufactured into finished bags in the United States.

It is presently the position of the United States Customs Service that the manufacturing operation of making bags from preprinted roll stock is a substantial transformation. The manufacturer of the bags is considered to be the ultimate purchaser for purposes of 19 U.S.C. 1304.

Section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304), provides generally that all articles of foreign origin imported into the United States must be legibly and conspicuously marked to indicate the English name of the country of origin to an ultimate purchaser in the United States.

Section 134.1(d)(1) of the Customs Regulations (19 CFR 134.1(d)(1)), holds the manufacturer to be the "ultimate purchaser" if he subjects the imported article to a process which results in a substantial transformation, changing the character and use of the imported article which loses its identity in the manufacturing process. Substantial transformation means that the manufacturing process is performed on an item so that the item loses its identity and becomes an integral part of a new article with a new name, character and use (United States v. Gibson-Thomsen Co., Inc., 27 C.C.P.A. 267, C.A.D. 98).

We are of the opinion in this case, and this has been verified by our local field office, that the making of bags from the preprinted roll stock changes the character and use of the imported product in such a way that substantially transforms the article to a new and different product. The manufacturer is, therefore, the ultimate purchaser. Accordingly,

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

C12

the marking of the rolls of plastic material meets the requirements of 19 U.S.C. 1304, since this marking indicates the country of origin to the ultimate purchaser. We appreciate your views on this matter, but in view of the decision in the case of United States v. Gibson-Thomsen Co., Inc., as well as other court cases defining the term "ultimate purchaser," the Customs Service cannot require the finished bags to be marked to indicate that they were made with imported plastic.

If we can be of further service to you, please do not hesitate to contact us.

Sincerely,

(signed)
Dennis Thomas

J. Dennis Thomas
Assistant Secretary
(Legislative Affairs)

720531 PRO

This ruling concerns the country of origin marking requirements for integrated circuits.

ISSUE:

Would the encapsulation process be sufficient further work to change the country of origin of the integrated circuit.

FACTS:

The importer is a manufacturer of electronic integrated circuits. The working part of the circuit is a tiny piece of silicon that is processed to form the circuit in the United Kingdom. The importer then encapsulates the silicon chips at offshore locations in the Far East (i.e., Hong Kong, Manila, Singapore and Taiwan, etc.). It is the view of the importer that the assembly process of encapsulation does not alter the circuit, but merely puts it into a form that enables it to be inserted into a printed circuit board.

LAW AND ANALYSIS:

Section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304), provides generally that all articles of foreign origin imported into the United States must be legibly and conspicuously marked to indicate the English name of the country of origin to an ultimate purchaser in the United States. Section 134.1(b), Customs Regulations, defines country of origin as the country of manufacture, production or growth of any article of foreign origin entering the United States. Further work or material added to an article in another country must effect a substantial transformation in order to render such other country the country of origin. Substantial transformation means that manufacturing process is performed on

C14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

an item so that the item loses its identity and becomes an integral part of a new article with a new name, character and use (United States v. Gibson-Thompson Co., Inc., 27 CCPA 267). Substantial transformation occurs when items are changed from producer goods-items that are neither used by, nor capable of use by, the retail consumer-into goods-items that have value and use to the consumer (Midwood Industries v. United States, 64 Cust. Ct. 499). The degree of technical skill or competence involved in the further work done on an item is also considered in determining whether substantial transformation has occurred.

We are of the opinion that the encapsulation process is sufficient to substantially transform the circuit, therefore, the United Kingdom would not be the country of origin for purposes of 19 U.S.C. 1304. The country of origin would be the country of encapsulation.

HOLDING:

The encapsulation process is sufficient work to change the country of origin of integrated circuits for purposes of 19 U.S.C. 1304.

This ruling concerns the country of origin marking requirements for unfinished rings.

ISSUE:

Whether unfinished rings need to be individually marked with their country of origin?

FACTS:

The importer has submitted samples of unfinished imported rings to Customs. The rings come from Taiwan and are finished, polished, cleaned, plated with precision metal (gold and/or Rhodium and packaged in the United States. The importer asks whether the items must be marked "Made in Taiwan."

LAW AND ANALYSIS:

Section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304) provides generally that all articles of foreign origin (or its container) imported into the United States must be legibly and conspicuously marked to indicate the English name of the country of origin to an ultimate purchaser in the United States. Section 134.1(b), Customs Regulations, defines country of origin as the country of manufacture, production of growth of any article of foreign origin entering the United States. Further work or material added to an article in another country must effect a substantial transformation in order to render such other country, the country of origin.

D2

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Substantial transformation means that a manufacturing process is performed on an item so that the item loses its identity and becomes an integral part of a new article with a new name, character and use (United States v. Gibson Thompson Co., Inc., 27 CCPA 267). Substantial transformation occurs when items are changed from producer goods-items that are neither used by, nor capable of use by the retail consumer (Midwood Industries, Inc., v. United States, 64 Cust. Ct. 499). The degree of technical skill or competence involved in the further work done on an item is also considered in determining whether substantial transformation has occured.

The process described herein by the importer amounts to a finishing operation and does not substantially change the product The goods must be marked to reflect Taiwan as the country of origin.

HOLDING:

In order to meet the requirements of 19 U.S.C. 1304, the rings must be individually marked with the country of origin.

MAR 2-05 CO:R:E:E
723427 HL

MAR 1 1 1984

Dear

This is in reply to your letter of September 30, 1983, concerning the application of Customs Regulation, 19 CFR 134.25, to the importation of bulk distilled spirits.

Customs Regulation, 19 CFR 134.25, requires that containers of repackaged J-list articles and articles incapable of being marked must be marked to indicate the country of origin of the repackaged contents by either the importer who repackages the articles or the purchaser or transferee of such articles who does the repackaging, and that the importer must certify to the district director on entry that the repackaged containers will be marked or that he will notify the purchaser or transferee of such marking requirement. The purpose of this regulation is to ensure that an ultimate purchaser in the United States is aware of the country of origin of unmarked merchandise imported and sold in containers that must be marked, notwithstanding an intervening repackaging operation.

Bulk distilled spirits are imported in large tank containers and bottled in the United States. As you indicate in your letter, country of origin labeling requirements are strictly enforced by the Bureau of Alcohol, Tobacco and Firearms. 27 CFR 5.36(e); 27 CFR 5.32. Distilled spirits imported in bulk for bottling in the United States may not be removed from the bottling plant unless the bottler possesses certificates of origin. 27 CFR 5.56. We believe that these procedures enforced by BATF will adequately ensure that the ultimate purchaser in the United States will receive notice of the country of origin of the final bottled product he purchases.

Accordingly, because BATF procedure effectively assures compliance with country of origin marking requirements, it is Customs position that the importation of bulk distilled spirits is exempt from the certification requirements of 19 CFR 134.25.

Sincerely,

(S

Dear [redacted]

723547

This is in reply to your letter of October 10, 1983, as modified by verbal instructions to our office submitted by telephone on February 13, 1984, concerning the country of origin marking requirements applicable to footwear components produced in Mexico to be assembled in the United States.

The footwear components in question include: (1) a footwear upper consisting of three major pieces of leather, cut to size and shape and sewn together; these pieces include one left and one right vamp quarter piece with metal eyelets and a moc-toe piece which extends up over the instep; each of these pieces is lined with a separate piece of leather; the vamp seams are covered at the heel and toe by small leather strips sewn over the seams; in addition, the leather at the topline has been turned over to form a tubular collar; (2) an insole unit composed of a leather sock liner, a thick layer of foam rubber, and a bottom layer of woven fabric; (2) two platform wrappers which are actually two leather straps cut to size for use as platform covers.

Following importation, the subject components are assembled together and a sole is affixed. In order to avoid the tariff classification consequences set forth in Headquarters decision dated February 2, 1984, file No. 073250 c, the uppers and insoles will be separately shipped to the United States and the platform wrappers will be shipped with either component. In that decision, the Classification and Value Division held that if the uppers and insoles were shipped together, then the importation would be considered unfinished footwear under item 700.35, Tariff Schedules of the United States (TSUS), on the theory that the upper and insole constituted a disassembled upper conforming to the criteria for unfinished footwear set forth in T.D. 79-100, General headnote 1(j)(i), TSUS. This tariff classification would not apply if the components were separately shipped. Thus, we understand that the uppers and insoles will be separately shipped and the platform wrappers will be shipped with either component.

On this basis, it is our position that the subject footwear components need not be individually marked with the country of origin inasmuch as they are "substantially transformed" into footwear in the United States by the importer who is considered the "ultimate purchaser" of the components. 19 CFR 134.35. This exception from individual marking will be granted under

DS

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

19 U.S.C. 1304(a)(3)(H), provided the uppers and insoles in question are separately shipped.

We do not reach the issue of country of origin marking requirements in the case of uppers and insoles shipped together.

Sincerely,

Darrell D. Kast
Chief, Entry, Licensing and
Restricted Merchandise Branch

Dear

This is in reply to your letter of March 29, 1984, requesting an exception from country of origin marking requirements in the case of steel nut blanks imported from Japan and Taiwan in unfinished condition.

As imported, the nut blanks will have special hole diameters. Following importation, a patented thread form will be machined into the hole with the resultant end product consisting of a free spinning, vibration resistant locknut. You estimate that the total average labor and tooling expenses incurred in the United States will amount to 50 percent of the cost of the imported blanks. Although you are aware that the imported product is a J-list article under 19 CFR 134.33 and therefore exempt from individual country of origin marking requirements, it is your claim that the domestic processing substantially transforms the imported blanks into new and different articles of commerce under 19 CFR 134.35, and that the certification requirements under 19 CFR 134.25 do not apply.

We agree. The proposed tooling and threading operations performed upon the imported nut blanks substantially transform the nut blanks thus exempting them as well as the finished locknuts from both country of origin marking requirements and filing of certification statements required under 19 CFR 134.25 for repacked J-list articles. The exception may be granted under 19 U.S.C. 1304(a)(3)(D), i.e., the nut blanks must be imported in containers that are legibly and conspicuously marked with the country of origin, and Customs officials at the port of entry must be satisfied that these containers will reach the domestic processor unopened, and that such nut blanks will be processed as herein described and not otherwise sold. Midwood Industries, Inc. v. United States, C.D. 4026 (1970); Headquarters decision dated December 13, 1978, file No. 709361.

Sincerely,

Darrell D. Kast
Chief, Entry, Licensing and

[redacted]

Dear [redacted]

This is in reply to your letter of March 26, 1984, requesting a ruling concerning the country of origin marking on a printed Melody Card.

You say that it is your intention to print the cards in Hong Kong and ship them to Taiwan where the melody modules will be assembled to them.

Section 304, Tariff Act of 1930, as amended, provides in general that all articles of foreign origin imported into the United States shall be legibly and conspicuously marked to indicate the country of origin to an ultimate purchaser in the United States, with certain exceptions.

The ultimate purchasers of the Melody Cards in question will be the ultimate recipients, within the meaning of 19 U.S.C. 1304(a). Accordingly the cards must be printed to show the country of origin. The country of origin of the Melody Cards for purposes of 19 U.S.C. 1304 would be Hong Kong, which is where the cards are printed.

Sincerely,

Darrell D. Kast
Chief, Entry, Licensing and
Restricted Merchandise Branch

DATE: AUG 14 1984

FILE: MAR 2-05 CO:R:E:E
725850 HL

TO: Director, Classification and Value Division

FROM: Chief, Entry, Licensing and Restricted Merchandise Branch

SUBJECT: Catheter Components Assembled in Mexico into Kits; Components of U. S. Origin

We transmit herewith a request for a ruling to the effect that catheter components of U. S. origin, shipped to Mexico for assembly into kits and reimported, are entitled to item 800.00 TSUS treatment and are not required to be marked to indicate Mexico as the country of origin.

In responding to the issue of item 800.00 TSUS treatment, please incorporate our views on the marking issue, i.e., it is our position that the assembly of the catheter components of U. S. origin into kits in Mexico does not effect a substantial transformation for the purposes of determining the country of origin of those components under section 134.1(b), Customs Regulations (19 CFR 134.1(b)). Accordingly, the kit which is reimported into the United States after being packaged in Mexico is not required to be marked to indicate Mexico as the country of origin or assembly for the purposes of 19 U.S.C. 1304. The goods are exempt from marking under section 134,32(m), Customs Regulations, as products of the United States exported and returned.

Dear

This is in reply to your letter of May 8, 1984, concerning the application of Customs Regulation 19 CFR 134.25 (T.D. 83-155) to importations of self-clinching fasteners or their blanks.

Bolts, nuts, and washers are J-list articles; metal blanks to be plated are likewise J-list articles, i.e., pursuant to 19 CFR 134.33, such articles need not be individually marked to indicate their country of origin. However, their container must be markeddwith the country of origin of the J-list articles therein. The new regulation, 19 CFR 134.25, requires that repackages of such articles must also be marked. If self-clinching fasteners or their blanks are J-list articles, then the new regulation will apply to their importation and repacking. (Whether an article is a J-list article depends upon its tariff classification, which you can determine by contacting the General Classification Branch at Customs Headquarters or local Customs officials.)

On the other hand, if you imported nut blanks and (prior to repackaging) "substantially transformed" them by tapping and plating, then the new Customs Regulation, 19 CFR 134.25, would not apply and the new containers would not have to be marked to indicate the country of origin of the nut blanks. Plating alone would not accomplish this transformation, but tapping would indeed result in the manufacture of a domestic article from a foreign blank. See Customs Ruling 709361 (December 13, 1978). (We assume your tapping operation will involve a threading of the blank.) We also enclose Customs Ruling 725015 (April 4, 1984)(nut blanks transformed into locknuts) and Customs Ruling 723668 (December 12, 1983) (involving the application of 19 CFR 134.25 to domestic repackaging of industrial fasteners which are not substantially transformed in the United States by domestic processing, but rather imported finished in bulk).

If you have further questions, contact us at 202-566-5765 or your local Customs officers.

Sincerely,

Signed Darrell D Kast

[redacted]

Dear

This is in reply to your letter of June 5, 1984, concerning the country of origin marking requirements applicable to automobile brake components, imported in bulk and repacked in the United States in order to be sold singly or in kits. It appears that the subject brake parts will not be sold to original equipment manufacturers.

In general, we believe that the brake parts should be individually marked to indicate their country of origin as required by section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304). If the parts were marked and then repacked in the United States, it would be unlawful for the new containers to conceal the country of origin marking, or else the new containers (if sealed or bearing a U.S. address) should also be marked to indicate the country of origin of the brake part contained therein. See new Customs Regulation 134.26, effective July 2, 1984; published in the Federal Register on June 1, 1984 (49 FR 22793).

On the other hand, section 134.34, Customs Regulations (19 CFR 134.34), provides a special exception from individual marking requirements when a special arrangement is made with local Customs officers in the case of imported articles repacked in the United States. Local Customs officers at the port of entry must be absolutely satisfied that, if unmarked articles will be repacked in the United States, the new containers will adequately indicate the country of origin of the articles. This exception is within the discretion of the district director to authorize. If such an exception is authorized, as in the case of kits, the kit container must indicate the country of origin of the parts contained therein by part. If one part may be sourced from several different countries, then a multiple listing label may be used to indicate that such part of parts may be from one or more (identified) countries. The details of such a label should be discussed with local Customs officers for approval.

Sincerely,

Darrell D. Kast

725695

[redacted]

Dear [redacted]

This is in reply to your submissions of June 29, August 20, and September 24, 1984, concerning the country of origin marking requirements applicable to imported acrylic sheets.

Acrylic sheets, of the kind classifiable under items 771.41 and 771.45, Tariff Schedules of the United States (TSUS), are generally imported in sizes of 48 inches x 96 inches, or 48 inches x 72 inches, as well as in other sizes. Currently, the country of origin marking for purposes of 19 U.S.C. 1304 may appear by means of one adhesive sticker affixed either to the plastic itself or to the masking paper used to protect the sheet during shipping and handling, or the masking paper itself may be marked.

It is your position that a significant percentage of all imported acrylic sheets is sold to the ultimate purchaser in the United States, not in the full size sheets in which imported, but rather in cut-to-size sheets. For instance, a retail consumer will enter a hardware store and purchase acrylic sheet cut to the specific dimensions he requests. The consumer may use the cut-to-size sheets as replacement windows for his home, etc. Under these circumstances, he is unlikely to receive notice of the country of origin of the acrylic sheets simply because each sheet as imported had only one marking label affixed, and when such larger sheet was cut to smaller sizes to fill his order, there is a high probability that he will not receive a cut-to-size sheet with the sticker marking. Accordingly, you suggest that Customs permit country of origin markings on no greater than 18 inch centers vertically in vertical rows spaced 18 inches apart, with the markings staggered vertically from one row to the next. You indicate that this method of marking can be easily accomplished by pre-printing the masking paper used to protect the sheets.

Section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304), requires in general that every article of foreign origin or its container must be legibly, permanently, and conspicuously marked to indicate the English name of the country of origin to an ultimate purchaser in the United States. The ultimate purchaser is generally the last person in the United States who will receive the article in the form in which it was imported. See section 134.1(d), Customs Regulations.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

D12

The rationale you set forth for requiring more than one marking on a full size imported acrylic sheet is based upon your contention that a significant percentage of all imported acrylic sheets reach the ultimate purchaser in cut-to-size sheets, and therefore unmarked. The record indicates, however, that the largest percentage of imported acrylic sheet will reach fabricators and end users in full size sheets. Fabricators who substantially transform the sheet into a new and different article of commerce are considered "ultimate purchasers." See section 134.35, Customs Regulations, and United States v. Gibson-Thomsen Co., Inc., 27 CCPA 267, CAD 98 (1940). These fabricators will indeed receive notice of the country of origin. In fact, if these fabricators receive the sheets in a properly marked container, and such container reaches the fabricator unopened, then the sheets themselves may be exempted from individual marking pursuant to 19 U.S.C. 1304(a)(3)(D). This has been Customs practice for many years, and is consistent with our practice relating to the importation of glass in sheets. See T.D. 49840(2).

A great number of end users which you identify as ultimate purchasers, i.e., industrial users, municipalities, school maintenance departments, who receive imported product in cut-to-size sheets may not be ultimate purchasers at all. For instance, municipalities and schools are not the ultimate purchasers of cut-to-size sheets for window panes when such end user contracts out the installation to a contractor who does not merely sell the panes to the end user, but also installs the panes as a complete service. Customs has taken the position that such a contractor is considered to be the ultimate purchaser in similar cases and, in this case, he would be the ultimate purchaser of the acrylic sheets. If the contractor receives full size sheets, then the percentage of ultimate purchasers receiving cut-to-size sheets with no marking is further diminished.

Basically, therefore, we are not convinced that enough ultimate purchasers in the United States receive imported acrylic sheets without country of origin markings in order to justify imposing the rather burdensome marking requirement you propose - a requirement which would be contrary to the practice currently used for marking similar merchandise, i.e., glass, plywood, particle board, etc., also imported in sheets.

Sincerely,

Steven I. Pinter

Dear

This is in reply to your submission of June 26, 1984, concerning the country of origin marking requirements applicable to a pharmaceutical product (including aerosol applicator) the components of which are imported from England. The product is for use by asthmatic patients.

According to your submission, a pharmaceutical drug will be imported from England in bulk, in crystal form. Also imported from England will be the components of the aerosol applicator, i.e., a valve, an aluminum cannister assembly (cannister and cover), and a plastic actuator assembly (tube and mouthpiece cap). In the United States, the crystal pharmaceutical ingredient will be dispersed in freon (U. S. origin) and oleic acid (U. S. origin) under carefully controlled circumstances and conditions. The aluminum cannisters will be filled with the active solution. The valves will be secured to the cannisters by means of a crimping operation, and aerosol propellants (U. S. origin) will be forced into the cannister under pressure. The filled pressurized cannister will be sold together with the actuator assembly (plastic), but may also be sold separately as a refill for the plastic actuator which is reusable.

In the United States, the bulk drug of English origin is transformed into an individual dosage drug under conditions that require substantial time and effort, cost, and sophisticated technology and equipment. We consider the domestic processing to result in a substantial transformation of the imported bulk drug into a new and different article of commerce under section 134.35, Customs Regulations. Therefore, the repackaged product is not required to be marked to indicate that the active ingredient is of English origin under section 134.25, Customs Regulations. On the other hand, the plastic actuator assembly, unlike the other imported components (such as aluminum cannister and valve), never loses its identity in the final consumer product. The plastic actuator is completed by a perfunctory assembly and can be reused with a refill cannister of pharmaceutical solution. The actuator remains a separate article of commerce and the ultimate purchaser is entitled to know its country of origin under 19 U.S.C. 1304. Accordingly, the actuator assembly shall be marked to indicate that it is a product of England (with 19 CFR 134.26 applying to require marking of repackaged product); as an alternative, it may be exempted from individual marking under section 134.34, Customs Regulations, provided the retail package indicates that the plastic actuator assembly is of English origin.

D14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

If the refill (aluminum cannister with active solution) is sold apart from the plastic actuator assembly, the retail package containing the refill is not required to be marked to indicate a foreign country of origin.

Sincerely,

Steven I. Pinter
Chief, Entry, Licensing and
Restricted Merchandise Branch

JUL 19 1984

MAR 2-05 CO:R:E:E
725818 HL

Dear

This is in reply to your letter of July 13, 1984, concerning the applicability of new Customs Regulation, 19 CFR 134.26, to importations of watches and watch products which are repackaged in the United States.

We have reviewed the sample package into which watch imports will be repacked for retail sales. The package is not sealed, but rather consists of a cardboard sleeve (open on two sides) which holds a two-piece plastic box. The plastic box is designed to permit easy access to the product so that the watch may be displayed as well as inspected by prospective consumers. The plastic box will also have an instruction booklet the context of which contains reference to a United States address to which the watch may be sent for servicing. The booklet also indicates that it is printed in the United States. We do not consider either reference to the United States to be misleading. Otherwise, the packaging bears no U. S. address.

According to 19 CFR 134.26(f), the certification requirements of the regulation do not apply to repackaging in a container that can be readily opened for inspection by the ultimate purchaser in the United States, unless such container bears a U. S. address or other potentially misleading marking. The subject packaging can be readily opened and bears no misleading addresses. Therefore, the packaging is excepted from the requirements of 19 CFR 134.26 pursuant to subsection (f).

We also note that the watch itself is marked "Assembled in Taiwan." We trust that this marking refers to the watch movement inasmuch as the country of origin of the watch is, for Customs marking purposes under 19 U.S.C. 1304, the country of origin of the watch movement (or country of assembly of the watch movement).

Sincerely,

Signed Darrell D. Kast

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

OCT 11 1984

MAR 2-05 CO:R:E:E
726103 HL

Dear

This is in reply to your submissions of August 13 and September 7, 1984, concerning the country of origin marking requirements applicable to automobile components, imported in bulk and repacked in the United States in order to be sold singly or in kits. Customs advice was previously rendered in Headquarters letter 725578. Customs position stated hereinafter supersedes the advice given in that letter.

Your company operates a distribution center in the United States. This facility receives automobile parts from both domestic manufacturing facilities and facilities located in Canada, Japan, and various other foreign countries. The domestic distribution center will handle approximately 38,400 different parts. Approximately 3,275 parts are of foreign origin. These parts will be sold individually or in kits containing from 2 to 50 parts. Sales will not be to original equipment manufacturers.

The subject automobile parts are imported in bulk and repacked in the distribution center, i.e., in individual boxes or kits. These parts may be J-list articles which are unmarked (section 134.33, Customs Regulations), or incapable of being marked (section 134.32(a), Customs Regulations), or marked. In any event, the repacked box or container must be marked to indicate the country of origin of the article therein, as required by either section 134.25 or section 134.26, Customs Regulations. In Headquarters letter 725578, we indicated that kit containers must indicate the country of origin of the parts contained therein by part. Because of the large number of part combinations in a kit, you state that identification of each part by country of origin is not feasible. You indicate, however, that you will be able to identify the specific country or countries from which the parts originate, albeit not by part. You will also be able to identify the kits which contain parts of U. S. origin.

Contrary to our position in Headquarters letter 725578, we will not require that kit containers indicate the country of origin of the parts therein by part. To the extent that it is feasible, however, you must identify the specific country or countries from which the parts in a particular kit originate. In the case of kits which are certain to contain parts of domestic origin, the following label may be used: "This kit contains articles of both U. S. and foreign origin. Articles of foreign origin are pr of (specifically identified country or countries.)" If the same part is s d from more than one country and the parts commingled so that the specific country cannot be identified, then a multiple listing label may be used as follows: "This package contains articles from country A, country B, and/or country C." E3

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

You have also requested an exemption from marking in the case of 81 parts which you believe are either J-list articles (and therefore exempt from individual marking requirements under section 134.33, Customs Regulations, in any event) or incapable of being marked with ease. You state that the remaining 3,194 foreign sourced parts are capable of being marked and will be marked by the foreign manufacturer.

As you know, articles designated as J-list articles are named in section 134.33, Customs Regulations. Bolts, nuts, washers, screws, rivets, and wire are named J-list articles and are therefore exempted from individual marking requirements. Of course, the containers of J-list articles must be marked to indicate the country of origin of the J-list articles to the ultimate purchaser in the United States. Whether an imported article is a J-list article depends upon its eo nomine tariff classification. If the imported parts are classifiable as bolts, nuts, etc., then they are J-list articles and need not be individually marked. The ultimate retail package, however, should be marked as previously indicated. In the case of articles which are not J-list articles, but nonetheless difficult to individually mark, we would not object to the granting of an exemption by local Customs officials provided such Customs officials were satisfied that the retail repackages were properly marked in accordance with the advice given in this letter. See section 134.34, Customs Regulations.

Sincerely,

Steven I. Pinter

REFER TO

MAR-3 CO:R:E:E
729002 LR

Maria Teresa Pietrok
Export Manager
Adec International
2601 Crestview Drive
P.O. Box 111

Dear Ms. Pietrok:

This is in response to your letter dated April 19, 1985, requesting a ruling on the marking requirements of certain products imported from Japan.

Your company imports dental light lenses and mounting plates from Japan. These are two of numerous components of a unit known as a "dental light and arm assembly". The remainder of the components are made in the United States. Your company assembles the foreign components with the United States components and sells the completed articles to dealers and distributors. According to your letter, the imported parts are not interchangeable with any other assemblies or finished products. You advised us by phone that your company does not sell the imported components individually.

Section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304) generally provides that all articles of foreign origin imported into the United States are required to be legibly, conspicuously, and permanently marked to indicate the country of origin to an ultimate purchaser in the United States. An imported article may be excepted from individual country of origin marking requirements under 19 U.S.C. 1304 if prior to sale, the importer substantially transforms the imported article into a new and different article of commerce. See United States v. Gibson-Thomsen Co. Inc., 27 C.C.P.A. 142, T.D. 48623 (1940).

It is our position that your company does not substantially transform the imported articles prior to sale. First, assembly alone is generally not sufficient to transform an imported article. Second, the assembly process does not result in a new article of commerce. Both before and after assembly, the imported articles are components of a dental light and arm assembly and have no other use. Although the imported components are two of many components forming the finished product, the imported lens and mounting plate are major components with independent identity and functional significance. They retain their independent identity and distinct function after assembly. We believe that the quality (and the country of origin) of the lens in particular may be of special interest to a potential purchaser.

ES

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

Since the imported articles are not substantially transformed, they must be individually marked with country of origin.

Sincerely,

Steven I. Pinter
Chief, Entry, Licensing and

PRECEDENT

DEC 3 1964

TC 363.2 c

[redacted]

PRECEDENT

Dear [redacted]

In a letter dated October 31, 1964, you requested the dutiable status of certain swivel snaps for dog and halter chains.

The sample metal swivel snaps submitted measure approximately 3 inches in length.

It is assumed that these swivelsnaps are not the product of the Communist countries listed in General Headnote 3(d), Tariff Schedules of the United States (TSUS), copy enclosed.

It is the opinion of the Bureau that this merchandise is classifiable under the provision for Harness * * * hardware, * * * not coated or plated with precious metal in item 646.97, TSUS, and dutiable at the rate of 12.5 percent ad valorem.

To insure that the merchandise will be so classified at each port at which it may be entered, this decision is being circulated to all customs officers.

Sincerely yours,

Deputy Commissioner

Enclosure 70963

[redacted]

DEPARTMENT OF THE TREASURY

U.S. CUSTOMS SERVICE

NEW YORK, N.Y.

FEB 28 1983

CLA-2-03:S:C:D7:73-43
805090

[redacted]

Dear [redacted]

In a letter dated January 13, 1983, you inquired as to the dutiable status of certain hook and loop fabrics produced in Japan.

Samples of the two fabrics in question were submitted with your inquiry. The first item is a narrow woven fabric of nylon, approximately one inch in width. The fabric has fast edges and stiff monofilament hooks which project from one surface.

The second sample, also of nylon, is a warp knit fabric which has been brushed. This brushing or napping operation has raised and broken some of the float yarns on the surface of the fabric, creating a pile-like effect. You state that this material will be imported in widths of 63 inches. After cutting to size, the female loop and the male hook fabrics form a closure when they are pressed together.

The narrow male hook fabric is classifiable under the provision for narrow fabrics of man-made fibers, in item 347.70, Tariff Schedules of the United States, and dutiable at the rate of 8 cents per pound plus 8.7 percent ad valorem. The female brushed knit fabric is classifiable under the provision for knit fabrics of man-made fibers, in TSUS item 345.50, with duty at 16 cents per pound plus 18 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Sincerely,

John J. Martuge
Area Director
New York Seaport

DEPARTMENT OF THE TREASURY

U.S. CUSTOMS SERVICE

NEW YORK, N.Y.

JAN 06 1984

CLA-2-03:S:C:D7:73-562
807872

[redacted]

Dear [redacted]

In a letter dated November 23, 1983, written on behalf of [redacted] you inquired as to the dutiable status of certain narrow fabrics produced in Uruguay.

Samples of five hook and loop tapes, ranging from 5/8 inch to 2 inches in width, were submitted with your inquiry. Each width tape consists of two woven fabrics, a female or loop pile and a male or hook pile. Both fabrics have selvages forming fast edges, and will be imported in continuous lengths. After cutting to size, the two fabrics are useable as contact closures.

Hook and loop tapes, as represented by your samples, are classifiable under the provision for narrow fabrics of man-made fibers in item 347.70, Tariff Schedules of the United States, and dutiable at the rate of 6 cents per pound plus 8.3 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Sincerely,

John J. Martuge

Siegel, Mandell & Davidson, P.C.
One Whitehall Street
New York, N.Y. 10004

Dear Mr. Stack:

Your letter of July 22, 1985, on behalf of Monette Casuals Ltd., requested this office to rule upon the tariff classification of a coat from a Far Eastern country.

The submitted woven garment is stated to be style 2092, a raincoat for ladies' wear, of fabric of 65% polyester and of 35% cotton.

Characteristics of this long-sleeved, long coat include, as follows:

1) a double-breasted, snapped, full-front opening

2) a round, stand-up collar

3) snapped sleeve cuffs

4) an open pocket on each of the fronts

5) a textile belt drawn through belt loops around the waist

6) a unit of three textile inserts, forming each shoulder

This garment is classifiable under the provision for other women's wearing apparel, not ornamented, of man-made fibers, not knit, other, other, coats, 3/4-length or longer, raincoats, women's in item 383.9035, Tariff Schedules of the United States. The rate of duty is 19¢ per lb. + 27.5% ad valorem.

This coat falls within textile category designation 635. As a product of a Far Eastern country this merchandise may be subject to quota restraints and/or a visa requirement based upon international textile trade agreements.

Mr. Y. Nakamura
Manager
UBE Industries (America), Inc.
666 Fifth Avenue
New York, N.Y. 10103

Dear Mr. Nakamura:

In your letter dated July 22, 1985, you inquired about the dutiable status of "Upilex" film from Japan.

"Upilex" is a polyamide film which has been slit into widths ranging from 8.6mm to 600mm. The furnished sample is 8.6mm in width and measures 0.001 inch in thickness. This material is described as an insulating tape which is both heat and fire proof. It will be imported without glue or other adhesive.

"Upilex" film tape will be classified according to its width as imported. Tape not over one inch in width is classifiable under the provision for strips (in continuous form), whether known as artificial straw, yarns, or by any other name, not laminated, valued over $1 per pound, in item 309.2100, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 8.6 percent ad valorem.

Tape which is over one inch but not over fifteen inches in width is classifiable as an article not specially provided for, of rubber or plastics, in item 774.5595, TSUSA. The rate of duty is 6.1 percent ad valorem.

"Upilex" film over fifteen inches in width is classifiable under the provision for film, strips, sheets ... wholly or almost wholly of rubber or plastics, which are flexible and measure not over 0.009 inch in thickness. The duty rate is 4.7 percent ad valorem in TSUSA item 771.4330.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Two World Trade Center, Suite 2238
New York, NY 10048

Dear Mr. Klestadt:

Your letter of July 26, 1985, on behalf of your client, Beldoch Industries, Inc., requested this office to rule upon the tariff classification of a woman's sweater from Taiwan. The submitted sample will be returned as you requested.

The submitted sample, style 15426, is a woman's heavy gauge knit cardigan manufactured from 100% acrylic fibers. The long sleeved garment has a full front opening with four buttons near the waist on the placket which act as a closure. The garment also features a deep V-neck, rib knit cuffs, and a pronounced rib knit waist. It also has two pockets at the waist. The garment extends from the neck to below the waist and it is intended for wear over other wearing apparel. It is considered a sweater for tariff purposes.

On the rear of the garment, small pieces of textile yarn are added to the sweater fabric in a pattern which spells out the word "ZOOM" in large, decorative letters. This constitutes ornamentation with textile fabric, noting Headnote 3(a)(iii), Schedule 3, Tariff Schedules of the United States (TSUS).

Style 15426 is classifiable under the provision for other women's, girls', or infants' wearing apparel, ornamented: of man-made fibers: knit: blouses, body suits and body shirts, shirts, and sweaters: sweaters: other, in item 383.1880, Tariff Schedules of the United States Annotated (TSUSA). The rate of duty is 37.5 percent ad valorem.

Style 15426 falls within textile category designation 646. As a product of Taiwan, this merchandise is subject to a visa requirement and quota restraints based upon international textile trade agreements.

141 South Martel Avenue
Los Angeles, Ca. 90036

Dear Mr. Appel:

In your letter of July 19, 1985, on behalf of David Ezra, you requested the tariff classification of solar panels from Israel.

The solar panels consist of several photovoltaic cells encased in a glass housing, and are used to change sunlight into electrical energy. The use of this product is beneficial in areas where DC or AC current is not practical.

The solar panels are classifiable under the provision for electrical articles and electrical parts of articles, not specially provided for: Other: Other... in item 688.42, Tariff Schedules of the United States, and dutiable at the rate of 4.3 percent ad valorem.

Articles classifiable under item 688.42, TSUS, which are the products of Israel are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. 110 East 9th Street, Suite B437
Los Angeles, California 90079

Dear Mr. Reznik:

Your letter of July 26, 1985 requested this office to rule upon the tariff classification of men's woven shorts and trousers from Korea and Hong Kong.

Three samples were submitted. Style "Bahama" is a pair of men's woven cotton walk shorts. It has two slant waist pockets on the front and two hip pockets with button closures on the rear. It has seven belt loops and a fly with a zipper closure. On the rear of the shorts, slightly below the waistband, there is a tab which when joined with a complementary buckle may be used to adjust the fit.

Style "Gregg" is a pair of men's woven cotton trousers. It has two side seam waist pockets on the front and two hip pockets with button closures on the rear. It has six belt loops and a fly with a zipper closure. On the rear of the trousers, slightly below the waistband, there is a tab which when joined with a complementary buckle may be used to adjust the fit.

Style "Alexander" is a pair of men's woven cotton walk shorts. It has two side seam waist pockets on the front and two rear hip pockets having flaps with a button closure. It has eight belt loops and a fly with a zipper closure. One of the front belt loops extends below the waistband and forms a small loop which may be used to hang the shorts or for some other purpose. On each side of the waistband there are tabs which, in conjunction with a buckle, may be used to adjust the fit.

None of the mentioned features of the three samples are considered ornamental for tariff purposes.

Styles "Bahama" and "Alexander" are classifiable under the provision for men's unornamented woven shorts of cotton in item 379.0210, Tariff Schedules of the United States. The rate of duty is 16.5 percent ad valorem.

Style Gregg" is classifiable under the provision for men's unornamented woven trousers of cotton in item 379.0240, Tariff Schedules of the United States. The rate of duty is 16.5 percent ad valorem.

FS

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Styles "Bahama", "Alexander" and "Gregg" fall within textile category designation 347. As a product of Hong Kong this merchandise is subject to visa requirements based upon international textile trade agreements. As a product of Korea this merchandise is subject to visa requirements and quota restraints based upon international textile trade agreements.

Due to the changeable nature of these agreements you are advised to contact your local Customs office prior to importation of this merchandise to determine the current status of any import restraints or requirements.

Mr. James S. O'Kelly
Barnes, Richardson & Colburn
Attorneys & Counsellors at Law
475 Park Avenue South
New York, N.Y. 10016

Dear Mr. O'Kelly:

In your letter dated July 29, 1985, on behalf of Mitsui & Co. (U.S.A.)Inc., you inquired about the dutiable status of steel side rails from Japan. You have enclosed a descriptive brochure.

The rails will be manufactured in Japan by Takebe Tekkosho Co., Ltd. according to customer specifications. Customers include U.S. truck manufacturers Kenworth, Peterbilt and Freightliner. Takebe obtains steel sheet-plate from another Japanese firm, Nippon Kohan K.K. Then Takebe presses the sheet-plate into shape, drills or punches holes in the rails, and paints them by a process of eletric deposit painting. Some of the rails may not be drilled in Japan depending upon customer specifications. Holes required for assembly will be drilled in the United States by the truck manufacturer. The side rails are specifically designed to be part of the chassis frame for heavy-duty and medium size trucks.

The steel side rails are classifiable under the provision for parts of motor vehicles in item 692.32, Tariff Schedules of the United States, and dutiable at the rate of 3.1 percent ad valorem.

This ruling is being issued under the provisions of Section 177.9(a)(1) of the Customs Regulations [19 C.F.R. 177.9(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

Mr. Andrew J. Beck
Eastport Trading Co.
P.O. Box 834
Cheshire, Ct. 06410

Dear Mr. Beck:

In your letter dated July 18, 1985, you inquired about the dutiable status of motorized vehicles from Italy.

Item 1 is a motorized electric vehicle used primarily by disabled persons. The vehicle has three wheels, a handlebar, an electric motor, a solid platform for the operator's feet, and a bench-type seat. The wheel chair is chiefly used as a means of transportation out of doors in the streets or sidewalks.

Item 2 is a three-wheel electrically driven folding caddie cart, powered by a 12V - 55Ah battery, that can carry one or two bags on a golf course.

The motorized wheel chair and motorized golf cart are classifiable under the provision for other motor vehicles in item 692.10, Tariff Schedules of the United States, and dutiable at the rate of 2.6 percent ad valorem.

Item 960.15, TSUS, provided a free rate of duty for articles specially designed for the use or benefit of handicapped persons. The duty free provision expired on August 12, 1985.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

500 Seventh Avenue
New York, N.Y. 10018

Dear Ms. Corbin:

Your letter of July 31, 1985 requested this office to rule upon the tariff classification of a jacket from Hong Kong.

The submitted, unlined, woven sample is stated to be manufactured of fabric of 100% cotton, designed for ladies' wear.

A textile flap covers the zippered portion of the full-front opening along its entire length. Snap fasteners, which are vertically placed, can close the high, stand-up collar and the waistband, the back of which is elasticized.

Four vertical pleats, which are partially sewn down, extend downwards from each shoulder to the chest area of each of the fronts. Likewise, fabric is symmetrically gathered at four locations at the lower area of each of the fronts.

One snap fastener is located on the cuff of each of the long sleeves which are detachable below each shoulder by means of snap fasteners, circularly and equidistantly placed.

As you have requested, the sample garment, which is assumed to be valued at more than U.S. $4.00, is being returned.

This garment is classifiable under the provision for other women's wearing apparel, not ornamented, of cotton, not knit, coats, valued over $4 each, other, other, other, women's in item 383.3477, Tariff Schedules of the United States. The rate of duty is 8 percent ad valorem.

The jacket falls within textile category designation 335. As a product of Hong Kong this merchandise is presently subject to a visa requirement based upon international textile trade agreements.

Due to the changeable nature of these agreements you are advised to contact your local Customs office prior to importation of this merchandise to determine the current status of any import restraints or requirements.

Dear Ms. Corbin:

Your letter of July 31, 1985 requested this office to rule upon the tariff classification of a jacket from Hong Kong.

The submitted woven sample is stated to be style 8818, of fabric of 100% cotton, designed for ladies' wear.

The full-front, zippered opening extends into the round collar which can be worn either in stand-up fashion or rolled down. A self-knotted, self-fringed drawstring which is non-decorative is drawn through a tunnel loop surrounding the waist.

One open pocket is located at the lower portion of each of the fronts. A snap fastener closes the cuff of each of the long sleeves.

Textile inserts, both of textile tape into which cording is inserted and of self-fabric, are variously placed across the garment.

As you have requested, the sample garment, which is assumed to be valued at more than U.S. $4.00, is being returned.

The garment is classifiable under the provision for other women's wearing apparel, not ornamented, of cotton, not knit, coats, valued over $4 each, other, other, other, women's in item 383.3477, Tariff Schedules of the United States Annotated (TSUSA). The rate of duty is 8% ad valorem.

The jacket falls within textile category designation 335. As a product of Hong Kong, this merchandise is presently subject to a visa requirement based upon international textile trade agreements.

Miami, Florida 33133

Dear Ms. Fontana:

Your letter of July 30, 1985, on behalf of your client, Ivore International, Inc., requested this office to rule upon the tariff classification of a ladies' jumpsuit from Hong Kong. A sample was submitted with your inquiry and will be returned as requested.

Your sample, style 330, is a ladies' jumpsuit manufactured from a 100% cotton cotton fabric. The jumpsuit features short sleeves, rear elasticized waist, an inverted expandable box pleat on the rear panel, two expandable breast patch pockets and front pockets below the waist with slant openings. Two tabs at the waist adjust the fit; one tab on each patch pocket and at the center rear flatten the expandable pleats; one tab at each ankle takes in excess fabric. None of the tabs contribute ornamentation.

The jumpsuit is classifiable under the provision for other women's, girls', or infants' wearing apparel, not ornamented or coated but with export other than overalls, overall, jumpsuits and similar articles, other than overalls, ..., and similar apparel: overalls, overall, jumpsuits and similar apparel, whether or not known as playsuits, women's, in item 384.5027, Tariff Schedules of the United States Annotated (TSUSA). The rate of duty is 20.8 percent ad valorem.

Since the fabric exceeds textile category designation 369, as a product of Hong Kong, this merchandise is subject to a visa requirement under the international textile trade agreements.

Due to the changeable nature of these agreements, you are advised to contact your local Customs Office prior to importation of this merchandise to determine the current status of any import restraints or requirements.

Dear Mr. Shatafian:

In your letter dated August 9, 1985, you inquired about the dutiable status of a veterinary gauze bandage from Korea.

The bandage is a 100 percent cotton gauze roll 6 inches wide by five yards in length. You have submitted documents from your customers that the merchandise is used in the imported length without further cutting. They are used for wrapping horses legs and tails.

The bandage is classifiable under the provision for articles not specially provided for, not ornamented, of cotton, other in item 386.5050, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 9.3 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

Roger J. Johnston

Ms. Rose Choltko
900 Brush St., #359
Las Vegas, NV 89107

Dear Ms. Choltko:

Your letter of August 6, 1985 requested this office to rule upon the tariff classification of a furniture scarf centerpiece from the Philippines. Your sample is being returned.

The scarf centetpiece measures approximately 38 by 21 1/2 inches and is manufactured from a nylon knit fabric that has been cut to size with scalloped edges. The item has embroidered leaf and flower designs with sequins and beads attached to the designs. The embroidery, sequins, and beads are considered ornamentation for tariff purposes.

The scarf centerpiece is classifiable under the provision for other furnishings, ornamented, of man-made fibers, other, in item 365.8680, Tariff Schedules of the United States Annotated (TSUSA). The rate of duty is 15.5 percent ad valorem.

The scarf centerpiece falls within textile category designation 666. As a product of the Philippines this merchandise is presently subject to visa requirements based upon international textile trade agreements.

Due to the changeable nature of these agreements, you are advised to contact your local Customs office prior to importation of this merchandise to determine the current status of any import restraints or requirements.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

for John J. Marturo

Mr. Duncan A. Nixon
Sharretts, Paley, Carter & Blauvelt, P.C.
80 Broad Street
New York, NY 10004

Dear Mr. Nixon:

Your letter of August 21, 1985, on behalf of Brooks Fashion Stores, requested this office to rule upon the tariff classification of a jacket from no specific country.

The submitted sample garment, which is pieced together from sections of contrasting denim fabric, is stated to be designed for ladies' wear, and assumed to be valued at more than U.S. $4.00.

The full-front, zippered opening of this short jacket extends through the round, stand-up collar. A textile flap, which can be secured to the body of the garment by means of snap fasteners, covers the zippered opening from the waistband to the upper edge of the neckband, behind which the stand-up collar is inserted.

Elasticized sections consist of part of the wrist of each long sleeve and of the side portions of the waistband, around which belt loops are placed.

One open pocket is located on each of the fronts and at each side of the back. One zippered pocket is located on each of the sleeves.

The sample garment has already been returned to you.

This garment is classifiable under the provision for other women's wearing apparel, not ornamented, of cotton, not knit, coats, valued over $4 each, other, other, other, women's in item 383.3477, Tariff Schedules of the United States. The rate of duty is 8 percent ad valorem.

The jacket falls within textile category designation 335. Upon importation this merchandise may be subject to quota restraints and/or a visa requirement based upon international textile trade agreements.

Due to the changeable nature of these agreements you are advised to contact your local Customs office prior to importation of this merchandise to determine the current status of any import restraints or requirements.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

Mr. Scott A. Cohn
Grunfeld, Desiderio, Lebowitz & Silverman
Two World Trade Center - Suite 2238
New York, NY 10048 - 0654

Dear Mr. Cohn:

Your letter of August 23, 1985, on behalf of Orit Imports, Inc., requested this office to rule upon the tariff classification of a knit garment from Taiwan.

The submitted sample, style No. T7944E, is constructed from 75% cotton 25% polyester knit velour fabric. The long sleeved pullover dress extends below mid-thigh. The garment features rib knit cuffs, a crew neckline and two horizontal pockets with rib knit tops located below the waist. A loosely knit 2-1/4 inch wide band of rib fabric is sewn to the bottom of the garment. The dress is not ornamented for tariff purposes.

The sample will be returned as requested.

The dress is classifiable under the provision for women's, girls', or infants' wearing apparel, not ornamented: of cotton: knit, in item 383.2910, Tariff Schedules of the United States Annotated (TSUSA). The rate of duty is 15 percent ad valorem.

Cotton dresses fall within textile category designation 336. As a product of Taiwan, this merchandise is currently subject to a visa requirement and quota restraints based upon international textile trade agreements.

Due to the changeable nature of these agreements, you are advised to contact your local Customs office prior to importation of this merchandise to determine the current status of any import restraints or requirements.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Mr. Robert D. Tsang
Fulluck International Co., Inc.
P.O. Box 447
Alhambra, Ca. 91802

Dear Mr. Tsang:

In your letter dated August 20, 1985, you inquired about the dutiable status of jute fabric and a jute bag from the Peoples Republic of China.

You have submitted a sample piece of the jute material and have indicated in previous correspondence it is composed of 80% unbleached jute and 20% plastic (man-made fiber), the chief value being the jute. In addition, you have attached a copy of a previous ruling request response, information letter 814024, wherein you indicate the jute bag is not bleached, not colored, and not rendered nonflammable. You stated during a telephone conversation with National Import Specialist Assistant Anna Labbate, that the bag will be used as a shipping bag for potatoes and other produce. In addition, you indicate the jute fabric will be imported in various lengths and widths without lines of demarcation, weighing over 4 ounces per square yard.

The jute bag is classifiable under the provision for bags and sacks, or other shipping containers, of textile materials, of vegetable fibers, except cotton, not bleached, not colored, and not rendered nonflammable in item 385.4500, Tariff Schedules of the United States Annotated (TSUSA), with a free rate of duty.

The jute fabric is classifiable under the provision for woven fabrics of vegetable fibers (except cotton), other, weighing over 4 ounces per square yard, in item 335.8500 TSUSA, and dutiable at the rate of 3.7 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

033220

Dear

In your letter of March 25, 1974, you asked to be advised of the dutiable status and classification of the following chemicals from the Peoples' Republic of China and East European countries.

Commodity	Tariff Item	Rate of Duty
Bicarbonate of Soda	420.72	Free
2,4- Dinitrochloro-benzene	403.60	7¢ per pound plus 40 percent ad valorem
Sebacic Acid	425.98	25 percent ad valorem
Sodium Molybdate	421.10	50¢ per pound on the molybdenum content plus 15 percent ad valorem
Chromic Acid	423.00	25 percent ad valorem

The products are said to be used as animal feed ingredients, synthesis of (organic) pesticides, dyestuffs, intermediates, rubber antioxidants, paints, printing inks, and rubber dyes.

We cannot furnish a binding decision on Basic Chromate Sulfate without more complete chemcial description and a statement regarding chief use.

If the DL - Calcium Pantothenate is being imported solely in the form of a vitamin it is classifiable under the provision for synthetic vitamins in item 437.82, TSUS, dutiable at the rate of 25 percent ad valorem.

[redacted]

Dear [redacted]

This is in reply to your letter of March 27, 1974, concerning the tariff status of two samples of material manufactured by [redacted]

The sample marked F-3993 consists of an outer layer of polyvinyl chloride type plastics material joined to a middle layer of a napped woven fabric (not of pile or tufted construction) which is lightly coated with a layer of polyurethane type plastics material on its napped surface. The sample weighs 53.4 ounces per square yard and has the following approximate composition by weight: polyvinyl chloride type plastics material -- 83 percent; polyurethane type plastics material -- 7 percent; woven fabric -- 10 percent. The woven fabric is composed chiefly of rayon with a small amount of cotton.

The sample marked F-4135 consists of a layer of polyvinyl chloride type plastics material laminated to a woven fabric which is composed chiefly of rayon and has a small amount of cotton. This sample weighs 61.1 ounces per square yard and is composed of 87 percent polyvinyl chloride type plastics material and 13 percent fabric by weight.

Both of the above described materials, when imported in material lengths, are classifiable under the provision for textile fabrics not specially provided for, including laminated fabrics, in item 359.50, Tariff Schedules of the United States, with duty at the rate of 25 cents per pound plus 30 percent ad valorem.

The merchandise described above may be subject to international

[redacted]

Dear [redacted]

In your letter dated January 21, 1975, you inquire as to the tariff status of copper coated steel wire, a product of Canada. A sample was submitted for examination.

The copper coated steel wire is a mild steel copper flashed wire. Its chemical composition is designed for porosity free welds in good to fair quality steels. The wire has applications for automatic and semi-automatic gas shielded metal arc welding, and for general welding of mild and low alloy steels with CO_2, Argon/Oxygen or Argon/CO_2 gas mixtures.

It is your opinion that the copper coated steel wire is classifiable under the provision for welding wire, coated or cored with flux, in item 653.15, Tariff Schedules of the United States (TSUS), with duty at a rate of 5 percent ad valorem. We cannot agree.

The copper coating is not used as a flux. Its prime function is to protect the steel from rust and other elements that would effect the steel during storage and prevent oxidation of the steel which in turn would cause defects in the weld. Secondly, the copper is used to furnish a smooth surface during the feeding operation between the wire feeder and the electrode holder. It should also be noted that the coating is used to improve the electrical contact between the electrode (steel wire) and the nozzle of the electrode holder. Therefore, since the copper coating of the steel wire does not act as a flux, it cannot be classified under item 653.15, TSUS.

In our opinion, if the copper coated steel wire is not composed of alloyed iron or steel as defined in Schedule 6, Part 2, Subpart B, Headnote 2(h)(ii), it would be classifiable under the provision for round iron or steel wire, other than alloy iron or steel; under 0.060 inch in diameter, in item 609.40, TSUS, with duty at a rate of 8.5 percent ad valorem; if

A7

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

0.060 inch in diameter or over, and containing not over 0.25 percent by weight of carbon, then item 609.41, TSUS, would be applicable with duty at a rate of 0.3 cent per pound. If the copper coated steel wire is composed of alloyed iron or steel, it would be classifiable under item 609.45, TSUS, and dutiable at a rate of 10.5 percent ad valorem, plus additional duties under items 607.01 - 607.04, where applicable.

Sincerely yours,

Arthur P. Schiffler

Dear

In your letter of February 28, 1975, you asked for information about the tariff classification of eight pesticides stated to be products of West Germany.

The pesticides BAY DRW 1139 (4-Amino-3-methyl-6-phenyl-1,2,4-triazin-5 (4H)-one); BAY MEB 6447 (1-(4-Chlorophenoxy)-3,3-dimethyl-1-(1H,2,4-triazol-1-yl)-2-butanone); BAY BUE 1452 (1-(Tricyclohexylstannyl)-1-H-1,2,4-triazole) assumed to be derived in part from benzenoid products; BAY HOX 1901 (2-[(Ethylthio)methyl]phenol methylcarbamate); BAY MEB 6046 (3,4-Dichloro-a-(trichloromethyl)benzenemethanol acetate); BAY NTN 6867 (O-Methyl O-(4-methyl-2-nitrophenyl)(1-methylethyl)phosphoramidothioate) are classifiable under the provision for benzenoid pesticides in item 405.15, Tariff Schedules of the United States (TSUS), with duty at the rate of 1.7 cents per pound plus 12.5 percent ad valorem.

The pesticides BAY DAM 18654 (Methyl[1-[[(5-cyanopentyl)amino carbonyl] -H-benimidazol-2-yl] carbamate); and BAY MET 1486 (N-[5-(Ethylsulfonyl)-1,3,4-thiadiazol-2-yl]-N,N-dimethylurea are classifiable under the provision for other nitrogenous compounds, other, in item 425.52, TSUS, with duty at the rate of 1.5 cents per pound plus 7.5 percent ad valorem.

Benzenoid products which are competitive with similar products of domestic origin are subject to ad valorem rates of duty based on the American selling price of the domestic product.

Sincerely yours,

Salvatore E. Caramagno
Director
Classification and Value Division

REPLY TO COMMISSIONER OF CUSTOMS, WASHINGTON, D.C. 20229

65315

AUG 0 8 1975

CLA-2:R:CV:MA
041236 E

Mr. Louis A. Mazzano
District Director of Customs
Detroit, Michigan 48226

Director, Classification and Value Division R:CV

Classification of Mig copper coated wire electrode. Internal Advice No. 223/75.

The sample submitted consists of steel wire with a light coating of copper and is under 0.060 inch in diameter.

The issue presented is whether the sample is classifiable under the provision for wire, electrodes and similar articles, of base metal, coated or cored with flux, of types used for soldering, brazing, welding or deposition of metal, in item 653.15, Tariff Schedules of the United States (TSUS), or is classifiable under the provision for round steel wire, other than alloy steel, under 0.060 inch in diameter, in item 609.40, TSUS. Since the provisions of item 653.15 are more specific, if applicable, than the provisions of item 609.40, it is necessary to consider first the applicability of item 653.15. In this connection, the question arises as to whether the copper coating may be considered a flux. The subject wire is used in welding.

In an unpublished decision dated April 24, 1975 (038432), involving similar wire, it was stated:

> The copper coating is not used as a flux. Its prime function is to protect the steel from rust and other elements that would effect the steel during storage and prevent oxidation of the steel which in turn would cause defects in the weld. Secondly, the copper is used to furnish a smooth surface during the feeding operation between the wire feeder and the electrode holder. It should also be noted that the coating is used to improve the electrical contact between the electrode (steel wire) and the nozzle of the electrode holder. Therefore, since the copper coating of the steel wire does not act as a flux, it cannot be classified under item 653.15, TSUS.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

A10

We have considered the contentions advanced by the importer but they do not establish that the copper functions as a flux. Accordingly, following our prior decision of April 24, 1975, the copper coated steel wire is properly classifiable under item 609.40, TSUs.

You should inform the inquirer of this decision and may furnish him a copy.

(Signed Arthur P. Schifflin

DEPARTMENT OF THE TREASURY
U.S. CUSTOMS SERVICE
CUSTOMS INFORMATION EXCHANGE

March 23, 1977

CLA-2:R:CV:MC
045891 WJA

District Director of Customs
Portland, Oregon 97209

Dear Sir:

Re: Decision on Application for Further Review of Protest #2904-5-000364

This protest was filed against your decision in the liquidation on August 1, 1975, of entry No. 45730, dated October 9, 1974. The entry was filed at the port of Columbia River - Portland, Oregon.

The entry covers merchandise invoiced as "White Machine Glazed Cap Manifold Paper", a sample of which was submitted with the protest. The submitted sample is a sheet of white tissue paper, one side of which has been glazed, and which weighs over 9 pounds but less than 18 pounds per ream. The sample possesses transparent qualities, a printed text being easily readable through it. When drawn upon with a fountain pen the paper absorbed the ink both laterally and vertically.

045891

The protestant contends that the above described paper is classifiable under the provision for other paper not specially provided for, not impregnated, not coated, not surface-colored, not embossed, not ruled, not lined, not printed, and not decorated, weighing over 9 but not over 18 pounds per ream, in item 252.79, Tariff Schedules of the United States (TSUS), dutiable at the rate of 1/2 cent per pound plus 2 percent ad valorem. Customs officers classified the entered paper under the provision for copying paper in item 252.42, TSUS, dutiable at the rate of 1.2 cents per pound plus 3.7 percent ad valorem.

The decision of this protest centers about both the description of the merchandise as entered, as well as its chief use. Definitions of "Cap" and "Manifold" are as follows:

> Cap a size of wrapping (bag) paper. 24 x 19 1/2 inches. Double bag is 39 x 24 inches, "Havon" cap is 26 x 21 inches, and "Kent" cap is 21 x 18 inches. The term is also applied to writing paper, the size being 14 x 17 inches. It is also an abbreviation for foolscap.

Dictionary of Paper, Second Edition, 1951, p. 94

A12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

> Manifold Paper (Tissue) - Paper used for copies by interleaving with carbon paper on the typewriter. It is typical bond paper made in light basis weights of 7 to 9 and sometimes 10 pounds (17 x 22 - 500). Normally it is manufactured with an unglazed or cockle finish, although sometimes it is machine glazed. Finish and porosity are important properties in addition to those normally possessed by bond paper, although in manifold paper printing quality is not as essential.

Dictionary of Paper, Third Edition, 1965, p. 288

An analysis of the description of the merchandise as invoiced, which indicates from the presence of the words "Cap" and "Manifold" that the paper is used for either wrapping or manifolding, (copying) purposes, or both, gives little indication how it should be classified.

The protestant had stated to Customs officers on the occasion of the prior importation of the same merchandise through the port of San Francisco, that the subject paper "is used in the retail trade for packaging such items as hats, shoes, handbags, etc." The purchase order on the occasion of the prior importation described the merchandise as "wrapping tissue paper."

A definition for "copying paper" as used in the TSUS, is as follows:

> Copying paper is a thin tissue formerly used widely in producing copies of letters written in copying ink. It has high tensile strength, is unsized, and absorbs ink downwards instead of laterally, rendering three or more copies. As a result of modern copying methods, this type of paper has become virtually obsolete in the United states (emphasis added).

United States Tariff Commission, Summaries of Trade and Tariff Information, Schedule 2, Vol. 3, at 11/ (1968).

We lack evidence at this time showing that the merchandise as imported, is either actually or chiefly used as "copying paper" although it appears similar to papers found classificable in item 252.79, TSUS, in previous ruling letters. From the above definition it also appears highly unlikely that the merchandise is, in fact, "copying paper". Further, the protestant's statements on the occasion of a prior importation tend to indicate that the merchandise is of a type intended to be used for wrapping hats, shoes, etc. There being nothing other than apparent incongruity in the description of the merchandise as entered to support the proposed classification of the merchandise as copying paper, we find that it is properly classifiable in item 252.79, TSUS.

045891

A13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Accordingly, you are directed to allow the protest in full.

Your file is returned.

Sincerely yours,

Salvatore E. Caramagno
Director
Classification and Value Division

[redacted]

Dear [redacted]

This is in reply to your letter dated May 5, 1976, which forwarded a letter from [redacted], concerning the tariff status of "Casino M" furniture upholstery material from Canada. One swatch was submitted.

"Casino M" is described as a vinyl plastic laminated to a needle-punched polyurethane foam/polyester fiber backing, and it is stated that the subject merchandise will be imported in rolls approximately 54 inches in width and 25 yards in length. It is further stated that the subject merchandise is comprised of polyvinyl chloride plastic which constitutes 78 percent of its weight and costs 52 cents per yard, polyurethane foam which constitutes 4 percent of its weight and costs 5 cents per yard, and polyester fiber which constitutes 18 percent of its weight and costs 37 cents per yard. It is further stated that the polyester fiber is needle-punched to the polyurethane foam, that this needle-punched material is then laminated to the polyvinyl chloride plastic, and that the exterior surface of the plastic portion is then finished by surface printing, embossing, and coating with protective lacquers. It is submitted that the subject merchandise is precluded from classification as a textile product under Schedule 3, Tariff Schedules of the United States (TSUS), by virtue of the fact that the loose polyester fibers are needle-punched directly into the polyurethane foam and therefore never exist in their own right as a nonwoven fabric. It is contended that the plastic component constitutes the greatest portion in both weight and cost and imparts the essential character of the subject merchandise and that, therefore, the merchandise is classifiable under the provision for other flexible sheets, wholly or almost wholly of rubber or plastics, not of cellulosic plastics materials, in item 771.42, TSUS, with duty at the rate of 6 percent ad valorem.

Polyester fibers are man-made fibers which are included in the term "textile materials" under Headnote 2(a)(i), Schedule 3, TSUS, a copy of which is enclosed for your reference. Based on available information, it

045906

B1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

[redacted]

is our belief that the polyester fibers come off a card in the form of a web and that this web is in turn needle-punched to the polyurethane foam. It is our opinion based on the submitted information that the needle-punched material is a fabric in chief value of man-made fibers which is laminated to the polyvinyl chloride plastic. The subject merchandise, when imported in the piece, is considered to be a textile product in accordance with Headnote 4(b), Schedule 3, TSUS, which states as follows:

> In determining the component fibers of chief value in coated or filled, or laminated, fabrics and articles wholly or in part thereof, the coating or filling, or the nontextile laminating substances, shall be disregarded in the absence of context to the contrary.

Accordingly, the subject merchandise, as described above and as represented by the submitted sample, is classifiable under the provision for textile fabrics, including laminated fabrics, not specially provided for, of man-made fibers, in item 359.50, TSUS, with duty at the rate of 25 cents per pound plus 30 percent ad valorem.

Sincerely yours,

(Signed) James W. O'Neil

Dear [redacted]

In your letter of July 2, 1976, you inquire as to the dutiable status of accessory tanks for nuclear power plants manufactured in Japan. Descriptive literature was submitted for examination.

The volume control tank is designed to accommodate changes in reactor coolant volume and to control reactor coolant hydrogen concentration by control of hydrogen gas overpressure. The tank has a maximum operating level of 27,525 pounds (3,300 gallons), a design pressure of 75/15 PSIG, and a normal operating temperature of 120° F. The spent resin tank is designed to store spent radioactive resins prior to sluicing them under nitrogen pressure to the drumming station. The tank has a full operating level of 29,360 pounds (3,200 gallons), a normal operating temperature of 120° F, and a design pressure of 50/0 PSIG. The reactor drain tank is designed to collect reactor coolant from miscellaneous leakoffs and drains prior to processing for re-use or disposal. The tank has a maximum operating level of 10,840 pounds (1,300 gallons), a normal operating temperature of 120° F, and a design pressure of 25/15 PSIG.

It appears that none of these tanks have provisions made for circulating heating or cooling fluids between the walls, or mechanical or thermal equipment such as agitators, heating or cooling coils, or electrical elements.

Accordingly, the volume control tank, spent resin tank and reactor drain tank are classifiable as tanks, of metal, having a capacity over 75 gallons and ordinarily installed as fixtures in industrial

[redacted]

Dear [redacted]

This is in reply to your letter of July 7, 1976, concerning the tariff status of "shoddy pads" manufactured in Taiwan.

The submitted sample is a matted padding or fabric of nonwoven textile fibers, stated to be in chief value of man-made fibers. You indicate that the merchandise is derived from new cloth which has been ground up and processed through a combing machine. Then it is apparently needle punched and lightly surface treated on both sides with a resinous substance that is not visually apparent. The product is stated to be used as an insulator pad attached to both sides of a mattress spring for the purpose of keeping the filling material in the mattress from falling into the coils of the mattress spring.

Merch ndise as represented by the submitted sample is classifiable under the provision for webs, wadding, batting and nonwoven fabrics, including felts and bonded fabrics, and articles not specially provided for of any one or combination of these products, of man-made fibers, in item 355.25, Tariff Schedules of the United States, with duty at the rate of 12 cents per pound plus 15 percent ad valorem.

The merchandise described above may be subject to international textile trade agreements. If you desire further information in this regard, it is suggested that you write directly to our Duty Assessment Division, enclosing a copy of this letter and a sample of the merchandise with your inquiry.

Sincerely yours,

[redacted]

Dea[redacted]

This is in reply to your letter of March 17, 1977, on behalf of [redacted] concerning the tariff classification of four submitted sample materials manufactured in Canada. You advised that the merchandise will be imported either in rolls of continuous lengths, or in lengths of 36 inches for further processing in the United States into various sizes and shapes for insulation in electrical instruments and apparatus.

The sample designated Westinghouse 44783JJ Laminate (sample 1) is stated to be constructed by laminating a 0.003 inch thick mat of nonwoven polyester textile fibers to each side of a sheet of stiff polyester film, stated to be 0.014 inch thick. Each of the polyester mats comprises 7.85 percent of the merchandise by weight and the polyester film accounts for 82.73 percent of the merchandise by weight. The polyester adhesive used in the lamination process comprises the remaining 1.57 percent of the merchandise.

The sample designated Insulec 7-E6-015 (sample 2) is stated to consist of a woven fiberglass fabric that weighs 8.38 ounces per square yard, which has been coated on both sides with an epoxy varnish that weighs 6.92 ounces per square yard. We assume the varnish is a plastics material. The fiberglass fabric constitutes 55 percent of the merchandise by weight while the epoxy varnish constitutes the remaining 45 percent of the merchandise by weight. The epoxy varnish is both visible and significant and results in the merchandise resembling a stiff piece of plastic.

051306

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B6

The sample designated Westinghouse 42343 BU (sample 3) consists of four layers of material that have been laminated together by an unidentified adhesive. The adhesive is stated to constitute 14.46 percent of the merchandise by weight. You state the outside layers of the merchandise are made of a paper-like material called Dupont Nomex .005 Aramid paper, one layer of which weighs 3.46 ounces per square yard and comprises 27.05 percent of the merchandise by weight while the other layer weighs 1.859 ounces per square yard and comprises 14.52 percent of the merchandise by weight. The inner two layers are indicated to be of a 0.003 inch thick layer of polyester film, which weighs 3.20 ounces per square yard and which comprises 25.05 percent of the merchandise by weight, and a 0.04 inch thick woven fiberglass fabric which weighs 2.43 ounces per square yard and comprises 18.95 percent of the merchandise by weight. Our information is that the aramid paper-like layers are made from man-made fibers in a wet lay paper making process. However, the paper making machines have been modified because of the additional volume of water required by the man-made fibers. Accordingly, the paper-like layers are considered nonwoven textile fabrics for tariff classification purposes.

The sample designated Insulec 4-K2-015 (sample 4) is stated to consist of a woven fiberglass fabric that comprises 21.7 percent of the merchandise by weight, which has been coated or filled with a yellow varnish material that comprises 78.29 percent of the merchandise by weight. According to informal tests conducted by a Customs laboratory, the varnish is made of linseed or fatty oil type composition and is nonplastic in nature.

Merchandise as represented by samples 1 and 3 is classifiable under the provision for textile fabrics not specially provided for, including laminated fabrics, in item 359.50, Tariff Schedules of the United States (TSUS), with duty at the rate of 25 cents per pound plus 30 percent ad valorem.

Merchandise as represented by sample No. 2 is classifiable under the provision for woven or knit fabrics, coated or filled or laminated with rubber or plastics material, of man-made fibers, not over 70 percent by weight of plastics material, in item 355.82, TSUS, with duty at the rate of 12.5 cents per pound plus 15 percent ad valorem.

051306

B7

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

[redacted]

[redacted]

Merchandise as represented by sample No. 4 is classifiable under the provision for woven or knit fabrics of man-made fibers, coated or filled, not specially provided for, in item 356.40, TSUS, with duty at the rate of 12 cents per pound plus 15 percent ad valorem.

You indicate that all materials are originally imported into Canada from the United States for assembly and processing prior to their return to the United States. In such an event, merchandise represented by samples 1 and 3 may be eligible for classification under item 807.00, TSUS. If you desire more information in this regard, please submit samples of the merchandise in its condition as exported from the United States, detailed descriptions of the processes to which that merchandise is subjected to in Canada, and samples of the merchandise exported from Canada to the United States and we will rule accordingly.

Sincerely yours,

(Signed) JAMES W. O'NEIL

[redacted]

Dear [redacted]

This is in reply to your letter of April 27, 1977, concerning the tariff status of PVC sheeting with a polyester substrate. We assume that the merchandise is a product of Canada.

The submitted sample consists of a nonwoven fabric of man-made fibers that has been laminated to a sheet of grained or embossed plastics material. The nonwoven portion is stated to be formed by needle punching polyester fibers into a sheet of polyurethane foam which weighs 0.5 ounces per square yard and is 0.04 inches thick. The resulting substrate weighs 6.5 ounces per square yard. The nonwoven fabric is then heat laminated to a preexisting sheet of plastics material, which weighs 12 ounces per square yard. The finished product weighs 19 ounces per square yard and will be imported in widths of 54 inches. All the above information was obtained from submissions accompanying your letter.

Assuming that the value of the polyester fibers exceeds the value of the polyurethane foam into which they have been needle punched, the merchandise is classifiable under the provision for textile fabrics not specially provided for, including laminated fabrics, of man-made fibers, in item 359.50, Tariff Schedules of the United States, with duty at the rate of 25 cents per pound plus 30 percent ad valorem.

051877

Sincerely yours,

Albert Loeb

[redacted]

Dear [redacted]

This is in reply to your letter of September 14, 1977, concerning the tariff status of two types of material. You indicate that the merchandise will be imported from a "beneficiary developing country."

Both samples are quilted material. One is about 1/2 inch thick and is composed of a textile fiber batting sandwiched between two layers of woven textile fabrics. The three layers are stitched together with a chevron pattern. The second sample is less than 1/4 inch thick and is composed of four layers of material. One of the outside surfaces is formed by a burlap-type woven fabric and the other surface is formed by a knit man-made fiber fabric. Between these two fabrics is a batting of textile fibers and a layer that resembles tissue paper. This material is also stitched together in a chevron pattern.

We assume that the merchandise will be imported in material lengths and not made up into articles. Merchandise as represented by both samples and as described above is classifiable under the provisions for textile fabrics, not specially provided for, according to the component material of chief value in that merchandise, in items 359.10 through 359.60, Tariff Schedules of the United States (TSUS), copy enclosed. The rates of duty in column 1 are applicable to beneficiary developing countries.

For your information, an article is in chief value of a material if such material exceeds in value each other single component material of the article.

05-3668

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Dear

Your letter of October 21, 1977, requests a binding decision on the classification and import duties applicable to the following products:

1. Boric Acid
2. Hexamethylenetetramine
3. Caustic Soda
4. Acetophenone

You state that you anticipate importing these products from West European and most favored nations.

Boric acid is classified by name under the provision for inorganic acids in item 416.10, of the Tariff Schedules of the United States (TSUS), and is dutiable at the column 1 rate of 0.4 cent per pound.

Hexamethylenetetramine is classified by name under the provision for nitrogenous compounds in item 425.18, TSUS, and is dutiable at the column 1 rate of 2.2 cents per pound.

Caustic soda is classifiable under the provision for sodium compounds in item 421.08, TSUS, and is dutiable at the column 1 rate of 0.2 cent per pound.

Perfume grade acetophenone is classifiable under the provision for aromatic or odoriferous compounds obtained, derived or manufactured from benzenoid sources in item 408.60, TSUS, and is dutiable at the column 1 rate of 3.5 cents per pound plus 22.5 percent ad valorem. Technical grade acetophenone is classifiable under the provision for benzenoid intermediates in item 403.60, TSUS, and is dutiable at the column 1 rate of 1.7 cents per pound plus 12.5 percent ad valorem. Benzenoid products of United States origin are subject to ad valorem rates based upon the American selling price of the domestic product.

Request for Internal Advice No. 174-77, concerning the tariff classification of a woman's two-piece set

The referenced Internal Advice request concerns the tariff classification of a woman's knit two-piece set manufactured in Hong Kong. The top portion of the set is a rib knit blouse-like garment that is labelled to be 40 percent wool and 60 percent acrylic. The bottom portion of the set is a culotte or gaucho-type garment that is labelled to be 90 percent wool and 10 percent nylon and is made from a multicolored plaid woven fabric. The two garments are similarly colored but are not color matched.

The top garment is made of two pieces of knit fabric that have been stitched together along the lower arm seams and the side seams. It has elbow length kimono style sleeves. The two fabrics forming the garment are stitched together at three points along the top portion of each side of the neck opening. These stitched joints hold the shoulder and sleeve areas together and form the neck opening. Stitched above each of these joints is a fabric covered button. The fabric portion of each button is knit and is the same color as the body of the blouse. The buttons perform no functional purpose or use themselves, although the stitching which holds the buttons in place may, to a small extent, serve to strengthen or reinforce each of the knitted joints. One inch wide strips of striped knit fabric has been used as capping on the unfinished edges of both fabrics at the top of the garment. The visible portion of the capping, about 1/2 inch, contains 4 stripes that extend the entire length of the capping. Two of the stripes are beige, one is black, and one is the same color as the body of the garment.

054329

B14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

The bottom garment has a waistband with 1-1/2 inch wide belt loops of matching plaid fabric. The belt is also made of the same plaid fabric. There is a plaid fabric covered button on the lower portion on each of the four belt loops. The button is stitched in place with the stitching extending through the belt loops and the body of the garment. The buttons themselves perform no functional purpose. However, the stitching which holds the buttons in place also holds the bottoms of the belt loops to the garment.

Textile fabric is one of the forms of ornamentation listed in Headnote 3, Schedule 3, Tariff Schedules of the United States (TSUS). Since the fabric covered buttons themselves perform no functional purpose, the fabric on those buttons constitutes ornamentation for tariff purposes and both garments are classifiable under the ornamented provisions of the tariff schedules.

For tariff purposes, wearing apparel sets are not classifiable as entireties, assuming other criteria are met, if (1) the components are not the same color; or (2) the components do not contain the same colored stripe or pattern or that stripe or pattern does not create a substantial visual connection between the garments; or (3) one of the garments in the set has a stripe or pattern effect and all the garments do not have the same single predominant color or color combination.

Based on the above, the two garments comprising the instant wearing apparel set do not constitute an entirety and are separately classifiable. Accordingly, each of the garments is classifiable under the provisions for other women's or girls' ornamented wearing apparel, in either item 382.02, TSUS, if in chief value of wool, or, if in chief value of man-made fibers, in item 382.04, TSUS.

You also asked for guidance on the classification of wearing apparel sets which consist of both knit and not knit components. Generally, such sets, if entireties for tariff purposes, are classifiable as either knit or not knit according to their predominate and characteristic part. See Cimbel Bros. Inc. v. United States, 7 Cust. Ct. 46, C.D. 531 (1941); Benson Manufacturing Corp. v. United States, 18 CCPA 391, T.D. 44640 (1931); T.D. 72-134; and I.A. 108/75, 041259, dated January 6, 1975.

C1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

054329

ORR Ruling 72/429 abstracted as T.D. 72-340(27), concerns the tariff classification of garments which contain both knit and not knit parts and no part is clearly predominate and characteristic. Although that ruling concerns the tariff classification of a single garment, the reasoning there is equally applicable to wearing apparel sets which consist of more than one garment.

Accordingly, where a set of garments which is classifiable as an entirety for tariff purposes contains knit and not knit garments, neither of which is predominate and characteristic of the set, and it is necessary for tariff classification purposes to categorize that set as either "knit" or "not knit" because those are the two competing tariff descriptions under the same superior headings under equally specific superior headings which are equally applicable, General Headnote 10(d), TSUS, applies. Therefore, the article is properly classifiable under the provision with the highest original statutory duty rate, or if both original statutory duty rates are equal, then under the provision which first appears in the tariff schedules.

[redacted]

Dear [redacted]

Your letter of December 5, 1977, concerns the dutiable status of a product of West Germany called "Sea-Bond Denture Adhesive Cushions." A sample of the product was submitted and consisted of two sheets of nonwoven synthetic fabric with a layer of water soluble adhesive between them. The adhesive is not discernable even when the layers are separated. The cushion which is "U" shaped to fit dentures and is used to hold dentures in place without utilizing pastes or powders.

Alternative classifications for the product are suggested. It is felt that the provision for dental cements, item 495.15, Tariff Schedules of the United States (TSUS), is appropriate, as the product is used for retention purposes. However, this provision covers the ordinary type cements, which are chemical mixtures and does not contemplate a product such as "Sea Bond" which is essentially a textile fiber article.

Alternatively, you suggest that since this is a relatively new article, that item 799.00, TSUS, might apply. This provision covers any article, not provided for elsewhere in the schedules. No imported article can be classified under this item until all other classification possibilities are exhausted.

Although the product is not a cement or medicinal, it is essentially a textile article; accordingly, it is correctly classifiable under the provision for articles of nonwoven fabrics not specially provided for, of man-made fibers, in item 355.25, TSUS. The rate of duty is 12 cents per pound plus 15 percent ad valorem.

Sincerely yours,

[redacted] (Signed) JAMES W. O'NEIL

[redacted]

Dear [redacted]

In your letter of February 9, 1978, you inquire on behalf of [redacted] as to the tariff status of the Hudig Ironmat sprinkler system manufactured in West Germany.

The Hudig Ironmat sprinkler system is an agricultural field irrigation system. It consists of a sprinkler carriage, a drum reel, and a long length of semi-flexible polyethylene pipe, 800 or 1,000 feet. In operation the sprinkler carriage is pulled the length of a field from the drum reel by a tractor. Connecting the carriage to the drum reel is the polyethlene pipe through which water may flow. The stationary drum reel winds the sprinkler carriage towards itself as it irrigates. The drum reel, driven by a water piston, revolves slowly during operation and at the same time rolls up the pipe. The speed is adjustable. The water supplied by the delivery pipe flows through the tubular axis and the polyethylene pulling pipe to the spinkler which is installed on a 3-wheeled skid or carriage. The Ironmat has an automatic, double-acting stop mechanism for stopping the sprinkler carriage when it reaches the drum. The pipe is highly resistant to damage, but if damaged in some way it can be repaired on the spot by means of a plastic welder.

At a conference on March 30, 1978, attended by [redacted] and [redacted] it was brought out that we had previously ruled on an irrigation machine called the Touraine 90 which appeared to be similar, and held it to be classifiable under the provision for other mechanical appliances for projecting, dispersing or spraying liquids, in item 662.50, Tariff Schedules of the United States (TSUS). [redacted] in a letter dated April 12, 1978, distinguishes the Hudig Ironmat from the Touraine 90 stating that the latter machine has a water turbine drive unit to pump liquids with solids such as sewage effluent disposal and is used for that purpose. The Hudig Ironmat is equipped with a reciprocating piston pump drive which can only be used for the pumping of clear liquids, and is, therefore, restricted to irrigation use.

+ 053143
C4

[redacted]

056279

Whether the apparatus pumps liquids, or liquids with solids, is not enough to put the irrigation systems into different classes. We therefore are of the opinion that the Hudig Ironmat sprinkler system is within the provision for other mechanical appliances for projecting, dispersing or spraying liquids, in item 662.50, TSUS.

[redacted] in their letter of April 12, 1978, also contend that the Hudig machine should be classified under the provision for machinery for soil preparation and cultivation in item 666.00, TSUS, or alternatively, under the provision for sprayers suitable for agricultural or horticultural use in item 662.45, TSUS.

Item 662.50 is in Subpart A of part 4, Schedule 6, TSUS. Item 666.00 is in Part 4. Headnote 1 of Subpart A provides that a machine or appliance which is described therein and also is described elsewhere is Part 4, is classifiable in Subpart A. Accordingly, if the Hudig machine were within the provision for soil preparation and cultivation in item 666.00, TSUS, it cannot be so classified.

With respect to the claim for classification under item 662.45, TSUS, the record does not establish that the Hudig machine is commonly or commercially known as a sprayer. Rather the data you submitted showns that it is an irrigation system. Accordingly, it cannot be classified under that provision of law.

In view of the foregoing, the Hudig Ironmat sprinkler system is classifiable under the provisions of item 662.50, TSUS, dutiable at the rate of 5 percent ad valorem. The plastic welders are classifiable under the provision for machines not specially provided for in item 673.50, TSUS, dutiable at the rate of 5 percent ad valorem.

Sincerely yours,

[redacted] Arthur P. Schifflin,

Dear

This is in reply to your letter of January 2, 1978, concerning the tariff status of a certain chemical substance. No country of origin was given. A sample was submitted.

The submitted sample is a white crystalline material which you state is boric acid. However, a Customs laboratory analysis of the sample indicates that it is refined sodium borate and not boric acid.

Merchandise, as represented by the submitted sample, is classifiable under the provision for sodium compounds, borate, other, in item 420.78, Tariff Schedules of the United States, (TSUS), with duty depending on the country of origin, either at the column 1 rate of 0.06 cent per pound or at the column 2 rate of 0.125 cent per pound. Column 2 rates of duty are applicable to products of those countries listed in General Headnote 3(e), TSUS, copy enclosed. Products of all other countries are entitled to column 1 rates of duty.

If the country of origin of the merchandise is a designated beneficiary country for purposes of the Generalized System of Preferences, the merchandise may qualify for duty free entry. A copy of General Headnote 3(c), TSUS, is enclosed for your information.

Sincerely yours,

(Signed) James W. O'Neil

Tariff classification of halter and short sets from [redacted]

The submitted samples are two sets of girls' halter tops and shorts from Taiwan. The first set, representative of style Nos. 2708, 4708, and 7708, consists of red, knit, 100 percent polyester shorts and a matching knit midriff top, stated to be of 60 percent cotton and 40 percent polyester. The top has thick red, white, and blue stripes, a pointed white collar, and white capping around the armholes. The red stripe is practically identical to the color of the shorts. The second set, representative of style Nos. 2709, 4709, 7709, consists of light blue, knit, 100 percent polyester shorts and a matching midriff top, also made of 60 percent cotton and 40 percent polyester. The top is white with light blue capping and shoulder straps. Pieces of overlaid light blue fabric, resembling a sail boat, have been sewn to the front with blue thread. White threads have been applied to the "sails" for decorative effect. Three rows of capping, adding necessary length, form the botton inch of the midriff top.

Each of the two sets, matched as to color and size, fall within the guidelines for classification as entireties established in J.C. Penny Purchasing Corp. v. United States, 77 Cust. Ct. 48, C.D. 4571 (1976). Assuming both pieces are imported together, each set is classifiable as a single entity.

The red set contains no features of ornamentation. However, both the white embroidery threads and the blue fabric overlays on the blue set were added primarily, if not solely, for decorative effect and constitute ornamentation within Headnote 3(a)(i)(A) and 3(a)(iii), Schedule 3, Tariff Schedules of the United States (TSUS), respectively.

059429

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

C1

The red set is classifiable under one of the provisions for other girls' knit wearing apparel, not ornamented, depending on the component material in chief value. If the set is in chief value of cotton, it is classifiable in item 382.06, TSUS, with duty at the rate of 21 percent ad valorem, or if in chief value of man-made fibers, in item 382.78, TSUS, with duty at the rate of 25 cents per pound plus 32.5 percent ad valorem. The blue set is classifiable under one of the provisions for other infants' or girls' ornamented wearing apparel, according to component material in chief value. If in chief value of cotton, it is classifiable in item 382.00, TSUS, with duty at the rate of 35 percent ad valorem, or if in chief value of man-made fibers, in item 382.04, TSUS, with duty at the rate of 42.5 percent ad valorem.

This ruling classifies some upholstery fabric, a product of Columbia.

FACTS:

The sample is a swatch of non-woven polypropylene fibers laminated to vinyl sheeting. The inquirer states that the material would be sold as yard goods with a width of approximately 60 inches. The merchandise is a product of Columbia.

LAW AND ANALYSIS:

Headnote 4(b), Schedule 3, Tariff Schedules of the United States (TSUS), provides that:

> In determining the component fibers of chief value in coated or filled, or laminated, fabrics and articles wholly or in part thereof, the coating or filling, or the nontextile laminating substances, shall be disregarded in the absence of context to the contrary.

Therefore, when the vinyl on the submitted swatch is disregarded, the swatch is in chief value of man-made fibers (polypropylene), and is subject to the provisions of Schedule 3, TSUS, which covers textile materials. The nonwoven fabric

060518

C9

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

represented by the swatch falls under the provisions in Subpart 4C, Schedule 3, TSUS, as a fabric, not specially provided for.

HOLDING:

Assuming that the product represented by the sample is imported in material lengths, it is classifiable under the provision in item 359.50, TSUS, for textile fabrics, including laminated fabrics, not specially provided for, dutiable at the rate of 25 cents per pound plus 30 percent ad valorem.

Dear

Your letter of May 4, 1979, concerns Headquarters ruling of July 17, 1978, which classified products called "Sulfopolypeptides LS/CD-CA-2" and "Base Cerique autoemulsifiante LS/CD-CA-2."

You state that the Sulfopolypeptide is not a cosmetic. If the product does not contain any benzeniod components (except for preservatives) it would be classifiable as a mixture in item 432.00, Tariff Schedules of the United States (TSUS), with the rate of duty for other nitrogenous compounds in item 425.52, TSUS, 1.5 cents per pound plus 7.5 percent ad valorem.

Base cerique autoemulsifiante LS/CD-CA-2 if not a cosmetic would also be classified as a mixture in item 432.00, TSUS, subject to the highest rate applicable to any component material. If the component sorbitan sesquioleate is derived from coconut, palm kernel or palmoid, it is dutiable in item 465.05, TSUS, at 1.5 cents per pound plus 7.5 percent ad valorem; if it is derived from another source, it is dutiable at 1.8 cents per pound plus 7.5 percent ad valorem, under item 465.10, TSUS.

Sincerely,

(Signed) James W. O'Neil

This ruling concerns the Customs classification of flame retardant rayon fabric, a product of Great Britain.

ISSUE:

The classification of the submitted sample.

FACTS:

The submitted sample consists of a woven rayon textile fabric which has been laminated to a plastic film. The plastic film contains of a thin deposit of aluminum powder held to the plastic by an adhesive.

The merchandise is in chief value of the rayon fabric and is used to make heat shields, welding curtains, and safety clothing. The plastic film does not constitute over 70 percent of the weight of the merchandise and does not weigh over 44 ounces per squard yard.

060668

THIS DOCUMENT MAY BE RELEASED TO PUBLIC

C13

LAW AND ANALYSIS:

Items 355.60 through 355.85, Tariff Schedules of the United States (TSUS), describe woven fabrics which have been coated or filled or laminated with rubber or plastics material. Those provisions cover products weighing not over 44 ounces per square yard without regard to the quantity of textile fibers present.

The instant merchandise is laminated with a plastic film. The question presented is whether that film constitutes plastics materials within the meaning of the superior heading to items 355.60, TSUS, et seq. If not, the merchandise must be considered a laminated fabric, not specially provided for in item 359.50, TSUS.

Plastic film such as that which is present on the submitted sample is itself classifiable in sheet form as a product of plastic, in item 771.42, TSUS. See C.J. Tower and Sons of Buffalo, Inc. v. United States, 62 Cust. Ct. 643, C.D. 3840 (1969). The plastic film thus constitutes plastics material, for tariff purposes. The instant merchandise falls squarely within item 355.82, TSUS. Classification in item 359.50, TSUS, is therefore, precluded.

060668

THIS [illegible] MAY BE RELEASED TO THE PUBLIC

C14

HOLDING:

The instant merchandise is classifiable under the provision for woven fabrics of textile materials, laminated with sheet plastics of man-made fibers, other, in item 355.82, TSUS, dutiable at the rate of 12.5 cents per pound plus 15 percent ad valorem.

This ruling concerns the tariff classification of certain chemicals. It is assumed they are products of a country receiving modified rates of duty.

ISSUE:

The proper classification of the products.

FACTS:

This ruling concerns the following products:

1. Polyglycidal ether of o-cresol-formaldehyde novalac. Our laboratory indicates that this product contains a benzenoid or related structure. It is apparently a plastics material.

2. Nadic anhydride. This product is apparently a derivative of maleic anhydride, which is normally produced from benzenoid sources.

3. Chlorendic anhydride. This is a cyclic organic chemical [redacted] product that has a benzenoid or related structure. [redacted]

4. 2-methylimidazole. Our laboratory indicates that this is a nitrogenous compound of the variety known as imides.

5. C-11Z Azine. This is a derivative of 2-undecylimidazole. It belongs to the imidazole group of medium temperature curing agents for epoxy resins. According to our laboratory, the product is a nitrogenous compound.

D3

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

LAW AND ANALYSIS:

Headnote 1, Part 1, Schedule 4, Tariff Schedules of the United States (TSUS), provided that, except as specifically set forth in headnote to other parts of this schedule, all products described in this part are classified in this part, even if the product is more specifically elsewhere. Part 1, Schedule 4, TSUS, embraces chemicals and chemical products having a benzenoid, quinoid, or modified benzenoid structure or being derived from substances having such structure. Other chemicals are classifiable in Part 2, Schedule 4, TSUS.

HOLDING:

Polyglycidal ether of o-cresol-formaldehyde novolac is classified under the provision for benzenoid plastics materials, in item 405.25, TSUS, dutiable at a rate of 1.4 cents per pound plus 9 percent ad valorem.

Nadic anhydride is classifiable under the provision for other products which are obtained, derived, or manufactured in whole or in part from cyclic products having a benzenoid or related structure, in item 403.80, TSUS, dutiable at a rate of 1.7 cents per pound plus 12.5 percent ad valorem.

060795

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

D4

Chlorendic anhydride is classifiable under the provision for cyclic organic chemical products having a benzenoid or related structure, in item 403.60, TSUS, dutiable at a rate of 1.7 cents per pound plus 12.5 percent ad valorem.

2-methylimidazole is classifiable under the provision for nitrogenous compounds: imides, in item 425.24, TSUS, dutiable at a rate of 5 percent ad valorem.

C-11Z is classifiable under the provision for other nitrogenous compounds, in item 425.52, TSUS, dutiable at a rate of 1.5 cents per pound plus 7.5 percent ad valorem.

Dear

This is in reference to your inquiry concerning the dutiable status of calcuim chloride solution, apparently the product of Canada.

The calcuim chloride solution is said to be the by-product of the manufacture of soda ash. The end use of the product is as a material for blending with calcuim bromide solution for use in oil wells.

The product is described as a 38.5 percent aqueous solution of calcuim chloride, with minor amounts of calcuim sulfate and calcuim bicarbonate.

Calcuim chloride of the above description is classifiable under the provision for crude calcuim chloride in item 418.16, TSUS. It is free of duty.

Sincerely,

(Signed) James W. O'Neil

NOV 13 1979

R:CV:V GE
061498

District Director of Customs
Detroit, Michigan 48226

Director, Classification and Value Division
Headquarters, Washington, D.C. 20229

Decision on Application for Further Review of Protest No. 3801-8-000552, dated December 29, 1978.

This ruling concerns the dutiability of certain mercury discharge lamps imported by a United States purchaser from a related Canadian manufacturer.

Issue:

Whether the invoice prices of the subject merchandise fairly reflect the market value of the merchandise so as to establish export value under section 402 of the Tariff Act of 1930, as amended.

Facts:

The protest under consideration involves the purchase of self-ballasted mercury discharge lamps by a United States importer from a related Canadian manufacturer. The importer, whose demand for the lamps is ten times greater than the manufacturer's domestic demand, is a single selected purchaser of the subject merchandise. There is no record of sales for export to the United States to unrelated purchasers.

In reply to a request for pricing information (Customs Form 28) from your office in 1977, protestant stated that intercompany factors were used in the production of the lamps and that the unit price to non-related purchasers (if it were to sell to non-related purchasers) would be $X for a certain model lamp and $Y for a different model. These prices are higher than the invoice prices of the subject lamps. In response to a later CF 28, dated March 3, 1978, protestant submitted conflicting information, namely, that the lamps would be priced at an amount which equals the invoice prices if sold to unrelated purchasers in the United States. The Canadian manufacturer has declined to supply current cost of production, sales, and pricing figures, asserting that such information is proprietary.

061498

D1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Law and Analysis:

This office is in agreement with your position that the invoice prices of the imported lamps are not fairly reflective of market value and that export value under section 402(b) of the Tariff Act of 1930, as amended, is therefore not the proper basis of appraisement. Since the subject lamps are not on the Final List, T.D. 54521, appraisement is to be made under the "new value law," section 402, Tariff Act of 1930, as amended.

The statutorily preferred basis of valuation is export value. In order to determine export value, one of the requirements which must be met is that the goods in question be "freely sold or, in the absence of sales, offered for sale in the principal markets of the country of exportation." The mere fact that export sales are made only to a selected purchaser does not necessarily preclude a showing that the merchandise was "freely sold" within the meaning of export value sections 402(b) and (f)(1)(B) of the Tariff Act of 1930, as amended. However, if export value is to be established, the price must be one which "fairly reflects the market value of the merchandise."

Where, as here, there are sales only to a related selected purchaser, several aspects of the transactions may be examined to determine whether the price fairly reflects market value. The position of Customs, as explained in T.D. 78-344, is that evidence including, but not limited to, circumstances of sales, relative mark-ups of the importer and exporter, and quantities and levels of trade will be accepted to prove that the sales were made at arm's length and that the relationship between the parties does not preclude a finding that the price fairly reflects market value. Customs, in acquiescence with the decision of the Court of Customs and Patent Appeals in D.H. Baldwin Co. v. United States, 65 CCPA 67, C.A.D. 1208, 577 F.2d 704 (1978), will not look to cost of production, home market sales, and third country sales for comparison purposes in determining whether a proposed export value fairly reflects market value.

In Cascade Corp. v. United States, C.A.D. 1219 (1979), the Court of Customs and Patent Appeals found that where a related purchaser had failed to set forth details of its alleged arm's length price negotiations with the exporter, the purchaser had not satisfied its burden of showing that the prices it paid were fairly reflective of market value. The court noted that the importer had not described with

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

D8

061498

specificity the factors considered in setting prices, had not established the mechanics for determining the claimed price, and had presented no evidence - apart from unsupported conclusory statements - that the prices were the result of arm's length negotiations.

In the situation at hand, protestant has not presented evidence to support its position. No information regarding the mechanics of determining prices, the circumstances of sale, or the respective mark-ups of the importer and exporter has been submitted. The manufacturer has stated that pricing is based on volume, so that gains in manufacturing efficiency are reflected in the pricing of the lamps. However, an explanation of precisely what the gains in manufacturing efficiency during the relevant time period were, and how these gains were "reflected" in the price, is entirely absent. The mere fact that the manufacturer enjoys economies of scale is not sufficient to establish that the prices fairly reflect market value.

The manufacturer has submitted a statement that all normal expenses and profit ratios have been factored in the price of the lamps. However, testimony that the manufacturer made profits or that prices were negotiated is not alone sufficient evidence of arm's length dealings, especially where, as here, the parties are closely related. Cascade Corp., supra.

Holding:

The invoice prices of the subject merchandise have not been shown to fairly reflect market value and export value has therefore not been established. Accordingly, you are directed to deny the protest in full.

Area Director of Customs
New York, New York 10048

Dear Sir:

This decision concerns a protest timely filed against your decision in the liquidation on December 15, 1978, of entry no. 217611, dated January 24, 1978, covering the importation of optical equipment from Japan exported on December 28, 1977.

ISSUES:

(1) Whether export value, section 402(b) of the Tariff Act of 1930, as amended, is the proper basis of appraising the merchandise?

(2) If export value is the proper basis of appraisement, should it be predicated on the manufacturer's prices to the exporter or on the transfer prices to the importer?

FACTS:

The importer and exporter are "related parties" within the meaning of section 402(g), Tariff Act of 1930, as amended. Neither party, however, is related to the manufacturer. The exporter or intermediary was, at the time of exportation involved herein, exclusive purchaser of such equipment in Japan at the primary level. The manufacturer also sells to secondary level distributors in Japan and to related selected purchasers in Europe. The record reveals no sales, offers, or prices of such or similar merchandise to any other purchaser for export to the United States at or about the time of exportation.

The merchandise was entered at the transfer prices, i.e., f.o.b. invoice prices, and appraised at values equal to 115 percent of such prices, on the basis of constructed value, section 402(d), Tariff Act of 1930, as amended. Protestant, through counsel, challenges both the basis of appraisement and the appraised values, claiming that the proper dutiable value for the merchandise should be at the manufacturer's prices or, alternately, at the higher transfer prices. It is claimed that sales at either level provide the proper basis for determining export value, citing United States v. Getz Bros. & Co., et al., C.A.D. 927 (1967) and United States v. Earnest Lowenstein, Inc., A.R.D. 325 (1978). As regards the appraised values, it is contended that the 15 percent advance over the entered values is erroneous in that it was not derived from the price at which such or similar merchandise was freely sold or offered for sale for export to the United States, but rather is based solely on the relationship of the parties.

061656

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

DI0

LAW AND ANALYSIS:

It is well settled that when imported merchandise is appraised on another basis of value and export value is claimed to be the proper basis, the only question open to dispute is whether the proofs establish the statutory elements of export value. Since the values arrived at by the appraising officer are presumptively correct, anyone challenging such values must prove by competant evidence facts showing the price at which the merchandise was freely sold or offered for sale in the principal markets of the country of exportation, in the usual wholesale quantities and the ordinary course of trade for exportation to the United States. The controlling language of this excerpt of section 402(b) is the term "freely sold", which is defined in section 402(f)(1) as sold or, in the absence of sales, offered (a) to all purchasers at wholesale, or (b) to one or more selected purchasers at wholesale at a price which fairly reflects the market value of the merchandise.

The first issue to be resolved is whether the manufacturer's prices provide the proper basis for determining export value in the instant case. In this regard, counsel relies on United States v. Getz Bros., et al., supra. In that case the court adopted the manufacturer's price as the "price" within the definition of export value, on the basis that the particular facts established that at the time of sale from the manufacturer to the exporters the merchandise was being freely sold for exportation to the United States.

In Getz, the record established the existence of 25 manufacturers of similar merchandise in the country of exportation at the time involved. Sales by these manufacturers provided a basis from which to determine whether the prices to the exporter reflected market value within the statutory understanding. In the present case, however, there exists only one manufacturer, one exporter and a single sale, and no evidence that this sale created a market for the merchandise in the country of exportation. Moreover, unlike the Getz situation, there is no clear showing here that, at the time of sale to the exporter, the merchandise was predestined for shipment to the United States.

In Getz, the merchandise was sold to an American importer before it was manufactured and, as it was being manufactured, it was marked with the importer's brand. These marks were made at the request of the purchaser, usually at the time the orders were placed. The marking was done by mill personnel. The exporters or trading houses had no merchandise of their own to sell. They acted merely as agents for American importers and never placed orders with the mills for the purchase of plywood until they received orders from the importers. The record further established that all of the mills sold their export plywood in its condition as manufactured and at an f.o.b. port price. This price included the cost of all containers and coverings of whatever nature and all other costs, charges, and expenses incident to placing the merchandise in condition, packed

061656

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D11

ready for shipment to the United States. Hence, there was an effective control which assured the mills that the plywood was being sold for exportation to the U.S.

Accordingly, protestant has failed to show sufficient facts to establish that a sale for export took place at the manufacturer's level.

The next issue to be determined is whether the transfer prices between the related parties can establish statutory export value. Before we can adopt these prices for purposes of determining export value, two major issues must be resolved: (1) whether the transaction constitutes a "sale" within the meaning of section 402(b); and (2), if so, whether the prices in that sale fairly reflect the market value of the merchandise as required by section 402(f)(1)(b).

In J.L. Wood v. United States, C.A.D. 1139 (1974), the Court held that for purposes of sections 402(b) and 402(f), the term "sale" should be given its ordinary meaning, namely, "transfers of property from one party to another for a consideration."

The facts here establish that the importing subsidiary is a separate and distinct corporate entity (legal person), responsible for its own profits and losses. It maintains its own offices and warehouses in the United States and performs all of its own ministerial functions independent of its parent. It employees 29 full-time personnel in the United States, and maintains bank accounts in the jurisdictions where it is authorized to do business. It determines its own marketing and purchasing policies, sales prices, and selection of customers. Approval of the actual sale in the U.S. is solely within the province of the subsidiary.

Merchandise is purchased from the exporting parent based on projected or anticipated sales in the United States. Money paid to the parent is identified with specific imported shipments, rather than on a lump sum basis. The transactions are accomplished by invoicing the merchandise exported to the subsidiary with payment back to the parent. Risk of loss passes from the parent to the subsidiary at the time the merchandise is exported, and the subsidiary is named beneficiary of the ocean insurance. Finally, we note that the entry documents designated the parent as seller and the subsidiary as purchaser.

In the absence of other material facts, we conclude, in light of J. L. Wood, supra, that the subject transaction constitutes a sale within the statutory meaning.

061657

D12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

The remaining question is whether the resulting prices fairly reflect the market value of the merchandise. T.D. 78-118, to the extent modified by T.D. 78-344, constitutes the present position of the Customs Service regarding the criteria which may be used in determining whether the price in sales to a selected purchaser fairly reflects the market value where, as here, there are sales only to a related selected purchaser. The foregoing decisions are a response to recent decisions of the Court of Customs and Patent Appeals on the matter. What is required is that the facts establish that the transactions were at arm's length and that the relationship of the parties does not preclude a finding that the price fairly reflects market value. Evidence to prove an arm's length transaction and a fair reflection of market value includes, but is not limited to, the circumstances of sales, e.g., the manner in which the prices were determined, the relative markups of the importer and exporter, quantities and levels of trade, and the presence or absence of assists, as well as other dutiable elements of value required to be considered in appraising the merchandise undergoing appraisement.

The following factors are cited as evidence that the transfer prices fairly reflect the market value of the merchandise: New prices i.e., prices for new products or price increases for established products, are initiated by the parent. The proposed prices, which are subject to negotiation, are based on the parent's cost for the product (manufacturing cost or purchase price), general expenses, and an undisclosed projected profit. Nondisclosure of the profit prevents the subsidiary from gaining an advantage in later price negotiations. The subsidiary reviews the price offer and computes its prospective resale price by adding landed duty freight factors (i.e., insurance, freight, duty, brokerage, etc.), and the usual markup for general expenses and profit. The resale price is then compared to its competitor's price. If it appears that the importer's price is not competitive, negotiations are commenced with the parent to reduce its price so as to enable the subsidiary to maintain a competitive edge in the U.S. market.

Once prices have been established, they are set forth in a published price list. All sales will conform to the price list until a new price list is generated. The ultimate price for an item will determine the volume that the subsidiary will obligate itself to purchase. The volume to be purchased is determined solely by the subsidiary. Market conditions, product costs, and potential markup will all be weighed in determining the volume of purchases. Secondly, as in any arm's-length transaction, each side weighs it costs, profits, volume and competition to maximize sales. The resulting prices, therefore, take into account most, if not all of the factors that unrelated companies include in establishing prices through bargaining.

061656

D13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

As pointed out earlier, all items are sold to the importer at a profit. The profit, as does the price for export, varies depending on the particular item sold, market conditions, competiton and volume of purchases. Counsel advises that profit on the instant transaction approximated 4 percent and is reflected in the transfer prices. While at first glance this amount would appear to be nominal in comparison to the profit on resale, market conditions in foreign markets enable the parent to recoup profits that are otherwise lost or reduced through negotiations with the subsidiary.

It should be noted at this juncture that no allegation is made by Customs that the element of profit included in the transfer price is deficient so as to provide a basis for rejecting or disregarding the transaction prices for purposes of determining statutory export value. In fact, no explanation is given for the 15 percent addition to the invoice price, whether it represents an increase in profit or the addition of some other element of value not included in that price. Recent court decisions have held that the fact of a parent and subsidiary relationship between the exporter and importer does not itself preclude a finding of export value based on the transaction price. There must be something more, that is, there must be evidence that by reason of the relationship of the parties the price does not fairly reflect the market value of the merchandise. We find no such evidence here.

Another factor leading to the determination that the prices fairly reflect market value is the quantities and levels of trade. As mentioned earlier, the parent sells similar merchandise to secondary level distributors in Japan and to related purchasers in Europe. Intermittant sales are also made to other parts of the world. The U.S. subsidiary accounts for approximately 30 percent of total sales of ophthalmic instruments. Therefore, it has significant clout in the negotiating process. By the same token, since the majority of sales are made in the home market and to third countries, it provides the parent with far greater flexibility in the negotiation process with its U.S. subsidiary. This, as we pointed out above, accounts for the parent's apparent ability to reduce its profit margin on sales to the U.S. A comparison of the profits as a whole would appear to support the conclusion that negotiations between the involved parties created a true market price.

While home market sales have been eliminated by the courts as a source of comparison for export value purposes, counsel states that prices to secondary level distributors are proportionally higher than the prices to the U.S. subsidiary. We understand that home market price lists on file with your office will confirm this particular fact. The price differential arises because the subsidiary assumes many of the expenses in the United States that the parent incurs in Japan (i.e., sales, advertising, warranty, etc.). The American subsidiary sells to wholesalers as does the parent in Japan. Likewise, the subsidiary's customers sell to end users as does the parent's customers in Japan. Thus, the subsidiary is at a lower level of distribution than its parent's customers. The proportionately lower prices to the subsidiary reflects its distribution level and additional expense burden and the resulting fact that the invoices prices fairly reflect market value. Cited in this regard is United States v. Acme Steel Company, C.A.D. 851 (1964).

061657

D14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Recent court decisions make it clear that sales prices for similar articles can be a guide to determine the validity of a related selected purchaser price. Moreover, the statutory formula itself provides for export value based on the prices at which similar merchandise is freely sold or freely offered for sale to the United States. Counsel has submitted copies of Japanese competitor's price lists and catalogs and copies of corporation price lists and catalogs of its exporting parent. Schedule C compares the parent's prices with the prices at which similar merchandise is freely sold in Japan for export to the U.S. The information relates specifically to current exportations. No such information exists for the date of exportation in question. Nevertheless, according to counsel, this information should be persuasive because the parent's prices have fluctuated steadily (taking into consideration currency fluctuation and production costs). It must be assumed that the same would hold true for the Japanese competitors. In any event, it is argued that the parent's prices have not changed to a degree so as to be disproportionate with the competitor's present day prices.

We agree with counsel that while this information does not conclusively establish export value for the instant merchandise based on sales of similar articles, it does tend to further support the claim that the invoice prices fairly reflect market value. It should be noted that the information submitted in this regard has not been challenged or otherwise refuted by the appraising officer.

In closing, we note that no explanation is given as to whether United States value could be satisfactorily determined based on the selling prices in the United States, or the basis for rejecting United States value in favor of constructed value. More importantly is the absence of a specific reason given for rejecting export value either at the manufacturer's prices or the transfer prices.

Based on the foregoing considerations, it is our opinion that the transaction prices were the result of arm's-length negotiations, as tested by the legally accepted criteria, and fairly reflected the market value of the merchandise.

HOLDING:

Export value is the proper basis of appraisement as reflected by the transfer prices to the importer.

Sincerely,

[redacted]

Harvey B. Fox
Director
Classification and Value Division

064525 LCS
064798 LCS

This ruling concerns the Customs classification of artificial/synthetic surface ice-skating rinks, suitable also for other athletic/recreational uses.

FACTS:

Two separate artificial/synthetic surface ice-skating rinks, one marketed under the trade name "NEWICE" (a product of Belgium) and the other under the registered trade name "GLICE" (a product of Canada), have been presented for classification. Both systems permit the use of traditional-type blade ice skates for figure and recreational skating and hockey.

The former consists of standard panels, each measuring 4 feet by 3 feet in surface area and consisting of a notched plywood core, approximately .75 of an inch in thickness, bonded on each face with a 11-millimeter thickness of high-density polyethylene, both of which are capable of use for skating or other uses. The notched plywood core accommodates a plastic assembly "tongue" which serves to secure the panels one to another. The complete system includes, as well as the panels and assembly "tongues," an underlayment mattress of fiber material, approximately .50 of an inch in thickness, a rubber cushioning material, steel holding guard rails with related hardware, and a liquid coating/lubricating material. In assembly, the underlayment mattress, which compensates for any unevenness of the subsurface, either indoor or outdoor, is positioned and the panels assembled by use of the tongues, the surface is then girded by the rubber cushioning and the steel holding guard rails, after which the liquid lubricant is applied.

061999

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

E2

Normal usage is stated to require reapplication of the lubricant on a 7 to 10 day cycle. However, nonreapplication at the end of a cycle enables use of the surface for nonskating athletic/recreational activities (e.g., basketball, dancing, etc.)

The entire system is assumed to be in chief value of plastics material. No breakdown by cost or value of the components was provided and no description of the constituent ingredients of the conditioner/lubricant was stated.

The latter of the two specific systems under consideration, "GLICE," consists of: 1) panels, measuring 600 by 800 (assumed to be stated in millimeters), similar to "NEWICE," compromised of a notched core (assumed to be of laminated wood) bonded on each face with a plastics material surface (both of which are capable of use for skating or other uses), 2) plastic assembly rods, 3) a resilient interpolated mattress, such as "Phaltex Isorel," measuring 1.0 to 1.5 centimeters in thickness; 4) a rigid hardwood perimeter frame; and 5) "GLICE" conditioner, a liquid lubricant to reduce friction between the surface and the skate blades.

The assembly procedure is essentially the same as for the "NEWICE" system, however, the conditioner application cycle for the "GLICE" system is stated to recur biweekly.

The entire system is stated to be in chief value of plastics materials. No breakdown by component or value was provided.

Both systems stress the energy conservation, cost (both initial and upkeep), maintenance, multiple-use, and other advantages over regular ice rink systems.

061999

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E3

ISSUE:

Whether artificial/synthetic surface ice-skating rinks are classifiable as entireties or separately by individual component; and if an entirety, whether as: 1) ice-hockey equipment; 2) other game, sport, gymnastic, athletic, or playground equipment, and parts thereof, not specially provided for; 3) according to component material in chief value; or otherwise (item Nos. 734.00 and 735.20, Tariff Schedules of the United States (TSUS), noted in particular).

LAW AND ANALYSIS:

The resolution of the issue of whether these systems constitute entireties for tariff classification purposes presupposes that the entry or withdrawal from warehouse for consumption of the merchandise which is the subject of the particular entry comprises a substantially complete unit (i.e., one complete ice-skating rink, one-complete ice-hockey rink). In such circumstances, it is well settled that the "...separate entities, which by their nature are obviously intended to be used as a unit, ... [and] to be joined together by mere assembly, and [,] in such use ... [and] joining [,] the individual identities of the separate entities are subordinated to the identity of the combined entity, ... [the doctrine of entireties applies and] duty will be imposed upon the entity they represent." Donalds Ltd., Inc. v. United States, 32 Cust. Ct. 310, C.D. 1619 (1954).

Accordingly, based on the assumption that the substantially complete entity is entered (i.e., arrives at the U.S. port in one conveyance or on the same day, if shipped in more than one conveyance) or, if not arriving as such, is withdrawn from warehouse, both for consumption, the entity (i.e., the subject system) will be treated as an entirety for tariff classification purposes.

E4

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

001999

In the absence of persuasive evidence that such complete systems are to be chiefly used (or exclusively used) as ice-hockey rinks, the available evidence indicates they are intended primarily for recreational skating and secondarily for other recreational athletic or sports activities. Therefore, complete artificial/synthetic surface ice-skating rinks, capable of and marketed for other nonskating uses, are most properly classifiable under the provision for other game, sport, gymnastic, athletic, or playground equipment, and parts thereof, not specially provided for, in item No. 735.20, TSUS, dutiable as a product of either Canada or Belgium at the reduced column 1 rate of duty of 9 percent ad valorem. C.I.E. 673/66, February 16, 1966, T.D. 56545(15), C.D. 492.23P, October 1, 1965, involving a complete indoor track system, and C.I.E. 2003/66, September 2, 1966, T.D. 66-169(36), T.C. 492.21 I, July 20, 1966, involving matting for cricket games, noted and followed.

HOLDING:

Artificial/synthetic surface ice-skating rinks, consisting of underlayment, plastic surfaced panels, assembly tongues, supporting and/or framing rails, etc., together with the surface conditioner lubricant, imported either as complete units, are classifiable, in the absence of persuasive evidence of a more-restrictive chief or exclusive use as ice-hockey rinks, under the provision for other-game, sport, gymnastic, athletic, or playground equipment, and parts thereof, not specially provided for, in item No. 735.20, TSUS.

[redacted]

Dear [redacted]

In a telephone conversation with a member of my staff on April 30, 1979, you requested information concerning the dutiable status of lithographs which you are contemplating importing from France.

Item 765.10, Tariff Schedules of the United States (TSUS), copy enclosed, provides that lithographs which are unbound and printed by hand from plates, stones, or blocks etched, drawn or engraved with hand tools may be admitted free of duty. The lithograph must also qualify as a work of art in the sense that it be a decorative, non-utilitarian article demonstrating some degree of originality or creativeness.

If the lithographs do not qualify under item 765.10, TSUS, they may be properly classifiable under items 274.50 - 274.70, TSUS, copy enclosed, and are dutiable at the column one rates of duty. Note that if the lithograph was printed more than 20 years before the date of importation, it can be entered duty free.

Also enclosed for your information is a copy of Section 10.48, Customs Regulations dealing with works of art, and the pamphlet "Know Before You Go."

063033

Sincerely,

(Signed) R. X. ARNOLD

[redacted]

Dear [redacted]

In a telephone conversation with a member of my staff on May 8, 1979, you requested information regarding the dutiable status of original oil paintings and lithographs which you plan to import from various European and Mid-East countries.

Enclosed is information regarding the requirements for paintings to be entered free of duty under item 765.03, Tariff Schedules of the United States (TSUS). Note that the work must have been done completely by hand and that there are certain limitations on the types of articles which may be classifiable under item 765.03, TSUS.

Item 765.10, TSUS, provides that lithographs which are unbound and printed by hand from plates, stones, or blocks etched, drawn, or engraved with hand tools may be entered duty free. The lithographs must also qualify as a work of art in the sense that it be a decorative, non-utilitarian article demonstrating some degree of originality or creativeness.

If the lithographs do not qualify under item 765.10, TSUS, they may be properly classifiable under items 274.50 - 274.70, TSUS, and are dutiable at the column one rates of duty unless they are a product of one of the countries specified on the enclosed list. Note that if the lithograph was printed more than twenty years before the date of importation, it may be entered duty free.

Enclosed are the provisions of the Tariff Schedules of the United States and the sections of the Customs Regulations which deal with works of art and with lithographs.

Also enclosed is information regarding the Generalized System of Preferences which, if all the requirements are met, might allow for the duty free entry of lithographs not otherwise so qualifying.

AUG 16 1979

CLA-2:R:CV:MSP
063171 M

[redacted]

Dear [redacted]

In your letter of July 6, 1979, you asked for a review of the applicability of item 806.20, Tariff Schedules of the United States (TSUS), to skis that are manufactured in the United States and exported to Canada for special silkscreen printing, and returned to the United States. This was the subject of our previous letter dated June 25, 1979, under file No. 063128.

A photograph was submitted showing both a plain, unprinted ski and a ski printed with the brandname "Krystal" and the logo "foam core." Generally, a printing operation performed abroad does not constitute a repair or alteration within the meaning of the tariff provision, but is a part of the total manufacturing process, a finishing operation, performed on the article abroad.

In this respect, on the basis of the information submitted, including the photograph, it appears that although foreign printing might not result in a major change, the printing of a brand name and a descriptive logo on the skis constitutes neither a repair nor an alteration. It is a form of advertising that designates and sets these printed skis apart from all others, thus in effect creating a new and different article of commerce, a particular brand of skis.

In these circumstances, we must remain of the opinion on further review that the described foreign printing will disqualify the skis from consideration under the alterations provision of item 806.20, TSUS, and they would be fully dutiable under the appropriate provision of the tariff schedules upon importation.

CLA-2:R:CV:MSP
063320 TMP

[redacted]

Dear [redacted]

In a telephone conversation on September 24, 1979, with a member of my staff, you requested information regarding the requirements for the duty-free entry of works of art. Enclosed are copies of section 10.48 - 10.52, Customs Regulations, which outline the requirements for the importation of works of art, and Schedule 7, Part 11, Subpart A, Tariff Schedules of the United States (TSUS), which contain the tariff provisions applicable to works of art.

Item 765.03, provides for the duty-free entry of paintings which are done completely by hand. However, if the paintings are in frames, the frames will be classified separately according to their composition and will be dutiable unless otherwise exempted.

Original sculptures of any material, as the professional productions of sculptors, may be entered as works of the free fine arts under item 765.15, (TSUS).

Original has been judicially defined to mean original in design, conception, and execution, as distinguished from the works of skilled craftmen that are representative of the decorative or industrial arts.

The creations must be the productions of professional sculptors only. A standard used in determining whether a creator of a work is a professional sculptor rather than a skilled craftsman is that he be a graduate of a course in sculpture at a recognized school of art (free fine art not industrial art), or, that he be recognized in art circles as a professional sculptor by the acceptance of his works in public exhibitions limited to the free fine arts. Thus, one who has not received the formal education may nevertheless be recognized as a professional sculptor by the merit of his publicly exhibited works.

063320

E11

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

However, each individual production, even of a recognized professional sculptor, must be of such fine quality and high artistic merit as to be recognized as examples of the free fine arts by recognized art authorities. The opinions of local art authorities may be of assistance.

The creations, whether in round or in relief, must be cut, carved, or wrought by hand or cast and the productions are limited to the first 10 castings, replicas, or reproductions.

Sculptures and statuary not covered by item 765.15, TSUS, are covered in other parts of the schedules on the basis of a variety of factors including but not limited to, their utilitarian purposes, their value, their composition, the process by which, and the place and time the articles are produced.

Item 765.25, (TSUS), provides for original works of the free fine arts not provided for in the foregoing provisions of this part, in any media, including, but not limited to, applied paper and other materials, manufactured or otherwise, such as used on collages. Although the creations may be made in any form from any materials, they must be original productions of the artists.

There is also a long standing administrative practice to distinguish between the free fine arts and the decorative or industrial arts. This distinction has been upheld by the courts which have stated that industrial or decorative artists, such as the potter, the glassmaker, the weaver, the lacemaker, the woodworker, and the jeweler all produce things which are both artistic and beautiful, but it was not the legislative intent of Congress to classify the works of those craftsmen as works of the free fine arts. While such works are quite artistic and beautiful, they are representative of the decorative and industrial arts, rather than the free fine arts.

In addition, Headnote 1(iv) to Subpart A, Part 11, Schedule 7, TSUS, copy enclosed, specifically precludes from coverage under any of the provisions therein any articles of utility. Beautiful, rare, unique and creative cigarette boxes, card boxes, clocks, picture frames, articles of jewelry and similar articles of utility are generally

063320

E12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

precluded from coverage under the provisions in Subpart A, Part 11, Schedule 7, TSUS. Normally, the determinative factor is not whether the importer intends to use the article in a utilitarian manner but whether the article can be used for a useful purpose.

Again, if the article in question does not meet all the requirements for classification under item 765.25, TSUS, or any other provision in Subpart A, Part 11, TSUS, then the article will be classified elsewhere according to the factors mentioned above regarding sculpture not classifiable under item 765.15, TSUS.

Also enclosed is Part 177, Customs Regulations, which outlines the procedures for requesting a ruling on a prospective transaction.

Sincerely,

(Signed) R. X. ARNOLD

[redacted]

Dear [redacted]

In your letter of May 23, 1980, you asked for information about the tariff status of Distearyl Pentaerythritol Diphosphite, a product identified as Weston 618, a resin plasticizer/stabilizer, which it is proposed will be exported for processing and returned to the United States.

You explained that the chemical resin product 618 would be exported and processed abroad with a polyethylene wax to improve the quality and integrity of the product. Upon return to the United States, the product will be renamed and identified as 618MT. The exported product may be classifiable under item 428.72, of the Tariff Schedules of the United States (TSUS), while the returned product might be classifiable as a chemical mixture under item 432.10, TSUS.

Generally, all merchandise imported into the United States is subject to duty on the total quantity and value unless specifically exempted. In the described transactions, there appears to be no exemption or partial exemption that might be permitted to apply from the payment of duty under the present Tariff Schedules of the United States (TSUS), when the product 618MT is imported into the United States.

Under item 806.20, TSUS, mentioned in your letter, articles exported for repairs or alterations may be returned to the United States with duty only on the value of the repairs or alterations. However, the application of this provision is precluded in circumstances where the process performed abroad would result in a new or commercially different article with new and different characteristics and uses, or where the foreign process would constitute a part of a manufacturing process begun in the United States.

From the descriptions given, it appears that the chemical process performed abroad would result in a new and different chemical product with new and different chemical properties and

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

E19

uses, resulting in a difference in the tariff classification. This kind of processing that changes the exported product to another new product goes beyond the term "alterations" for tariff purposes, and precludes the application of item 806.20, TSUS.

Sincerely,

(Signed) R. X. ARNOLD

30 JAN 1981

Gentelmen:

This is in response to your interest in the classification of a barium sulfate product of Canada. The processing is said to include mining the barium sulfate which may contain up to 50% impurities, which impurities must be washed from the ore. After crushing the impurities are separated from the barium sulfate by a combination of magnetic separation of iron compounds, flotation and vibratory separation to remove impurities of a density different from barium sulfate. The natural barium sulfate will then be wet ground to a fine particle size by the "paddlemill" method of grinding. After grinding residual impurities will be removed by the use of an acid wash. An affidavit was submitted from Chief chemist of the importing company. He described the processing of the product substantially as described above. The ore body was described as consisting of approximately equal parts of extremely pure barium sulphate interminjled with iron carbonate. It was stated that the magnetic separation and vibratory processing resulted in a barium sulfate of

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

F2

97-98% pure. Should further processing be needed, it was added, to remove any residual iron carbonate, the barium sulfate would be leached in hot hydrocholoric acid and then water washed. The barium sulfate will then be wet ground to the described particle size and then spray dried.

It is contended that the acid wash is a cleansing process designed to free the barium from impurities and is incidental to the grinding, and, as a result does not advance the product beyond the ground stage. Therefore, it is urged that the product be classified as ground barium sulfate in item 472.12 TSUS.

It is acknowledged that the acid wash does not constitute a chemical change being affected on the barium sulfate itself. As stated in the affidavit submitted, the mining, crushing, magnetic separation and the vibrating inclined separation table, are all processes which achieve a barium sulfate which is 97-98% pure. It is at this point that such barium sulfate may go through an acid wash to remove any residual iron carbonate. Thus gaining a product which may reach U.S.P. standards without further processing. It is, therefore, evident that a specific product is desired. The tariff item refers to ground barium sulfate. The chief use of ground barium sulfate, it is understood, is as a weighting agent in oil-well drilling mud. This use does not require the purity

064210

THIS DOCUMENT MAY BE RELEASED TO
PUBLIC ____

F3

of the product in question. It is noted that the ground barium sulfate also has other uses which do not demand such a high purity. Accordingly, it is concluded that ground barium sulfate contemplated by the tariff does not ordinarily undergo the chemical advancement of the product in issue.

Nor can it be concluded that the tariff item for ground barium sulfate -472.12- includes a product that has been advanced by processes in addition to grinding to such an extent that it is substantially fit for its ultimate use.

Therefore, barium sulfate which has been ground and upgraded by an acid wash as described above is classifiable under the provision for other barium compounds in item 417.80, TSUS. The rate of duty is 4.7% ad valorem.

Sincerely,

(Signed Arthur P. Schifflin

Dear

This is in reference to your inquiry concerning the dutiable status of certain mixtures used in decorative electro plating on steel articles.

A-3 solution is a mixture of E.D.T.A., sodium oxalate, caustic soda, and water. The sample is classified as a mixture in item 432.25, Tariff Schedules of the United States, TSUS, dutiable at the rate of 4.7 percent ad valorem but not less then the highest rate of applicable to any component material.

Cobalt solution is a mixture containing cobalt sulphate, E.D.T.A., caustic soda and water. This solution is also classifiable in item 432.25, TSUS.

Make-up solution is composed of potassium stannate, cobalt sulphate, E.D.T.A., caustic soda and water. This product is also classifiable in item 432.25.

Stana salt is a white powder composed of sodium stannate. This product is classifiable under the provision for other sodium compounds in item 421.62, dutiable at 4.7 percent ad valorem.

W Solution is composed of E.D.T.A., and caustic soda. This mixture is classifiable under the provision for mixtures not specially provided for in item 432.25, TSUS.

For the purposes of item 432.25 the component materials having the highest rate are sodium oxalate in item number 427.02, TSUS, dutiable at 1.2 cents per pound. Ethylene diamine tetra acetic acid is classifiable in item 425.52, TSUS, at 7.9 percent ad valorem.

Sincerely,

Dear

Your Letter of April 24, 1980, concerns the tariff status of chrome tanning salt. Chromic oxide is classifiable under the provision for other inorganic compounds in item 423.00, Tariff Schedules of the United States (TSUS). The rate of duty is 4.8 percent ad valorem. As you indicate, a product of Uruguay classifiable in item 423.00, TSUS, may be entitled to duty-free status.

Sincerely,

(Signed Arthur P. Schifflin

Internal Advice Request #44/80

This request concerns the proper method of appraisement for entries of data processing equipment manufactured and exported by the importer's overseas subsidiaries.

The involved importer processes literally thousands of entries annually resulting from the operations of its overseas subsidiaries which are situated in numerous countries. Over 50 percent of the merchandise is imported through the port of Detriot. The financial data submitted to that port enables Customs to establish constructed values for the product lines of the various subsidiaries based on the utilization of generally accepted accounting principles.

Since 1974, the importer has furnished its annual report in March of each year along with a compilation of the profit of its foreign subsidiaries to the port of Detroit where the data is carefully analyzed and the constructed values computed. This information is then forwarded to the Customs Information Exchange for circulation to the appropiate ports. The effective date of appraisement has been from April 1 to March 31. The addition for profit and research and development to the transfer prices to arrive at the appraised values is derived from financial data resulting from the importer's previous fiscal year and applied to entries as of April 1 of the following year.

While you are in substantial agreement with the above method of appraisement, it is your view that the adjustment for profit and research and development should be reflected in the cost figures for the period in which such costs are actually incurred.

065097

F1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

It is our opinion that the appraisement procedures adopted by Detroit in this case are in accordance with policy previously established by Headquarters in processing unusually large numbers of entries of multinational corporations in a similar manner where, as here, generally accepted accounting principles are utilized. See, for example, Headquarters letters R:CV::V IS 74-400231, dated October 5, 1974 and APP-6-03-0:O:D:T CW, dated March 3, 1976, copies enclosed. You will note that in such situations Customs allows for the use of the preceding calander year's cost figures in valuing the model year undergoing appraisement.

In the instant case the importer processes thousands of entries each year which must be done in accordance with statutory requirements and should Headquarters concur with your position, these entries would be subject to the withheld appraisement code for more than 1 1/4 years. However, employment of the aforementioned method, which has already been accepted by the importer and all of the involved ports would, in effect, eliminate this problem at the convenience of Customs and facilitate the work-flow while at the same time it would protect the revenue and uphold the letter and spirit of the statue. Accordingly, you are directed to adopt the same appraisement procedures.

(Signed) Irving B. Smith, Jr.

AUG 31 1983

Dear Sir:

Re: Reconsideration of Internal Advice 74/80 - Classification of Hydrogenated Pyrolysis Gasoline

The decision of March 16, 1983 (065255) stated that hydrogenated pyrolysis gasoline (HPG), a by-product of a product used as a source of benzene, was classified as a nonbenzenoid petroleum product, even though it contained about 7 percent dutiable synthetic benzenoids. The basis for that decision was that it was believed that the synthetic benzenoids produced were incidental to the main purpose of the product - i.e. - a benzene source; they were not essential to the HPG; and that there was a precedent for regarding the amount of synthetic benzenoids present as de minimis.

However, additional evidence submitted is to the effect that while benzene may be the desired product initially, the HPG cannot be regarded as an insignificant product, as it is widely used as a gasoline blending stock, and sought after for that purpose. In this connection, the ethylbenzenes produced are said to be desirable components, and once the benzene and other "crudes" are removed, the ethylbenzene in the remainder will increase, thus, enhancing its value in the desired blending stock.

Under such circumstances, it is not believed that the ethylbenzene content in the HPG in question may be considered de minimis.

Therefore, the ruling of March 16, 1983 (065255) is revoked.

The HPG described in the March 16, 1983, decision is classified as a benzenoid mixture in former item 403.90, Tariff Schedules of the United States, (now 407.16).

Sincerely,

Arthur P. Schifflin
Chief, General
Classification Branch

Dear

This is reference to your interest in the classification of several silicone products. The description and classification of these products are as follows:

Silicone Catalyst 70 A is described as an accelerator used in the manufacture of silicone release coatings on paper, film, or foil for pressure sensitive adhesives. It is a solution of nonbenzenoid nitrogenous compounds in toluene. This product is classifiable under the provision for mixtures not specially provided for, in item 432.10, Tariff Schedules of the United States (TSUS), and dutiable at the rate applicable to nitrogenous compounds in item 425.52 at 7.9 percent ad valorem.

Silicone L-EP 6481 is said to be for the addition of silicone release coatings where a modified release is necessary. It is described as a solution of alkylpolysiloxanes in xylene. The product is classifiable under the provision for mixtures not specially provided for, in item 432.10, TSUS, dutiable at the rate of 5 percent ad valorem.

Silicone L-EP 6503 is described as for solventless application to paper as a release coating. It is a thermosetting nonbenzenoid synthetic plastics material, and is classifiable under the provision for synthetic plastics materials in item 445.56, TSUS, dutiable at 1.2 cents per pound plus 9.4 percent ad valorem.

Silicone L-EP 6504 is described as an accelerator for solventless application of silicon to paper as a release coating. The product is a mixture of trimethylol propane diallyl ether monoacetate and organic sulfer compound. It is classifiable under the provision for mixtures not specially provided for, in item 432.25, TSUS, subject to the rate of duty applicable to ether-ester of a polyhydric alcohol in item 428.47, TSUS, dutiable at 12.3 percent ad valorem.

Silicone L-EP 6505 is described as used in conjunction with bulk catalyst for solventless application of silicon to paper as a release coating. It is said to be a mixture of dimethylpoly siloxanes, ethanol, trimethlamine. This product is classifiable under the provision for mixtures in item 430.20, TSUS, at 5 percent ad valorem.

F10

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC ——

Silicone L-EP 6506 described as a mixture with silicon L-EP 6503 to vary the release of obtained from pressure sensitive adhesives. This product is a mixture of hydrogen methyl polysiloxane, trimethylol propane diallyl ether monoacetate and methyl ester of rosin. This product is classifiable under the provision for mixtures not specially provided for, in item 432.25, TSUS, and subject to the rate applicable to trimethylol propane diallyl ether monacetate in item 428.47, TSUS, at 12.3 percent ad valorem.

Silicone L-EP 6510 which is described as an antifoam for fermentation of beer, pharmaceuticals and direct addition to food processing operations. The product is a mixture of dimethyl polysiloxane and a fatty ester of polyhydric alcohol. This product is classifiable under the provision for mixtures not specially provided for, in item 432.25, and subject to the rate of duty applicable to the fatty ester of a polyhydric alcohol in item 465.10, dutiable at 1.6 cents per pound plus 6.8 percent ad valorem.

Silicone Catalyst 70 B is a solution of tetrabutyldiaceoxytin oxide dimer in commercial xylene. The product is classifiable under the provision for mixtures not specially provided in item 432.10, TSUS, dutiable at 5 percent ad valorem.

09 SEP 1980

CLA-2:RRUCGC
066201 PR

Regional Commissioner
U.S. Customhouse
6 World Trade Center
New York, New York 10048

Dear Sir:

This letter concerns the tariff classification of wearing apparel sets.

After the Customs Court decision in J. C. Penney Purchasing Corp. v. United States, 77 Cust. Ct. 48, C.D. 4671 (1976), this office took the position that C.D. 4671 was not to be so liberally construed that all apparel sets would be classifiable as entireties. This position was contrary to the recommendation of the Area Director, New York Seaport. In Headquarters Ruling 059722, dated April 10, 1979, in response to a request for reconsideration by the Acting Area Director, this office thoroughly explained the judicial decisions in the area of entireties, and, while modifying the guidelines on entireties somewhat, adhered to our prior position on the application of C.D. 4671.

In a subsequent request for reconsideration of H/R 059722, file CLA-1-02,S:C:D:II-73-985, the Acting Area Director stated "We cannot accept the third criterion" because it "is completely in conflict with recent court decisions" and was taken "completely out of context." Headquarters letter of May 8, 1980, explained that Headquarters believes the paragraph in question was not taken out of context but, rather, represents a general statement of the law. Headquarters then specifically reaffirmed its holding in H/R 059722 and the principles expressed therein.

It has now come to our attention that at least some of the national import specialists in New York are choosing not to follow H/R 059722. Instead, according to information received at Headquarters, the position taken by some of the import specialists is that virtually all wearing apparel sets will be classified as entireties unless Headquarters has specifically ruled to the contrary (i.e. sweater and shirt sets, the subject of H/R 059722).

066201

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

F12

In view of the foregoing, it is requested that you direct the national import specialists to follow the principles set out in Headquarters letters of April 13, 1979, and May 8, 1980.

The area of entireties in tariff classification is recognized to be troublesome and difficult because of the subjectivity involved in determining whether a new article possesses a character or use different than any of its parts. However, if the import specialists have real problems with respect to the application to particular articles of merchandise of the principles expressed in the Headquarters letters referred to above, they may always obtain rulings from this office through the internal advice procedure.

Thank you for your cooperation in this matter.

Sincerely,

Donald Lewis
Director
Regulations and Rulings

Chief, Duty Assessment Branch 3/4
New York, New York 10042

Director, Classification and Value Division

C.I.E. Circulars 412/61, 113/66 and Headquarters Letter
TC 456.42, October 13, 1969, Folding Slippers and Case
(Your Memorandum of July 14, 1980, CLA-2-07:S:C:R:27.240)

In your memorandum you suggested that the subject former rulings are inconsistent and that a change of practice under 19 CFR 177.10(c) is in order. Our decision in this matter follows.

ISSUE:

In your memorandum you stated that slippers imported in cases or pouches for travelers are properly classifiable under the applicable provisions for footwear in Subpart A, Part 1, Schedule 7, Tariff Schedules of the United States (TSUS). However, you apparently believe that the subject rulings leave the authority for the correct classification of slippers in pouches in doubt and also leave the separate tariff treatment of the pouches they are imported in in doubt.

FACTS:

You submitted a pair of imitation leather slippers in a zippered imitation leather case as an example of the type of merchandise at issue.

LAW AND ANALYSIS:

Under the provisions for articles of leather in tariff acts of 1913, 1922 and 1930, leather pouches containing slippers were considered entireties

066364

F14

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

and classified as leather cases fitted with travel sets. Abs. 38313, 29 Treas. Dec. 216 (1915); Abs. 40096, 31 Treas. Dec. 160 (1916); Abs. 49892, 45 Treas. Dec. 635 (1925); C.I.E. 512/71.

In the present tariff schedules, the higher duty rate for certain sets in leather cases was carried over in Item 651.11, TSUS. Tariff Classification Study, C.I.E. 1/64, p. 456. However, that provision specifically covers manicure, pedicure, etc., sets, and does not cover the type of merchandise in question. In C.I.E. 119/66 we held that the new tariff schedules, in effect, accomplished a duty rate reduction for leather slippers in leather pouches by holding them classifiable under the provision for leather luggage, whether or not fitted with traveling or similar sets, in former item 706.04, TSUS. This ruling, which was not published as a Treasury Decision, is at variance with the designation of what constitutes luggage in Headnote 2(a), Subpart D, Part 1, Schedule 7, TSUS. A correct application of the cited headnote definition was made in C.I.E. 1762/64, Suppl. No. 1, in which a vinyl slipper pouch was not regarded as luggage. However, in that decision it was held that the Technical Amendments Act of 1965 amending General Headnote 6(b)(i), TSUS, broadened the concept of what was to be regarded as a container dutiable with its contents to include slipper pouches.

The legislative history, however, shows that the amendment to General Headnote 6 was intended merely to correct an error and to preserve a preexisting classification practice without change. Senate Report No. 430, 90th Cong. 1st Sess. (1967). In this connection, slipper pouches and certain other types of cases were not regarded as

066364

G1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

containers and were classified as entireties with their contents under the general principles applicable to entireties. Abs. 40096, supra; Lafayette Radio Electronics Corporation v. United States, 421 F. 2d. 751, C.A.D. 977 (1970). But there were other indications that the concept of what was to be regarded as a container was to be more liberally construed under the present tariff schedules. See, for example, Headnote 2(a)(ii), Subpart B, Part 1, Schedule 7, TSUS.

RULING:

Therefore, C.I.E. 1762/64, Suppl. No. 1, is affirmed and all footwear contained in non-leather pouches should be accorded a dutiable status which is consistent with that decision. This includes leather footwear in non-leather pouches. In this connection, C.I.E. 119/66 cannot be regarded as a classification precedent for leather footwear in non-leather pouches in view of Headnote 3(ii), Subpart B, Part 1, Schedule 7, TSUS. C.I.E. 119/66 is revoked as to footwear in leather pouches for which classification in accordance with this decision results in an equal or lower rate of duty.

As you know, the Commissioner must make a determination that an established and uniform classification practice exists before a change of practice can be proposed. Asiatic Petroleum Corp. v. United States, 449 F. 2d 1399, C.A.C.C. 1029 (1971). Since C.I.E. 119/66 was not published in accordance with the applicable regulations, it cannot serve as the basis for a finding that a uniform classification practice has been established. Accordingly, we would require further specific information concerning actual importations of footwear in leather pouches in order to determine whether a practice exists based on liquidations.

062

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

060364

Further action to revoke C.I.E. 115/66 either with or without a correlative change of practice action, will await your further response in this matter. If a uniform practice to classify footwear in leather cases under provisions requiring lower rates than those resulting from the application of the instant decision has not been established by liquidations, C.I.E. 119/66 would have to be regarded as revoked in its entirety.

(Signed Arthur P. Schifflin

[redacted]

Dear [redacted]

We have your letter of July 31, 1980, regarding the importation of gold coins.

Metal coins (including gold coins) are duty free under item 653.22, Tariff Schedules of the United States. The only question is whether the article is in fact, a coin. The general rule is whether the coin involved has been issued by a government authority for use as money. Commemorative medals which are not recognized as being used as money are not coins, even if issued by a government authority.

The Mexican 50 peso gold coin and the Krugerrand of South Africa are recognized coins and are entitled to duty free entry. We believe that the Canadian maple leafs are also duty free although our files do not show that we have ruled on them and we have no information showing their issuance as coins by the Canadian authorities.

U.S. gold medallions purchased through the Post Office would be entitled to duty free treatment under item 800.00, TSUS, as returned products of the United States. These articles are not considered to be coins as they have no use as money.

Sincerely,

(Signed Arthur P. Schifflin

[redacted]

Dear [redacted]

This is in response to your letter of September 25, 1980, concerning the tariff classification of fruit and vegetable shapes.

The fruit and vegetable shapes have hollow bodies made by sewing together the edges of cut sections of a nonwoven textiled fabric. The shapes have a cluster of leaves attached on a stem and have glued applique faces of nonwoven fabric.

The fabrics are of a needle punched nonwoven construction. While no fiber content was furnished, it appears that the article is composed of a blend of wool and rayon. Therefore, the merchandise would be classifiable as articles of nonwoven textile material dependent on the component fiber in chief value.

If the article is in chief value of wool, it would be classifiable under the provision for nonwoven fabrics, of wool, other, (category 469) in item 355.18, Tariff Schedules of the United States (TSUS), dutiable at the rate of 16 percent ad valorem.

If the article is in chief value of rayon, it would be classifiable under the provision for nonwoven fabrics, of man-made fibers, (category 669), in item 355.25, TSUS, dutiable at the rate of 12 cents per pound plus 15 percent ad valorem.

The articles may also be subject to textile restraints under the above category numbers depending upon the country of origin.

Sincerely,

[redacted] (Signed) R. F. SCHIFFLER

[redacted] Harvey B. Fox

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

JAN 13 1982

CLA-2:CO:R:CV:S
067642 TL

[redacted]

Dear [redacted]

Your June 10, 1981, letter has been referred to this office for direct reply.

In your letter you requested a determination as to the proper classification of "...high-quality, limited edition prints, individually numbered and signed, of work done by Ojibway and Cree artists ..." These were described in the following paragraph:

> The prints are produced by the Serigraph or silk screen, process, in which the screens are all hand-cut, each colour individually applied, and the entire process carried out by hand. It is not, in any sense, a lithography, or an electromechanical process.

You suggest item 765.03, Tariff Schedules of the United States, (TSUS). Item 765.10, TSUS, was also suggested as the correct provision under which to classify these prints.

From the documentation submitted with this request it appears that several questions are presented:

1. Are these prints made with the use of a stencil.

2. Are these precluded from classification as works of art by the fact that they are made by a silk screen process.

Item 765.03, TSUS, is a provision for:

> Paintings, pastels, drawings, and sketches, all the foregoing, whether or not originals, executed wholly by hand....

Item 765.10, TSUS, is a provision for:

> Engravings, etchings, lithographs, woodcuts, and other prints, all the foregoing, unbound, and printed by hand from plates, stones, or blocks etched, drawn, or engraved with hand tools....

067642

G6

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Both 765.03, TSUS, and 765.10, TSUS, occur in Subpart A, Part 11, Schedule 7, TSUS. Each has to comply with the headnotes to Subpart A. Headnote 1(iii) precludes the classification of "articles made in any part by stencilling or by photochemical or other mechanical processes;".

The facts presented by your letter do not address the first question. However, it the prints are stencilled, Headnote 1(iii) precludes them for classification under items 765.03 and 765.10, TSUS.

The facts revealed by your letter are sketchy. However, it appears that merely because the prints are made by a so-called "silk screen" does not preclude them from classification under either item 765.03 or 765.10, TSUS, if the prints are made wholly by the hand transfer process used in serigraphy. You should be aware of the fact that the requirements of the language in these two provisions and section 10.48, Customs Regulations, must be met for duty-free entry.

Sincerely,

[Signed) R. X. ARNOLD

068247 JH

Dear

This is in response to your letter of February 17, 1981, concerning the tariff classification of TERIC 12A3, a component of your product leather lube.

The sample was described as a polyethoxylated lauryl alcohol. Accordingly, leather lube which contains TERIC 12A3 containing the above chemical is classifiable as a mixture in item 432.25, TSUS. The rate of duty is 4.7% ad valorem.

Sincerely,

(signed) A. P. Schifflin

Classification Branch

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

G8

12 NOV 1981

CLA-2 CO:R:CV:G
068628 c

This ruling concerns the tariff classification of certain footwear manufactured in Korea.

FACTS:

The samples submitted are women's slip-on casuals with flat plastic outsoles and jute wrapped plastic platforms. Sample No. F05506 has a closed toe, closed heel, espadrille style upper. Sample No. F05507 has an open toe, open heel upper which consists of three strips which come together at the top. The uppers of both samples are made from "Echelon 734" which consists of a woven nylon fabric to which ~~fabric~~ plastic dots measuring approximately 1/32 inch in diameter have been applied. These plastic dots are not connected to each other. The upper material has thin strips of plastic capping around the edges.

The inquirer maintains that the sample shoes are classifiable under the provision for other footwear which is over 50 percent by weight of fibers and rubber or plastics with at least 10 percent by weight being rubber or plastics and having uppers of which over 90 percent of the exterior surface area is rubber or plastics in item 700.56, Tariff Schedules of the United States (TSUS), and dutiable at the rate of 6 percent ad valorem.

068628

ISSUE:

Whether the exterior surface area of the shoe uppers is over 90 percent plastic.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

69

LAW AND ANALYSIS:

Schedule 7, Part 1, Subpart A, Headnote 3, TSUS, provides that:

> For the purpose of items 700.51 through 700.56, the rubber or plastics forming the exterior surface area specified, if supported by fabric or other material, must coat or fill the supporting material with a quantity of rubber or plastics sufficient to visibly and significantly affect the surface otherwise then by change in color, whether or not the color has been changed thereby.

Schedule 3, Part 4, Subpart C, Headnote 2(a), TSUS, provides that:

> For the purposes of the tariff schedules - the term 'coated or filled' as used with reference to textile fabrics and other textile articles, means that any such fabric or other article has been coated or filled (whether or not impregnated) with gums, starches, pastes, clays, plastics materials, rubber, flock, or other substances, so as to visibly and significantly affect the surface or surfaces thereof otherwise then by color, whether or not the color has been changed thereby.

The inquirer claims that pursuant to the Schedule 7, Part 1, Subpart A, Headnote 3, TSUS, supra, the plastic dots visibly and significantly affect the surface of the textile material. Specifically, he notes that a mere visual examination of the sample uppers demonstrates that the coating visibly affects the surface of the upper material. In addition, he states that the coating significantly affects the surface area otherwise than by a change in color. As evidence of the validity of this statement, the inquirer has enclosed a laboratory test report issued by the Shoe and Allied Trade Research Organization which indicates that the coating substantially increases the strength of the upper material.

068628

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ——

G10

The inquirer has cited the case of Bruce Duncan Co. v. United States, 80 Cust. Ct. 48, C.D. 4736 (1978), as authority for his claim that the shoe uppers are of plastic. In this case the court held that certain material invoiced as fusible interlining cloth having 35,000 points or dots per square foot falls within the term coated fabrics as set forth in Schedule 3, Part 4, Subpart C, Headnote 2(a), TSUS, supra. The court in arriving at its conclusion rejected the Government's claim that the term "coated fabric" requires a continuous uninterrupted layer of coated material.

The inquirer also cites HRL 059184 dated August 22, 1979, as authority for his position. That ruling follows Bruce Duncan in that woven twill fabric with dots of non-transparent resinous plastic applied in a repeat pattern was found to be coated fabric. In reaching its decision this office stated that "Because of the special characteristic imparted to the fabric by the large quantity of plastic applied to this material, and the close proximity of the dots, the fiber is regarded as being visibly and significantly coated."

We agree with the inquirer that the dots not only produced a visible effect on the textile surface on which they are applied but they also strengthen that textile in the manner described in the laboratory report.

068628

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

G11

However, it is our view that the result reached in the Duncan case does not compel the conclusion that over 90 percent of the exterior surface area of the shoe uppers involved is plastic. It should be noted that the classification of shoes under the tariff provisions covering rubber footwear is determined strictly by the relative weights of the shoe components and the relative surface areas of the various materials comprising the exterior surface area of the uppers. It should be noted that Schedule 7, Part 1, Subpart A, Headnote 3, TSUS, states that it is "for the purposes of items 700.51 through 700.56 ***" and not that it is for the purposes of determining whether or not textile forming the upper is considered a 'coated fabric'. This headnote is concerned about one plastic exterior surface, which is supported by a textile or other material, not a group of unconnected surfaces (the dots). On the other hand Schedule 3, Part 4, Subpart C, Headnote 2(a), TSUS, concerns textile fabrics and articles which are coated.

In conclusion, it is our view that the Duncan ruling is inapplicable in this instance. The language of item 700.56, TSUS, requires a precise measurement of the surface area of each component material comprising the uppers of the footwear. Specifically, the non-plastic areas between the plastic dots must be measured and compared with the area covered by the plastic dots in order to determine whether plastic covers over 90 percent of the exterior surface area of the uppers.

068628

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

612

The exterior surface area of the uppers in the sample shoes is not over 90 percent plastics. Consequently, they do not qualify for classification under item 700.50.

HOLDING:

Sample shoes, Nos. F05506 and F05507, are classifiable under the provision for footwear of the slip-on type, that is held to the foot without the use of laces or buckles or other fasteners in item 700.59, TSUS, and dutiable at the rate of 37.5 percent ad valorem.

The tariff classification set forth above is not affected by the country of origin of the shoes. Necessarily, the rate of duty would be higher if the shoes originated in one of the communist countries listed in General Headnote 3(f), TSUS.

District Director of Customs
Seattle, Washington 98714

Dear Sir:

Re: This Ruling Concerns an Application for Further Review of Protest No. 3004-0-000126, Filed on Behalf of the Importer of Certain Plastic Fish Boxes or Containers from Canada

FACTS:

These boxes or containers come in a variety of colors and are made of high density polyethylene, and are used in the fishing industry. Aboard commercial fishing vessels they are used to store freshly caught fish, crabs, eels, etc. and to protect them from crushing, rough handling etc. They have non-skid runners to permit stacking above decks as a space-saving measure. They also allow excess water to drain off. In port, the fish are weighed in these containers, auctioned off to wholesalers and transported in them to the canneries to be processed.

ISSUE:

Are the fish boxes or containers of the class or kind of merchandise chiefly used for the packing, transporting, or marketing of merchandise, and classifiable in item 772.20, Tariff Schedules of the United States (TSUS)?

LAW AND ANALYSIS:

Item 772.20, TSUS, is a chief use provision. In accordance with General Interpretative Rule 10(e)(i), TSUS, a tariff classification controlled by use is determined in accordance with the use in the United States at, or

068672

A3

immediately prior to the date of importation, of articles of that class or kind to which the imported articles belong, and the controlling use is the chief use, i.e., the use which exceeds all other uses (if any) combined. While these containers are undoubtedly used to package and transport newly caught fish, they are used in large part to store these fish on board during long periods after they are caught and while they move from place to place on the docks and to the canneries. Moreover, these containers are similar in many respects to those used for storing parts in factories for ease of accessibility and various other in-plant storage/handling operations. Consequently, evidence is lacking that the subject fish boxes or containers belong to that class or kind of merchandise chiefly used for the packing, transporting, or marketing of merchandise.

HOLDING:

The fish boxes or containers are classifiable under the tariff provision for articles, not specially provided for, of rubber or plastics, in item 774.55, TSUS, dutiable at the rate of 7.7 percent ad valorem.

You should deny the protest. Protestant should be furnished a copy of this decision. Your file is returned.

(Signed Arthur P. Schifflin

Dear

This is in reference to your letter concerning Headquarters decision of May 4, 1981, (065892) concerning the tariff classification of off-grade methanol.

The methanol was described as a component of dimethyl terephalate which is used in the production of polyester yarn, with the methanol being reused. As a result the methanol used was not considered a waste but was classifiable as methanol in item 427.97, Tariff Schedules of the United States (TSUS).

It is now asserted that the methanol is purified before being reused. A flow chart was submitted, and it was stated that the impure methanol, containing 95 percent methanol, 4 to 5 percent water, 0 to 1 percent ethylene glycol, is recovered from the polymerization step; that the impure methanol cannot be used for its original purposes without first purification prior to recycling and use in the esterification process. Therefore, because of the need for such purification, the product is felt to be a waste.

The question is whether methanol of 95 percent purity, which cannot be used again in a particular application without purification, is classifiable as a waste.

A tariff definition of waste is a material which has become useless for the original purposes for which it was designed, and is fit only for remanufacture into something else.

Generally, a chemical of 95 percent purity is considered a commercial grade of the chemical, with possibly various other technical grades existing of varying purities. While methanol of 95 percent purity may require purification for this particular application, there is no indication that such methanol would not be suitable for other uses. It is understood, for instance, that methanol of 95 percent purity is used as a solvent in windshield cleaners and anti-freeze preparations.

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

AS

Therefore, methanol of 95 percent purity cannot be considered a waste for tariff purposes, suitable only for remanufacture into something else, but rather is classifiable as methanol in item 427.97, TSUS.

Sincerely,

(Signed Arthur P. Schifflin

Arthur P. Schifflin

09 SEP 1981

CLA-2 CO:R:CV:G
068850 JH

Dear

We have reviewed our decision on the tariff classification of antimony trioxide coated with dioctylphthalate on the basis of your Aide Memoire.

Antimony trioxide is classified as an inorganic compound in item 417.50, Tariff Schedules of the United States (TSUS). Dioctylphthalate is classifiable as a benzenoid plasticizer in item 409.34. As a result the antimony trioxide coated with the plasticizer was deemed an advanced product and therefore classified as a mixture in part of a benzenoid chemical in item 413.51, TSUS.

You state that the antimony trioxide is used as a fire retardant component in synthetic resins and, because it is very dusty, it is coated with the benzenoid plasticizer, which represents 2 to 3 percent of the total weight. You add that the plasticizer is required to be used by certain regulations of the Environmental Protection Agency (EPA), but that it does not alter the physical properties of the antimony trioxide, so that you feel that the addition of the plasticizer to the antimony trioxide does not represent a processing beyond the usual commercial product.

Generally speaking, chemicals classifiable in Part 2 of the chemical schedule represent chemicals, inorganic or organic, in elemental, mixture or compound state, and are not therefore considered advanced or finished chemical products, which may have solvents, plasticizers, and/or other components added. One exception to this may be the chemical compound which has a small amount of a benzenoid chemical added which does not play a part in the ultimate function of the compound. If the benzenoid plasticizer's sole function is the reduction of dust in the area where the antimony trioxide was used, the plasticzier in small amounts may be ignored in the classification of the compound. In our original decision it was our understanding that in addition to the reducing the amount of dust present, the plasticizer when used in stated concentrations acted

A1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

as a dispersant for the antimony trioxide powder in the manufacturing process, that the plasticizer aided in the thorough distribution of the powder throughout the final product, thus maximizing its fire retardant effect.

However, we have again researched the literature and checked with industry sources on this point and conclude that the chief use of the benzenoid chemical of the type and amount in question is as a dust suppressant, and any other plasticizer function is minimal. Accordingly, for classification purposes, the benzenoid plasticizer, in the concentration listed, is de minimis. Therefore, antimony trioxide as described is classifiable in Item 417.50, TSUS.

The decision of November 20, 1981, (060570) is hereby revoked.

Sincerely,

(Signed) K. P. SCHIFFLIN

[redacted]

Dear [redacted]

This is in reply to your letter of July 15, 1981, on behalf of [redacted] concerning the tariff status of "Turnout Clothing." The subject merchandise is worn for protection by firefighters.

The coat and pants are composed of three separate layers of fabric. These layers do not appear to be laminated together and for the purposes of this ruling we assume that they are not. Style No. 110 uses a Nomex III outer shell which has neoprene on its inside surface, a Kevlar needle-punched thermal insulation interlining which has neoprene on its outer surface, and a Nomex woven fabric lining. Style No. 115 utilizes an outer shell of woven filament Aramid Nomex which has neoprene on the inside surface, a Kevlar needle-punched thermal insulation interlining with neoprene on its outer surface, and a woven fabric Nomex liner. Nomex is said to be fire, acid, and chemical resistant, while Kevlar has the same properties as well as better tear, cut, and abrasion resistant.

The clothing is designed to protect the wearer from external heat sources and is said to offer the advantages of light weight, high heat tolerance, flame and chemical resistance, and the inability to absorb water. It is stated that the clothing is designed for firefighters and that it will be sold to the fire departments of various cities and municipalities, the armed forces, and possibly to industrial companies.

You inquire as to whether clothing made for use by professional firefighters is entitled to free entry under the provisions of item 853.10 Tariff Schedules of the United States (TSUS). This statute covers life saving apparatus imported for the use of an institution established to encourage the saving of human life. Importations by a fire department would not qualify for free entry because its primary purpose is to put out fires and not to save lives. However, a rescue squad or other special unit within the fire department, if established primarily to save human lives, may qualify and obtain free entry if the importation is for its exclusive use in life saving.

A9

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

068879

If the subject garments do not qualify for entry under item 853.10, TSUS, they would be classifiable, if in chief value of the Kevlar needle-punched thermal insulation interlining, under the provision for articles not specially provided for, of nonwoven fabric, of man-made fibers, in item 355.25, TSUS, with duty at the rate of 12 cents per pound plus 15 percent ad valorem, or, if in chief value of the woven outer shell and lining materials, under the provision for other textile articles not specially provided for, of man-made fibers, in item 389.62, TSUS, with duty at the rate of 25 cents per pound plus 15 percent ad valorem.

Sincerely,

(Signed) Arthur P. Schifflin

20 NOV 1981

CLA-2 CO:R:C:G
088950 PR

This ruling concerns the tariff classification of certain bookcloth material manufactured in Holland.

FACTS:

Several swatches of material were submitted for our examination. The samples all are plain woven textile fabrics which have been laminated with a paper backing. The inquirer states that the cloth is partly coated or filled with an acrylic-starch resin. Each of the samples has a paper backing which appears to have been applied to the fabric with an adhesive. The fabric in four samples is wholly of cotton, three samples have rayon fabrics, and two samples have blended fiber fabrics which consist of linen, rayon, and cotton in various percentages. The merchandise is imported in rolls of approximately 110 yards long and is used for bookcovers or binding. The inquirer indicates that the paper is used to prevent the glue in the paste-making machine from bleeding through or penetrating the cloth.

ISSUE:

The issue presented is the proper tariff classification of the subject merchandise.

LAW AND ANALYSIS:

The inquirer believes that the subject merchandise should be classified either as a coated or filled fabric, either in items 355.60-.65, Tariff Schedules of the United States (TSUS), or in items 350.20-.45, TSUS. As an alternative, classification under the provision for reinforced paper in item 253.35, TSUS, is suggested.

All

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

068952

The merchandise is not classifiable as a coated or filled fabric because it has paper laminated to one side of it. Articles which, in fact, constitute more than other articles are not classifiable under the provisions applicable to those other articles. Mellon Bearings Inc. v. United States, 52 CCPA 61, C.A.D. 1240 (1965).

Merchandise as represented by the submitted samples is also not classifiable as reinforced paper because, in this instance, the paper is the reinforcing agent and not the medium being reinforced. See U. S. Jarnes & Co. v. United States, 52 Cust. Ct. 165 at pg. 162, C.D. 2464 (1964).

Accordingly, since the subject merchandise has been laminated with paper and is not specifically provided for in any other provision in the tariff schedules, that merchandise is classifiable under the provisions for other textile fabrics, including laminated fabrics, not specially provided for, in item 359.10-60, TSUS. The classification of the individual fabrics to be imported depends on the component fibers of chief value in those fabrics. If the fabrics are in chief value of cotton, the merchandise is classifiable in item 359.10, TSUS, with duty at the rate of 15 percent ad valorem; if the merchandise is in chief value of linen, it is classifiable in item 359.20, TSUS, with duty at the rate of 6.5 percent ad valorem; and, if in chief value of rayon, the merchandise is classifiable in item 359.50, TSUS, with duty at the rate of 25 cents per pound plus 30 percent ad valorem. An articles is in chief value of material if such material exceeds in value each other single component material of the article.

Acting Commissioner of Customs
THRU: Assistant Commissioner (Commercial Operations)

Director, Classification and Value Division

Interpretation of Court Decision Concerning the Classification of Coated or Filled Fabrics

Headnote 2(c), Subpart 4C, Schedule 3, Tariff Schedules of the United States (TSUS), requires that for a fabric to be coated or filled for tariff purposes, the coating or filling material must visibly and significantly affect the surface or surfaces of the fabric otherwise than by a change in color. On September 27, 1978, the Customs Court in C.D. 4769 determined that a fabric which had the appearance of stiffness was coated or filled within the purview of Headnote 2(a). This was affirmed by the Court of Customs and Patent Appeals on November 15, 1979, in C.A.D. 1236.

In order to carry out what we believe was the intent of Congress when Headnote 2(a) was enacted, and to comply with the holding of the Court in C.D. 4769, we have prepared an interpretive T.D. for your signature, to be published in the Customs Bulletin. The proposed T.D. notifies the public that Customs is strictly interpreting the court case. It will also make things somewhat easier for our import specialists to determine when fabrics are coated or filled for tariff purposes.

DEPARTMENT OF THE TREASURY U.S. CUSTOMS SERVICE CORRESPONDENCE APPROVAL AND CLEARANCE Form 101 (1-1-73)

(T.D. 81-)

This notice interprets the decision in C.D. 4769, decided September 27, 1978, affirmed by C.A.D. 1236, decided November 15, 1979, which held that certain fabric was coated or filled for the purposes of Headnote 2(a), Subpart 4C, Schedule 3, TSUS.

DEPARTMENT OF THE TREASURY,
OFFICE OF THE COMMISSIONER OF CUSTOMS
WASHINGTON, D.C., AUGUST , 1981

In H. Rosenthal Co. v. United States, C.D. 4769, decided September 27, 1978, the United States Customs Court held that the fabric from which certain coats were constructed fell within the definition of "coated or filled", in Headnote 2(a), Subpart 4C, Schedule 3, Tariff Schedules of the United States (TSUS). That definition requires that for a fabric to be coated or filled for tariff purposes, the coating or filling must visibly and significantly affect the surface or surfaces thereof, otherwise than by a change in color.

The Customs Court held that it is the effect imparted by the coating material, and not the material itself, that must be visible. The Court went on to observe that the fabric before it had the "appearance of stiffness" and concluded, apparently on the basis of that stiffness, the fabric "is coated within the purview of the controlling headnote."

The appellate decision by the Court of Customs and Patent Appeals did not discuss this area except to note that the Customs Court "found the fabric surface to have been visibly affected by the coating."

Stiffness is normally the quality of rigidity which is attributable to an article or fabric. It is not a term which has a clear meaning when used in a description of the surface of that article or fabric. The absence of a specific explanation by the Customs Court in Rosenthal of how the surface or surfaces of the fabric in question were visibly

068962

A14

PUBLIC

affected by the added plastics material is causing confusion and a lack of uniformity in the classification of coated or filled fabrics. For this reason, Customs is issuing this interpretation of the decision in Rosenthal.

Considering the holding in Rosenthal and the stated basis for that holding, Customs will consider the surface of a fabric to be visibly affected by a coating or filling if (1) the coating or filling material can be separately distinguished from the fabric by the naked eye; (2) the coating or filling material imparts a shine, luster or glossy appearance, or a dull appearance, that is noticeable by a casual examination; or (3) the coating or filling material has caused the fabric to have a pronounced (obvious) appearance of stiffness. In regard to the appearance of stiffness, the fabric should appear significantly more rigid than that fabric would be if not coated or filled.

All prior rulings by the Customs Service which are in conflict with the preceding paragraph are, pursuant to the authority in section 177.9(d), Customs Regulations (19 CFR 177.9(d)), hereby revoked.

Dear

Your letter of August 31, 1981, concerns the classification of antimony trioxide coated with dioctyl phthalate.

We have recently reviewed our decision that antimony oxide coated with a benzenoid plasticizer of not over 3.0 percent by weight, is classifiable as a benzenoid mixture in item 413.51, Tariff Schedules of the United States (TSUS). That decision was based on information that benzenoid wetting agent assisted in the distribution of the powder throughout the final product, and thus would be considered essential to the finishing of the desired product. Subsequently, additional technical information was submitted, which, together with the additional data received from industry sources, established that the chief use of the benzenoid plasticizer or wetting agent in this instance, in the amount stated, was a dust suppressant, and any other plasticizer function was minimal.

Accordingly, for classification purposes, the benzenoid component in the percentage listed is considered de minimis, and the antimony trioxide is, in fact, classified in item 417.50, TSUS.

Sincerely,

Philip L. Robins

Dear Sir:

Re: Request for Internal Advice 121/81

The initiator of this request seeks the proper classification of a "radioimmunoassay kit" used to detect Hepatitis Virus B antigen in the human body. The presence of certain antigens on the surface of the liver indicates the presence of hepatitis Virus B, the causal agent of the disease. Blood transfusions are a common source for the disease, so a routine screening of all blood products substantially diminishes the prevalence of the disease. See The Merck Manual of Diagnosis and Therapy (Rahway, New Jersey: 1977).

The 100 test version of the kit contains two vials each containing chimpanzee antibodies that specifically react with Hepatitis B Surface antigen. The antibodies are rendered radioactive by iodination, described below. The kit also contains 100 polystyrene tubes coated with guinea pig antibodies that also specifically react with Hepatitis B surface antigen; a negative control, recalcified human plasma that is negative for the B antigen; a positive control, human plasma that is positive for the B antigen; and 10 grams of sodium chloride that is used for washing the immune complex created by the test reaction. The chimpanzee antibody and the two controls are buffered with bovine serum and contain small amounts of a chemical preservative.

The test begins by incubating one of the coated tubes in which a sample of the patient's serum or plasma has been added. If antigen is present in the patient's sample, then it forms an immune complex with the antibody coated on the tube. The sample is then washed with the sodium chloride to remove excess antigen. The antibody derived from chimpanzees is then added. This antibody forms a "sandwich" with the guinea pig when they surround the antigen present in the patient's sample. Excess antigen is then again removed by washing.

The radioactivity of the chimpanzee antibodies is achieved by attaching radioactive iodine atoms to the gamma globulin. The radioactivity is emitted during the creation of the immune complex, and the strength of emission is compared to the standards to determine the amount of antigen present in a patient's sample. This "trace" technique is not the only method of internal measurement - e.g., enzymes could be used - but it is a superior method. McGraw-Hill Dictionary of Science and Technology, "Radioimmunoassay."

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

LAW AND ANALYSIS:

1. If imported together, two or more articles are classified as an entirety, rather than separately, if they are joined or used together to form a new article which has a character or use different from that of any of the components or in which one of the components is predominant. J. C. Penney Purchasing Corp. v. United States, 77 Cust. Ct 48, 54, C.A.D. 4671 (1976). Given the variety and complexity of products imported into the United States, it is not surprising that the doctrine of entireties has been variously expressed, sometimes obscurely, so that is seems a if there were several doctrines. The difficulty in the present case is aptly described by Minature Fashions, Inc. v. United States, 54 CCPA 11, 15, C.A.D. 894 (1966): "Where, however, the several components of a unit are to any extent alone susceptible of a separate use, the question of whether their individual identities are subordinated to the newly created entity is not so readily answered." We think that this more accurately states the case here than the initiator's contention that none of the components of the kit has a useful function as a separate entity. For example, the antibodies retain a separate identity in that they could be used with other, non-kit materials for the same kind of test or for different tests. The components are not limited by the manufacturing process to use with each other.

So the precise question is whether the components of the kit, which are susceptible to separate uses, nevertheless create an entirety because they are subordinated to the identity of the kit. The kit is designed as a commercial unit in two senses: first, the doses of the antibodies and the standards are matched in a limited number so that the kit can be used for a known number of tests; second, the kit includes all the major elements needed to carry out the test. The commercial identity of the kit satisfies scientific need: because the essence of a radioimmunoassay is the comparison of a standard with an unknown concentration of antigen, the inclusion of the standard and the radioactive tracer, a technique of internal measurement, creates a product that can accomplish the scientific result, which each component imported separately cannot accomplish. In their condition as imported, the kits are not merely a collection of substances imported together for convenience, but a new commercial entity. In sum, function, use, and design of the kits show that the various components are subordinated to the commercial unit or "newly created identity" of the kits themselves and that they are therefore properly considered entireties for tariff purposes. Donalds Ltd., Inc. v. United States, Cust. Ct. 310, C.D. 1619 (1954).

2. The initiator argues that the radioimmunoassay kits are properly classified under the provision for "Viruses, therapeutic serums, vaccines, toxins, antitoxins, and analogous biological products... "in item 437.75, TSUS, with a free rate of duty. The legislative history is critical to the

069234

B4

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

understanding of item 437.76, TSUS. The Tariff Classification Study, Schedule 4, Part 6, p. 86 states that 437.76, TSUS, covers a group of "related articles which substantially correspond with the scope of the licensing requirements of the Public Health Service and the Department of Agriculture applicable to the importation of certain biological products." These requirements are set forth in 42 CFR § 73.1 (1960):

> (q) "Biologic product" means any virus, therapeutic serum, toxin, antitoxin, or analogous product applicable to the prevention, treatment or cure of diseases or injuries of man:
>
> (1) A virus is a product containing the minute living cause of an infectious disease.
>
> (2) A therapeutic serum is the product obtained from the blood of an animal by removing the clot or clot components and the blood cells and intended for administration by a route other than ingestion.
>
> (3) A toxin is a product containing a soluble substance poisonous to laboratory animals or to man in doses of 1 milliliter or less (or equivalent in weight) of the product, and having the property, following the injection of non-fatal doses into an animal, of causing to be produced therein another soluble substance which specifically neutralizes the poisonous substance and which is demonstrable in the serum of the animal thus immunized.
>
> (4) An antitoxin is a product containing the soluble substance in serum or other body fluid of an immunized animal which specially neutralizes the toxin against which the animal is immune.
>
> (5) A product is analogous:
>
> (i) To a virus if prepared from or with a virus or agent actually or potentially infectious, without regard to the degree of virulence or toxicogenicity of the specific strain used.

069234

B5

RELEASED TO THE

(ii) To a therapeutic serum, if composed of whole blood or plasma or containing some organic constituent or product other than a hormone or an amino acid, derived from whole blood, plasma, or serum and intended for administration by a route other than ingestion.

(iii) To a toxin or antitoxin, if intended irrespective of its source of origin, for the prevention, treatment, or cure of diseases or injuries of man through specific immunization.

(i) "Products" includes biologic products and trivalent organic arsenicals. A product is deemed "applicable to the prevention, treatment or cure of diseases or injuries of man" irrespective of the mode of adminstration or application recommended, including use when intended, through administration or application to a person, as an aid in diagnosis or in evaluating the degree of susceptibility or immunity possessed by a person, and including also any other use for purpose of diagnosis if the diagnostic substance so used is prepared from with the aid of a biologic product.

In Certified Blood Donor Services, Inc. v. United States, 62 CCPA 66, C.A.D. 1147 (1975), the Court of Customs and Patent Appeals classified rabbit serum that contained antibodies specific to certain antigens contained in the immunoglobulin (a protein) of a patient's blood sample. The rabbit serums were imported in vials. The court, held that:

> The imported serums are "obtained from the blood of an animal by removing... the blood cells," they contain "the soluble substance... which specifically neutralizes the toxin against which the animal is immune," and they are "applicable to the prevention, treatment or cure of diseases or injuries of man" because they are used "for purposes of diagnosis." Hence, the instant diagnostic serums are analogous biologic products...

This holding is somewhat confusing because the court conflated the definitions for therapeutic serums and antioxins, but one can infer that the serums were held to be analogous to antitoxins.

069334

B6

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

But our National Import Specialist office in New York argues that because the radioimmunoassy kits contain nonbiological components, then the kits are "more than" biological products. That office identifies the test tubes and the sodium chloride as the critical nonbiological components. It could also be argued that the iodinated antibody in the kits adds a second function to the kits, creating a "dual primary function," under the "more than" doctrine. See Pollard Bearing Corp. v. United States, 62 CCPA 61, C.A.D. 1146 (1975). A product possessing a "dual primary function" cannot be classified under a provision that describes only one of the functions; the product is then "more than" the product described by the provision.

Both arguments implicitly assume that the provision in item 437.76, TSUS, requires that the merchandise it covers consist wholly of biological products, except, perhaps, for de minimis amounts of nonbiological substances. But even if this interpretation were valid, the inclusion of the test-tubes in the kit would not preclude classification in 437.76, TSUS. The test-tubes are merely usual and ordinary containers, not separately classifiable, but dutiable as part of their contents, within the meaning of General Headnote 6(b), TSUS. Note also that the rabbit serum in Certified Blood Donors was imported in vials, which did not preclude classification in 437.76, TSUS.

More fundamentally, the legislative history shows that 437.76, TSUS, does not require a product to consist wholly of biological substances. For, as we have seen, the Public Health Service Regulations define "products" a diagnostic substances "prepared from or with the aid of a biological product." 42 CFR 73.1(g)(5)(i)). The language plainly implies that a biologic product can include more than biological substances if the resulting product is "applicable to the prevention, treatment or cure of diseases or injuries of man." By the logic of the doctrine of entireties, the product in question is not an aggregate of various components, but a unified product - a radioimmunoassay kit - that must be considered as such. The collectivity is "prepared from or with the aid of" biological substances that carry out the stipulated use by means of the substances set out in 42 CFR 73.1. Item 437.76, TSUS, is virtually a use provision, or at least eo nomine provision in which the use of the product is critical in circumscribing the covered class of products. See United States v. Quon Quon, 46 CCPA 70, C.A.D. 699 (1959). The limitation on the composition of the kit is contained in the definition in 42 CFR 73.1; additional substances should not change a kit's classification if they simply contribute to the required use carried out by a particular defined biological substance.

069234

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

The breadth of coverage created by the legislative history also shows why the iodinated antibody does not create a second function within the meaning of the "more than" doctrine. Even if the conventional application of the doctrine implies that the kit has a "dual primary function, the breadth of the legislative history negates the application. For the radioactive function - an internal measurement system critical to the kit's identity as an entirety - merely augments the function required for classification in 437.76, TSUS:"... the prevention, treatment or cure of diseases or injuries of man." The iodinated antibody serves this function, and no other, so the "more than" doctrine is inapplicable.

Pharmacia Laboratories Inc. v. United States, 82 Cust. Ct. 166, C.D. 4798 (1979), aff'd _____ CCPA ____, C.A.D. 1235 (1979) does not contradict this reasoning. The appellate court here affirmed the lower court's finding that certain radioimmunoassay kits, quite similar to the one considered here, were "more than" "usefully radioactive compounds" provided for in 494.50, TSUS. Each kit contained an antibody, a standard, and a radioactive substance. The parties did not argue, and the court did not consider, 437.76, TSUS, as a possible classification. The court held, alternatively, that these kits were "too diverse", and hence more than, usefully radioactive compounds, and that the kits did not meet the tariff definition for "compound" in Headnote 2(a), Schedule 4, TSUS. If the presence of antibodies and a radioactive substance in one kit makes it too diverse for classification in 494.50, TSUS, then it would seem to follow that the kit is too diverse for classification in 437.76, TSUS. But this inference ignores the legislative history of 437.76, TSUS, and the lack of an equivalent legislative history in 494.50, TSUS. The latter provision lacks the broad intention found in 437.76, TSUS. Antibodies and a radioactive substance in a kit may be too diverse for classification as a "usefully radioactive compound;" but they are not too diverse for classification in a provision that covers products designed for the "prevention, cure, or treatment of diseases or injuries of man." The iodination, which does not change the biological nature of the antibody, serves the same broad function as the antibody. The breadth of the legislative history limits a conventional application of the "more than" doctrine.

069234

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B8

For these reasons, we think the described radioimmunoassay kit is properly classifiable in item 437.76, TSUS, with a free rate of duty.

Sincerely,

DEPARTMENT OF THE TREASURY

FEB 19 1982

CLA-2 CO:R:CV:G
069587 JH

Dear Sir:

Decision on Application for Further Review of Protest No. 3802-1-00074, filed December 29, 1981, on the classification of off-grade methanol.

FACTS:

The methanol was described as a component of dimethyl terephalate which is used in the production of polyester yarn. The methanol is recovered from the polymerization step and purified prior to recycling and re-use. The impure methanol is said to be 95 percent methanol, with 4 to 5 percent water and 1 percent ethylene glycol.

ISSUE:

Whether the off-grade methanol is considered a waste in item 793.00, Tariff Schedules of the United States (TSUS), or is classifiable as methanol in item 427.97, TSUS.

LAW AND ANALYSIS:

It is argued that the off-grade methanol is unsuitable for use in the production of the yarn and in many other applications and, therefore, because of the impurities it should be considered a waste.

For tariff purposes, the classic definition of "waste" is a term which includes manufactured articles which have become useless for the original purpose for which they were made and fit only for remanufacture into something else. Waste includes a refuse, surplus, and useless stuff resulting from the manufacture or manufacturing

B10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

processes, and is commercially unfit, without remanufacture, for the purposes for which the original material was suitable. Harley v. United States, 14 Ct. Cust. Appls. 12.

Also a "waste" was considered by the court to be a material which has ceased, through some change, to serve its original purpose or to be what it originally was. It has neither the characteristics of the raw material nor of the finished product and is unsuited for the purposes of either in its imported condition. (C.D. 1129).

If it is "waste" of any kind, the court said in another opinion, it must be fit under that part of the definition which covers "manufactured articles which have become useless for the original purposes for which they were made and fit only for remanufacture into something else." (C.D. 4343)

The methanol in question is of 95 percent purity. Although this may be impure for the particular polyester yarn application involved, the question is whether the methanol itself is no longer suitable as methanol without further processing. A methanol of 95 percent retains the characteristics of methanol and remains suitable for many applications.

HOLDING:

Methanol of approximately 95 percent purity is not a waste but is classifiable as methanol in item 427.97, TSUS.

You are directed to deny the protest in full.

Dear [redacted]

We have reviewed the additional evidence concerning the classification of Tryglycol Dimercaptan (DMDO), which you submitted with your letter of February 4, 1982.

We remain of the opinion that the chemical remains classifiable in item 428.47, Tariff Schedules of the United States, a provision for other ethers of polyhydric alcohols. If you have any additional information you may wish to submit, we would be happy to consider it.

Sincerely,

B13

15 JUL 1982

CLA-2 CO:R:CV:G
069643 JH

Dear Sir:

Re: Reconsideration of Internal Advice 151/81 - Classification of Triglycol Dimercaptan (DMDO)

The original decision in this case (069107) (November 18, 1981), concluded that as the compound was both an ether and thiol for tariff purposes, following Headnote 1, Part 2(D), Schedule 4, Tariff Schedules of the United States (TSUS), it was classifiable in the first functional group which described it in the tariff. Accordingly, DMDO was classifiable under the provision for ethers in item 428.47, TSUS.

It is now contended that as certain recognized technical authorities regard DMDO as a thiol or mercapton, it should be classifiable in item 429.60, which includes thiols. Item 429.60 does not have an "eo nomine" provision for DMDO. The product description in the item refers to a class of compounds, "thiols," but does not list DMDO by name. Even though it may be regarded by some chemical authorities as a thiol, Customs is bound by the pertinent headnote definitions in classifying the imports in that particular section of the tariff. Headnote 1, Part 2(D), specifically states that any organic compound which is described in more than one functional group is classifiable in the first group in which it is described. There is no doubt that DMDO is first described in item 428.47, which describes polyhydric alcohols, (including glycols, polyglycols, dials, and polyols), and esters, ethers, and ether-esters and substitute derivatives of any of the foregoing.

The cases cited by the petitioner it is believed can be distinguished. In C.D. 4053 the court noted that the compound before it was among other descriptions an ether but the fact was not relevant in the issue since neither the plaintiff nor the defendant had raised it. In another case cited, C.D. 3758 classification of thioacetic as an acid in item 425.99 TSUS, follows the procedure described in the headnote, as it is an organic acid and this functional grouping was listed before the sulfur compounds.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

B14

Accordingly even though the thiol may be the only reactive group in the compound following Headnote 1, Part 2(D), Schedule 4, the provisions for ethers is the correct classification, and the original decision in internal advice.151/81 is therefore affirmed.

Sincerely,

(Signed) Arthur P. Schifflin

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC ——

APR 30 1984

CLA-2 CO:R:CV:G
072632 JH

Dear

This is in reference to your brief filed on the second reconsideration concerning the classification of DMDO (Triglycol Dimercapton). The decisions affirm the classification of the compound, following the direction in Headnote 1, Part 2D, Schedule 4, TSUS, under the provision for other polyhydric alcohols and esters, ethers, and ether-esters and substituted derivatives of the foregoing in item 428.47, TSUS. DMDO is technically and chemically both an ether of a polyhydric alcohol and a thiol. Organic compounds under the headnote are arranged according to functional group and the headnote is quite explicit - it is concerned solely with functional groups - so that the ether group has to be considered as well as the thiol. Despite this it is claimed that as the compound is considered a thiol or mercaptan, it should be classifiable under the provision for sulfur compounds, including thiols, in item 429.60. The latest argument maintains that the compound is known in the trade as a thiol, not a hydrocarbon or ether. Customs reliance, it is argued, on Headnote 1, Part 2D, in classifying under the first functional group in which it appears is deemed misplaced as the headnote is considered defective. It is alleged that it is not clear if the approach to the arrangement of the chemicals in Part 2D is based on structure as described in the nomenclature, processes described theoretically or processes actually demonstrated either in the laboratory or commercially. As for DMDO, it is asserted, that ether structures are not as chemically useful as the thiols, so that for Chemical Abstract procedures the thiol is the principle functional group for structural procedure.

However, it should be noted that one of the main purposes of DMDO is the production of crown ethers and without the ether functional groups crown ether could not be made. Rather than under the "first group" it is argued that a compound should be classifiable under the most reactive group. However, Part 2D is not the only place in the chemical schedules in which Congress stated a preferred method of classification. Under Headnote 2(b), Part 1B, Schedule 4, it is stated that a compound with functional groups described in two or more items under items 402.36 or 406.63, inclusive is to be classified in the latest applicable item. For example, 4-acetamido-2-aminophenol, which contains three functional groups will be classified in item 405.12 (amides), rather than in 404.92 to 405.09, inclusive (aminophenols), or in 404.84 or to 404.90 inclusive (amides), or in 403.51 (phenols). It is axiomatic that a statute should not be

C2

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

construed as to impute to the Congress the doing of a useless or vain thing, unless the words will not permit a construction which will give them some effect. Fensterer & Voss (Inc.) v. United States, 12 CCPA 105.

The fact that the tariff does not have a specific definition for "functional group" is not significant. Throughout the tariff terms are used which are not specifically defined for tariff purposes and it is intended that the usual customary or trade definition be employed. A common definition of functional group which is applicable is to be found in Organic Chemistry, second edition, Morrison and Boget, "the atom or group of atoms that defines the structure of a particular family of organic compounds and, at the same time, determines the properties is called the functional group."

A further explanation of the arrangement in Part 2D is to be found in the Tariff Classification Study. As originally setout Part 2D had the superior heading "nitrogenous compounds, and salts thereof, including alkanolamines, amides, amines, cyanohydrins, imides, isocyanates, nitriles, nitroparaffins, and polyamines." In the Fifth Supplemental Report (1963), the superior heading was shortened to the current "Nitrogenous Compounds." The explanation given was that shortening the superior heading to "Nitrogenous Compounds" did not change its scope in any way." Several groups of chemicals have been rearranged and described by structure or functional groups: for example, item 425.10 covers a variety of chemicals containing a triazine ring such as dinitrosopentamethylenetetramine and the herbicide 2-chloro-4, 6-bis (ethylamino)-S-triazine; item 425.22 provides for primary, secondary, or tertiary amides not only of the carboxylic acids but also of other acids such as sulfonic or phosphoric; item 425.40 brings together an important group of closely related compounds such as dicyandiamide, guanidine carbonate and other acyclic amidines. This is another indication it is believed of the intention to arrange the compounds by functional group.

In sum, we see no difficulty in the Congressional intention that where you have a compound with two functional groups, using Headnote 1, Part 2D, the compound must be classified under the first group which appears, which in this case is the etner of polyhydric alcohol in item 428.47. Internal Advice 151/81 and the subsequent decision of July 15, 1982, are hereby reaffirmed.

Sincerely,

CORRESPONDENCE APPROVAL AND CLEARANCE

072632

MAR 16 1982

CLA-2 CO:R:CV:C
069712 pp

Dear [redacted]

This is in reply to your letter of February 12, 1982, concerning antiques and the application of the Textile Category Guidelines in reference to the classification of suits and apparel sets.

Contrary to the information which you received, the Customs Service is not using the Textile Category Guidelines in the five digit classification of articles of wearing apparel. These guidelines are applicable only when determinations for category purposes are necessary. However, Customs import specialists may utilize the guidelines as an aid in the classification of wearing apparel when the common or commercial designation of the articles in question is not readily apparent.

For your information, Customs has prepared a draft Federal Register notice advising the public that the Guidelines will govern the tariff classification of articles of wearing apparel classifiable in Subpart 6F, Schedule 3, Tariff Schedules of the United States (TSUS). This proposed Federal Register notice was prepared in accordance with advice received from the Office of the United States Trade Representative and will not be published until it has been reviewed and approved by both Customs and the Department of the Treasury. Because of the new provisions in the TSUS, we do not believe any changes in practice will result from the application of these guidelines. However, if the use of the Guidelines is approved and it is then determined that one or more practices have developed and that the application of the Guidelines will result in higher duty rates for merchandise subject to a practice, then, of course, Customs will comply with section 313(d), Tariff Act of 1930, as amended (19 U.S.C. 1315(d)).

In Headquarters Ruling 050722, dated April 13, 1979, Legal Determination No. 79-233, this office set out the criteria to be used in determining whether wearing apparel sets are classifiable as entireties. That ruling states that the Customs Service will usually classify wearing apparel sets as entireties if (1) the components are coordinated as to color to the extent that it is obvious that these components were designed and intended to be worn together (2) the components of the set are sold as a unit and not separately, and (3) the components, when joined together, form a new article which possesses a character or use different from that of its parts, or one of the components in the set is so predominant that the other components are merely incidental to that predominant component. See J.C. Penney Purchasing Corp. v. United States, 77 Cust. Ct. 43, C.D. 4671 (1976). We have contacted our National Import Specialist in New York and determined that they are applying these guidelines.

Suits are generally considered by Customs to constitute a specific type of apparel set which is classifiable as an entirety. Suits, whether designed for wear by women, girls, infants, men, or boys, have a general

069712

RELEASED TO THE

C4

common and commercial meaning as a tailored outfit worn on occasions where some degree of formality is required. To be classifiable as a suit, a wearing apparel set must be composed of a tailored coat or jacket and one or two pairs of leg coverings, usually in the form of pants, but which also may be shorts, a skirt, or a culotte. A vest may also be included in a suit. In regard to men's and boys' suits, all the components of the suit must be predominantly of identical fabric, except in the case of a reversible vest, where only one side of the vest must be of such identical fabric. In the case of women's, girls', and infants' suits, we believe that the common and commercial meaning or understanding of such suits does not require that the components be predominantly of identical fabric. In those instances, the color and pattern of the fabric may be identical or may merely match or coordinate the various components comprising the suit. In all suits, the jacket must have a full front opening and sleeves of any length. In the case of women's, girls', and infants' suits, shells, blouses and other similar garments sold with the other components of the suit would not normally be considered to be part of the suit, but this is a determination which will be made on a case by case basis.

The Customs Service does not believe that the designation "Suits" in the tariff schedules includes such things as athletic uniforms, rain suits, work uniforms, jumpsuits, warm-up suits, bathing suits, or other garments which are loosely referred to as "suits." We have no indication that those types of sets were intended to be encompassed by the term "Suits" nor do we believe that there is a common or commercial acceptance of those articles as suits.

We trust that this is the information which you sought.

Sincerely,

Harvey Fox
Director, Classification
and Value Division

DEPARTMENT OF THE TREASURY U.S. CUSTOMS SERVICE CORRESPONDENCE APPROVAL AND CLEARANCE Form 100 (11-15-73)

28 JUL 1982

CLA-2 CO:R:CV:G
069731 JH

Dear

With your letter of February 17, 1982, you listed numerous chemical compositions, which, if we recall correctly from previous correspondence, are used as wire-drawing compounds and are made in France.

Although you submitted a scheme for expediting the classification of the products, you will appreciate that as we are bound by the tariff laws, we can only base a classification and rate of duty on the tariff. The enclosed classifications of the products we hope will facilitate the matter.

Number	Chemical Composition	TSUS No.	Rate of Duty
4296	65% Fatty ester, 30% Polybutene, 5% Silica	432.10	5% ad valorem
2693	69% Sodium Stearate, 31% lime	432.25	0.6 cent/lb plus 4.4% ad valorem (465.30)
3814	49% Aluminum and Calcium Stearate, 51% lime	432.25	5.4% ad valorem (490.32)
4457	16% Alkanolamide, 24% Amine phosphatester, 5% fatty ester, 6% mineral oil, 0.03% green colorant, 48.97% water	432.10	1.3 cents/lb plus 6.4% ad valorem (465.15)
4393	100% sodium stearate	465.30	0.6 cent/lb plus 4.4% ad valorem
4360	10% Aminoleate, 15% Amine phosphate ester, 2.5% non-ionic surfactant, 2% mineral oil, 70.5% water	432.10	5.4% ad valorem (490.32)

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

Dear Sir:

Internal Advice 44/82 - Classification of PEHA Light Bottoms

FACTS:

The products, referred to as amine bottoms, are described as the by-product residue from the distillation of ethylenediamine, diethylenetriamine, triethylene tetramine, tetraethylenepentamine and pentaethylene hexamine.

A laboratory report states that the material is composed of pentaethylene hexamine and its polymers. It is further described as being reacted without any further remanufacture or separation with polyphosphoric acid producing monomeric and polymeric pentaethylene hexamines phosphonates with a 90 percent yield. The resultant product is said to be used as a scale preventative in oil production.

ISSUE:

Whether the byproduct-residue is classifiable as a mixture of two or more organic compounds in item 430.20, Tariff Schedules of the United States (TSUS), or under the provision for waste or scrap in item 793.00, TSUS.

LAW AND ANALYSIS:

It is claimed that the tariff description of waste would include this material, for even though it is commercially usable, it is felt to be the unsought residue or byproduct of a manufacturing process and no longer suitable for it original purpose.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

C10

Cited in support of this decision is a Headquarter's decision involving the classification of lithium chloride solution as a waste. The lithium chloride solution was found to be an effluent byproduct from a manufacturing process utilizing lithium metal to produce vitamin A. The material imported was described as a tarry substance which contains the lithium which, subsequent to importation, was recovered. Also cited was United States v. David Studner (C.A.D. 990) which involved merchandise described as being useless for its original purpose and sold and used without remanufacture. The material consisted of old, used metal print blocks which were said to be incapable for their original purpose of printing and without remanufacture were sold and used as wall decorations. The court found these to be a waste even though they were used without remanufacture. In both the "lithium case" and the print block case, the materials were, in fact, no longer suitable for their original purposes.

The "effluent byproduct" was imported to recover the lithium. This is an example of the classic situation involving the waste classification. The material itself imported was not suitable for anything but remanufacture or in this case the recovery of lithium. In the Studner case, the print blocks were no longer suitable for printing and the fact that they were utilized without remanufacture for totally new, and unrelated, purpose did not change their waste classification.

The amine bottoms in this case contain pentaethylene hexamine and its polymers. Without any remanufacture or separation, this material is reacted with polyphosphoric acid producing a monomeric and polymeric pentaethylene hexamine phosphonates with a 90 percent yield. Thus the imported product is used in the chemical reaction as imported, it is not used as a source material

069961

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

for the extraction of a constituent part. This is a material which the court in Studner case would characterize as a material which has value for the ordinary or main purpose of manufacture.

The classic definition of waste in the tariff sense involves material fit only for remanufacture into something totally different or a material which is commercially unfit for its original purpose but may be useful in another function. The imported material like many chemical compounds is the source of other chemical products. Without further separation or manipulation of the imported pentaethylene hexamine and higher polymers are reacted directly with other chemicals to produce yet a third chemical product. This is not an unusual way to produce chemicals. The "bottoms" have the characteristics of a chemical intermediate used in the manufacture of phosphonates rather than a waste material. Another example of chemicals produced in this way is the production of acetone produced from cumene. The desired product in this production from cumene is phenol with the acetone being regarded as a byproduct. Not only is the acetone made by this method not a waste, but it is understood that 80 percent of the commerically produced acetone is produced in this manner.

Therefore, the byproduct or "bottoms" in this case do not fit the tariff definition of waste.

Dear

This is in reference to your letter of May 5, 1982, on the dutiable status of methanol when used directly as a fuel. You provide various situations in which methanol was mixed with other chemical compounds, and then inquire how they would be classified.

To begin with, Customs views item 427.96, Tariff Schedules of the United States (TSUS), as an actual use provision. Therefore, methanol imported to be directly used as a fuel would be classified in item 427.96 when used in a direct mixture with gasoline to make gasohol or mixed directly with other chemicals to constitute a completed fuel. However, when it is imported to be mixed with a blending component which may or may not be used as a fuel, this, in our view, is not a direct use. In this regard, your example of methanol mixed with tertiary butyl alcohol, it is understood, it is not a fuel per se and while such a blend may be combined with another component to form a fuel, by itself it is regarded as a solvent. Therefore, methanol blended with such an additive is not automatically regarded as a "direct fuel use."

Methanol used in the formulation of various gasoline additives where such additives constituted a fuel use only, would be considered a direct use for the purposes of 427.96, TSUS.

Methanol used as a pipeline de-icer would not be considered a fuel use, direct or indirect.

If you have any further questions on the subject we would be happy to answer them.

Sincerely,

(Signed) Arthur P. Schifflin

Dear

This is in further reply to your letter of December 5, 1981, concerning the tariff classification of various grades of tungsten carbide powders mixed with as much as 26 percent titanium and cobalt powders. Some of the mixtures also contain tantalum powders. These powders are classifiable under the provision for chemical mixtures, not specially provided for, in item 432.25, Tariff Schedules of the United States (TSUS). Mixtures under that provision are dutiable at the highest rate applicable to any component in the mixture. Based on recent import valuation statistics, we estimate that the 17.5 percent ad valorem rate for titanium powders in item 626.14, TSUS, represents the rate properly applicable to the mixtures in question.

Tungsten trioxide is classifiable under the provision for tungsten compounds in item 422.42, TSUS. The column 1 rate of duty required for this provision is 11.2 percent ad valorem.

We regret the delay in responding to your inquiry.

Sincerely,

(Signed Arthur P. Schiffli

Dear Sir:

Internal Advice 54/82 - classification of dehydrated Culture Media not containing benzenoid dyes or colors.

FACTS:

In general, the merchandise consists of three different types of culture media used in laboratories.

The one type, referred to as laurel tryptose broth, is said to contain tryptose, lactose, sodium chloride, potassium dihydrogen phosphate, sodium laurel phosphate, and dipotassium hydrogen phosphate.

Another type consists only of an mixture of identifiable organic compounds classified in Part 2 of Schedule 4.

The third type consists of identifiable chemical compounds and, in addition, horse or bovine serum.

ISSUE:

Whether these cultures media are classifiable as chemical mixtures or in item 799.00 as nonenumerated articles.

LAW AND ANALYSIS:

The first type mentioned, laurel tryptose broth, since it contains a mixture of organic and inorganic chemicals would be classified as a mixture in item 432.25 Tariff Schedules of the United States (TSUS).

The second type which consists solely of a mixture of identifiable organic compounds classifiable in Part 2 of Schedule 4 would be classifiable as a mixture of two or more organic compounds in item 430.20.

D2

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

As the third type contains not only identifiable chemical compounds but in addition an animal serum, it would be classifiable as a non-enumerated product in item 799.00, TSUS, in view of the inability to completely identify all of the components of mixture.

Sincerely,

(Signed) Arthur P. Schifflin

Dear

We have reviewed the literature you submitted in regard to the tariff classification of "Dairy Aid," "Swine Aid B," and "Poultry Aid B," in the light of the analysis of the samples of the product which you provided.

The three products are similar in composition and are said to be used in controlling barn yard odors and liquifying manure solids. In composition, they are described as being made of extracts of the yucca plant, and an analysis of the sample disclosed the organic components are mainly mixtures of saponins and saponigens.

Products of this type are classifiable as mixtures not specially provided for, in item 432.25, Tariff Schedules of the United States (TSUS), and the rate of duty is 4.4 percent ad valorem but not less than the highest rate applicable to any component material. The component material with the highest rate appears to be saponins, which are classifiable under the provision for other polysaccharides in item 493.68, TSUS. The rate of duty is 7.9 percent ad valorem.

It is urged that these products be classified similarly to the products "Sept Aid," which was classified in item 799.00, TSUS. (060132, February 2, 1979). It is claimed that "Sept Aid" has a formulation identical to the three products above. From a review of that decision, it appears that it was based on the assumption that the chemical composition

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC ——

D4

of "Sept Aid" was not completely identifiable. However, if in fact, it is identical in composition with the three above products, it also would be classifiable as a mixture in item 432.25, TSUS, with the same component rate applying.

Sincerely,

(Signed) Arthur P. Schifflin

Arthur P. Schifflin

DS

8 DEC 1982

CLA-2 CO:R:C:G
070727 JH

Dear:

This is in reference to your request for a ruling on the classification of germanium tetrachloride.

You state that germanium dioxide (GeO_2) is purchased in Russia and made to high-purity germanium tetrachloride in France, Holland, or West Germany.

The production steps taken were outlined as: (1) a chemical transformation of dioxide to the tetrachloride; (2) several purifications steps performed to obtained the high purity desired. The processes are said to involve a reduction of germanium dioxide to the metal and then a chlorination to crude tetrachloride, with a purification accomplished by one or more distillations, followed by extraction. The end product is said to be used in the manufacture of fiber optics.

Germanium tetrachloride is said to be completely different from germanium dioxide. High purity germanium tetrachloride is a colorless, clear liquid that reacts violently with water and fumes when exposed to air, while, on the other hand, germanium dioxide is a crystalline powder that is slightly soluble in water and stable on exposure to air. Germanium dioxide (GeO_2) is said to have a molecular weight of 104.60, and the germanium tetrachloride ($GeCl_4$) is said to have a molecular weight of 214.43.

On the basis of the evidence submitted, it is concluded that these are separate and distinct compounds, with the germanium tetrachloride produced in the manner described resulting from a substantial transformation. Germanium tetrachloride in issue is classifiable under item 423.00, Tariff Schedules of the United States dutiable at 4.5 percent ad valorem.

Sincerely,

(Signed Arthur P. Schifflin

DE CORRESPONDENCE APPROVAL AND CLEARANCE

OCT 26 1983

CLA-2 CO:R:CV:G
070901 PR
803048

[redacted]

Dear [redacted]

This is in reply to your letter of April 29, 1982, addressed to the Regional Commissioner of Customs, New York, concerning the tariff status of two types of imitation leather material.

The first sample is stated to be a product of Belgium and consists of a nonwoven fabric which has been impregnated with polyurethane. One surface of this material has been coated or laminated with a thin layer of nontransparent rubber or plastics material that has been processed to simulate leather. The second sample, which is stated to be a product of Italy, is composed of a layer of woven rayon fabric which has been covered on one side with a layer of expanded plastics material. The top portion of the expanded plastics material has been processed to simulate leather and is nontransparent.

In United States v. Elbe Products Corp., 68 CCPA 72, C.A.D. 1267 (1981), the United States Court of Customs and Patent Appeals held that certain imitation leather materials were classifiable under a provision in Schedule 7, TSUS, which provides for film, strips, and sheets, wholly or almost wholly of rubber or plastics. The basis for the decision is that Headnote 1(vii), to Subpart 4C, Schedule 3, TSUS, which contains the provisions for coated or filled fabrics, states that articles which are specially provided for in Schedule 7 are not classifiable in that subpart. The court reasoned that the visual and tactile properties imparted to the imitation leather material by the plastic portion provides the essential character to that merchandise and, therefore, the merchandise was "almost wholly" of rubber or plastics material, thus specially provided for in Schedule 7. We do not believe that is the case in regard to either sample which you submitted. In the first sample, a layer of nontransparent plastics material provides the visual quality necessary for imitation leather. However, the tactile (feel) quality which is necessary for that merchandise is imparted by the impregnated nonwoven fabric. Therefore, the rubber or plastics material in that merchandise is not considered to provide the essential character to that merchandise. Accordingly, the
